# Nally Megabin. Original & Low Height.

**For more than 40 years, when it comes to the best end-to-end solution for your fresh produce, our Nally Megabin has been the pick of the bunch.**

## A new generation of premium Megabins

But we're about to add a whole new chapter to the Megabin story. Welcome to our exciting new, lowered height Nally Megabin and Folding Bin ranges.

The release of the new generation Nally Megabin 440 and 580, designed with lowered bin heights, now offers superior protection for your delicate fruit produce.

This, coupled with the critical support of our exceptional Supply Chain Solutions, and the choice of multiple ownership or rental options on a weekly or monthly basis, makes the new generation of Nally Megabins the way forward for the future.

## The Nally Megabin: The original and the best

Made by Pact, leaders of the Circular Economy, the original Nally Megabin was specifically created to suit the needs of Australian farmers, providing premium storage and protection for your fresh produce.

Today the Megabin 780 continues to be the industry standard for innovative bin design and high quality construction from 100% recyclable materials.

# Nally Folding Bin. A new story unfolds.

**An innovative new initiative for the next generation of Nally Megabins, is our space saving folding bin, cleverly designed for the walls to fold down and collapse on each other.**

You have the choice of several design options, including full or half vented sides, solid base, and single or multiple drop doors to ensure you can load or unload the bin safely.

Built to offer a load capacity over 550kgs, and designed to reduce damage to your produce and improve sustainability, the fully recyclable Folding Bins from Pact, is a smart choice.

The Nally Folding Megabin is designed for national logistics operations and is perfectly suited to our asset pooling operations with track & trace technology.

Engineered and Made in Australia, the Nally Megabin range has been developed in collaboration with industry partners and built on decades of experience.

# The Nally Megabin Difference

**Lightweight and safe to handle**  
Efficient to move and transport. Unique interlocking foot design makes bin easy to align, stack, and store.

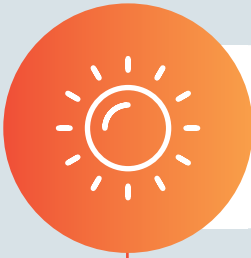

**Rounded corners and smooth interior surfaces**  
Means less bruises, scuffs, abrasions, and cuts to produce.

**Traceability and Bin Security**  
Identification methods include Barcodes, RFID, Custom Branding and Sequential Numbering.

**Hygienic & Easy to Clean**  
Smooth, nonporous surfaces are easy to sanitise and won't trap debris, breed bacteria, or absorb chemicals like timber bins.

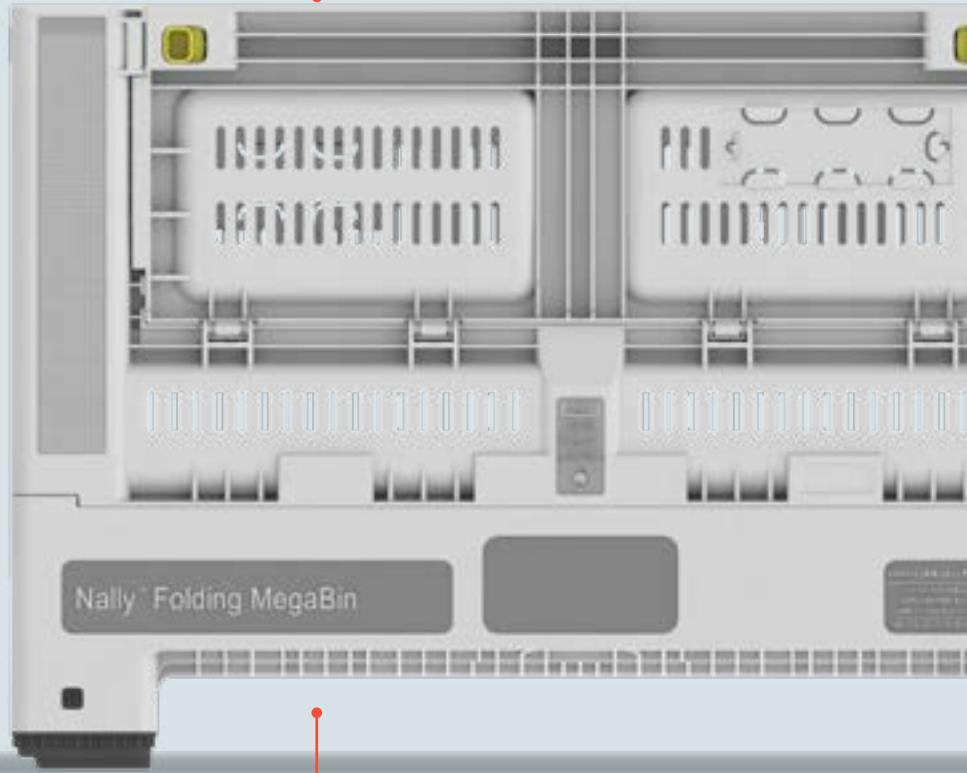

**UV Stabilised**

UV Stabilised and robust to withstand extreme Australian conditions with a proven long life expectancy.

