## **VASCULAR ACCESS PRODUCTS**

Achieve fast, safe, and effective  
intraosseous access in 10 seconds or less!

**Achieve fast, safe, and effective intraosseous access in 10 seconds or less!**

**No batteries. No assembly. No extra parts.**

**With a 98% success rate<sup>1</sup>, remarkable ease of use, a 5-year shelf life, and an all-in-one design that is safe and sterile, the NIO is intraosseous access reinvented.**

NIO INFANT™

NIO PEDIATRIC™

NIO ADULT™

NIO 4™

## Clinically Proven Success

### **SAFE ON THE BONE<sup>2</sup>.**

The NIO has proven to be safe on the bone and resulted in zero incidents of bone fracture as observed by post-insertion x-rays.

### **TOLERATES COMMON USER ERRORS<sup>3</sup>.**

A recent study evaluated common user errors related to placement and found that even when placed up to 5cm from the correct insertion site, the NIO maintained an 85% success rate.

### **FIRST ATTEMPT SUCCESS RATES AS HIGH AS 98%<sup>1</sup>.**

Initial studies demonstrated an overall average success rate of 91.3% for the proximal tibia and 93.1% for the humeral head. The New York Institute of Osteopathic Medicine conducted an additional study which established a proximal tibia success rate of over 98%<sup>1</sup>

- FASTER THAN DRILL-BASED DEVICES
- SHELF LIFE OF THE WNIO VS OTHER DEVICES= 5YRS VS 3YRS
- NIO: ONE SIZE FITS ALL | 98% SUCCESS RATE\* VS TIBIA HUMERUS BARIATRIC DRILL: NEED TO SELECT NEEDLE BASED ON LOCATION OF PROCEDURE WHICH COST VALUABLE TIME.

Next-Generation IO™

## NIO AGE GROUP

newborn – 3 years old  
(36 gestational age and 2.3kg)

### PROXIMAL TIBIA ACCESS SITE:

Locate tibial tuberosity and extend patient's leg. Insertion site is approx. 1cm medial to the tibial tuberosity, or just below the patella (approx. 1cm or one pinky finger width) and slightly medial (approx. 1cm or one pinky finger width), along the flat aspect of the tibia. Use your non-dominant hand to hold and stabilize the limb. Pinch patient's tibia between your fingers to identify the medial and lateral borders and locate the center.

NIO Infant \*

3-12 years old

### PROXIMAL TIBIA ACCESS SITE:

This device features locating arrows which aid in access site landmarking.

To operate, place the designated locating arrow (R for right leg, L for left leg) on the prominent aspect of the tibial tuberosity, aligned parallel to the long axis of the tibia. Locating arrows should be pointing up towards the patient's knee.

Age	Proximal Tibia
3-9 years	14mm
9-12 years	Adjust to 18mm

NIO Pediatric \*

12 years and above

### PROX. HUMERUS ACCESS SITE:

Adduct patient's arm with hand over umbilicus. One hand bisects the arm at the deltoid, while the other hand bisects the axilla anteriorly. Rotate hands inward until the thumbs meet. Palpate the surgical head of the humerus with your thumbs, then move 1cm (0.5in) upward to the greater tubercle.

### PROX. TIBIA ACCESS SITE:

A: Tibial tuberosity  
B: 2cm (1in) medially, towards inner leg  
C: 1cm (0.5in) superior, towards knee

NIO Adult \*

Note: Prior to deploying the **NIO Pediatric** ensure that the penetration depth indicator correlates with the patient's age. For 3-9 year olds, leave the red spacer intact. **For 9-12 year olds, remove the red spacer.**

### STABILIZE

With your non-dominant hand, hold the NIO by the textured dots at a 90° angle to the access site and maintain downward pressure.

### UNLOCK

Unlock the NIO by rotating the cap 90° in either direction, so that the cap aligns with the trigger wings.

### PRESS

Place the palm of your dominant hand over the cap of the NIO and apply downward pressure while your non-dominant hand stabilizes the NIO against the patient's skin.

