

Cookie Stacker F070

Fully automatic stacking of cookies, creams, biscuits and the like, into pleated paper cups.

Schur's Cookie Stacker is unique within its field. It is a fully automatic machine designed to put cookies, creams, biscuits and the like, into pleated paper cups. This unique packing method, which is used by leading manufacturers of Danish Butter Cookies, ensures maximum protection of the products during transport, and also ensures that the products are exclusively displayed in their retail packaging. The products will thus, after transport, still remain neatly placed in their packaging and will be in perfect condition.

Function

The products coming directly from the oven, are picked up gently and put into the paper cups, which are fed by the machine itself. When the required number of products have been stacked in the cups, the cups continue onto a conveyor.

Some of the advantages of a Cookie Stacker are:

- The use of a vacuum means that each individual product is handled with the utmost care.
- Automatic setting of speed. This means that the speed is always adapted to the number of products being processed.
- Should alternative packing methods be required on occasion, the machine can be disconnected to allow the products to pass straight through the machine.
- The machine is fully automatic, which means that apart from monitoring and quality control, the products are not touched by human hand.
- A robust design means that the machine is well suited to meet the heavy demands of, for example, a treble shift operation.
- Well-known and tested technologies have been used to produce the machine. The machine is therefore today used by leading manufacturers of Danish Butter Cookies.

The Cookie Stacker is the first machine in a unique packing line. This packing line ensures the optimal packaging of cookies, creams, biscuits and the like, from start to finish. The machine can, with advantage, be used together with Schur's other packing machines designed for the baking industry, such as, the Tray,- Box, -Tin Automatic, the Taping Machine, the Cartoning Machine and the Tray and Wrap-Around Packer.

Extra equipment

With the Cookie Stacker, Schur Technology can also offer a cup forming machine which stamps and shapes the pleated paper cups.

Should you have any special requirements we will be pleased to offer you, without any obligation from your side, a project and price for machinery or equipment tailor-made to suit your needs.

Technical Specifications

Model	Cookie Stacker F070
Capacity	30-78 rows./min.
Size range	The machine is adapted to 800 mm and 1000 mm wide band ovens.
Operating voltage	3 x 400 V + N + PE, 50 Hz
Power consumption	Approx. 20 kW
Compressed air connection	Min. 6 bar
Compressed air consumption	Approx. 800 NL/min. at 6 bar.
Vacuum	The machine is supplied with vacuum pumps which are placed in their own rack.
Cup size	Unfolded: dia 5" (dia. = 115 mm) Bottom of pleated cup: dia. 2" (dia. = 51 mm)
Number of cookies per cup:	3, 4 or 5 as pre-selected.

NB: We reserve the right to change technical specifications without notice.
