ESI Scholer Quality Assurance Statement

Our company is set-up for Quality assurance with systems and procedures in place. We are not formally accredited. Due to our structure, this was not considered sustainable.

Many of the welding and quality procedures we have in place and are using, maintain and ensures consistent supply of the high-quality product we provide.

Testament to this is the documentation we provide to our clients.

- POIP (Project overview inspection plan)
- Design plan (internal)
- Client final sign off on general assemblies
- Manufacturing Test and inspection plan
- Inspection by our engineers of all subcontractors involved.
- Weld test check and needing approval
- Checking and sign of certificates from the above in the project plan.