**Multiple ventilation slots for superior air and water flow**

Helps cool down produce faster and extend its shelf life. Available in 6mm and 10mm profiles.

**100% Stack Compatibility**

Designed to be compatible and interchangeable with the existing Nally Megabin Range.

**Automation**

Compatible with the Standard Australian Foot Print, Bin Tippers, Washing Equipment, Farm Machinery and Automation.

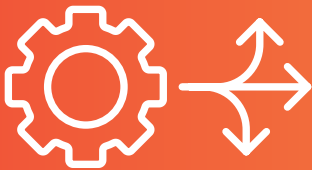

# Flexi-Ownership: Asset Pooling Solutions

**Our flexible ownership model enables you to either purchase a Nally Megabin outright, hire bins or be part of an Asset Pool.**

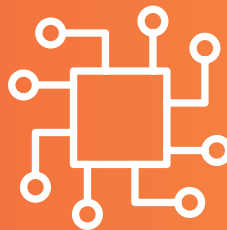

As leaders in Asset Pool management with an existing network of Reusable Folding Crates and national washing facilities, we can tailor a solution to meet your needs. Our pooling network includes Viscount Pooling Systems (VPS) and uses the most advanced technology to ensure supply chain efficiency.

# Track and Trace: your own Megabin detective

One of the most important benefits of our Megabin range, is the fact we offer the only bins on the market with an inbuilt QR Code Track and Trace system. That means we know exactly where your produce is at any given time as well as where it's been and how it's tracking.

Our **Genius Tag™**, with a self powered RFID chip with GPS, tracks events throughout the journey of your bin along the supply chain, mitigating the risk and liability of asset management.

**Genius Tag™** offers an extremely accurate and cost effective solution to detect and protect your produce. It can alert for temperature violations, or unauthorized movement in the bin and then at the end of the chain, give a fully comprehensive report on the temperature, stock and movement history.

So what you are getting is a unique and transparent Track and Trace system to provide premium protection for your produce along the it's supply chain journey.

## Our Track and Trace system:

Validates movements from site to site

Reduces food waste and losses through temperature monitoring

Improves administration - stocktakes and reconciliations

Resolves disputes - missing transfers, damages, loss equipment

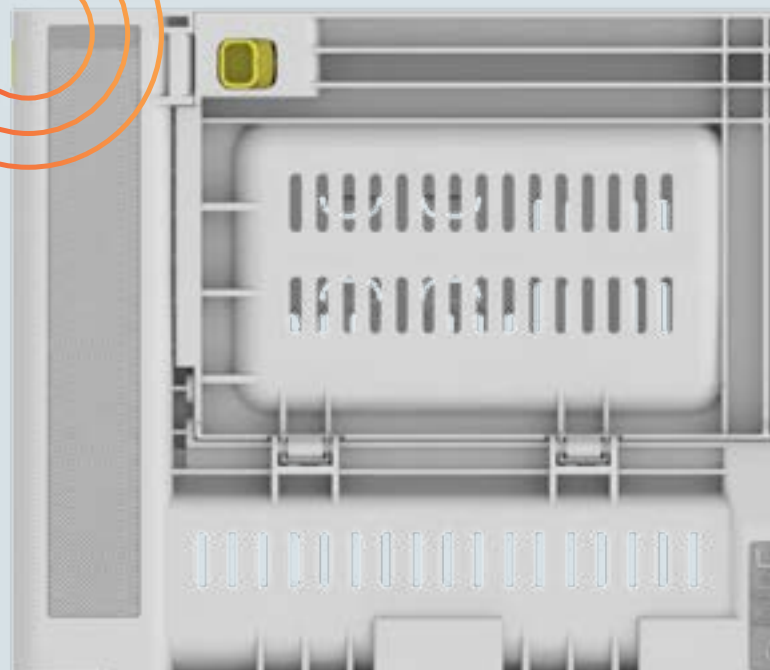

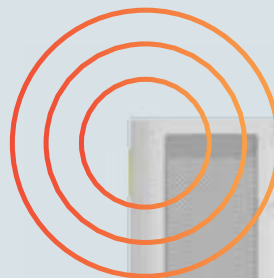

Monitors for damaged bins

Reduces cycle times by understanding delays in the supply chain

Optimises supply chain, saving energy to reduce carbon footprint

Genius Tag™

# Protect your produce with a Nally Megabin.

More than just a great product, Pact Nally Megabins save you time and money through our end-to-end Supply Chain Solutions.