### SQUEEZE

With your dominant hand, maintain downward pressure on the cap and squeeze the trigger wings.

The NIO Infant™ is indicated for patients between gestational age of 36 weeks, with a weight of at least 5lbs (2.3kg), to patients up to 3 years of age.

**NIO Infant™**

# Vascular Access in a Flash

The NIO Infant™ provides safe, rapid intraosseous access in the proximal tibia as an alternative to IV access in emergency medical situations. The NIO Infant is a manual IO device with an innovative Stepped Needle® safety design that provides graduated penetration into the bone marrow cavity to help prevent over-penetration.

The NIO Infant is ready to use out of its packaging. The device requires no batteries, no assembly, and no extra parts, allowing for rapid vascular access to be achieved.

- **Lightweight, ergonomic handle**
- **Manually control penetration**
- **Prevent over-penetration**
- **Prevent dislodgement**

SPECIFICALLY DESIGNED FOR INFANTS

01. NIO Infant™ individual  
peel back blister pack with  
fixation dressing

SKU.....	NIO-I
Weight .....	56g
Packaging .....	Packed individually in a peel back blister pack with fixation dressing
Safety Mechanism .....	Stepped Needle® 14G to 18G
Needle Gauge .....	18G
Needle Effective Length .....	15mm (0.6in)
Needle Penetration Depth....	The cannula cortex penetration section (18G) is 2.6mm (0.1in)
Shelf Life* .....	5 years*

# Specifications

Specifications are subject to change without notice.

\*From date of manufacture

STEPPED NEEDLE

**Stepped Needle provides sensory feedback in the form of resistance to the user, indicating that the needle is properly positioned in the bone marrow cavity, thus helping to prevent over-penetration**

# Vascular Access in a Flash

1800 628 881 | SALES@AEROHEALTHCARE.COM | AEROHEALTHCARE.COM

HEALTHCARE | WE MAKE IT BETTER

The NIO Pediatric™ is intended for pediatric patients ages 3-12 years old. It features adjustable needle penetration depth according to a patient's age.

# ■ NIO™ Pediatric

*Quick, Safe, Easy Vascular Access*

When you need immediate vascular access, you can be confident that the NIO™ Pediatric is complete and ready to use. The NIO Pediatric is the quickest, most reliable intraosseous device for gaining immediate vascular access in pediatric patients.

The NIO Pediatric™ is an automatic intraosseous device designed for quick, safe, easy vascular access in **10 seconds or less\***. The NIO Pediatric is compact and requires **no assembly**, making it ideal for use in both pre-hospital and hospital settings.

The NIO Pediatric is intended for pediatric patients ages 3-12 years old. Its needle depth may be changed according to the age of the patient by adjusting the needle stabilizer located at the base of the device. The needle stabilizer has protruding arrows that assist in the correct anatomical placement of the device, using the tibial tuberosity as a landmark.

# PRODUCT HIGHLIGHTS

## QUICK

## SAFE

## EASY

Semi-automatic, self-contained unit facilitates rapid vascular access. Unexposed needle decreases the risk of accidental needle injury. Redundant safety features prevent accidental activation of the device.

- ADJUSTABLE ACCORDING TO PATIENT AGE
- REDUNDANT SAFETY FEATURES
- SEMI-AUTOMATIC DEVICE
- NO EXPOSED NEEDLE
- SINGLE-USE DEVICE
- 5-YEAR SHELF LIFE
- SELF-CONTAINED

**The NIO Pediatric features an innovative stabilizer hub which serves four functions:**

- **Unique location arrows** aid insertion site identification
- **Needle stabilizer** assists in securing the needle to the limb.
- **Adjustable needle penetration depth** means one device can accommodate a wide range of pediatric patients
- **Mechanical stopper** limits needle depth, preventing over-penetration.

# PRODUCT HIGHLIGHTS

**DURABLE****QUICK****SAFE****EASY**

The NIO+ is ultra-compact—multiple devices can be stored in a small medical pouch—making it a practical solution for emergency situations. The NIO+ features a reinforced polymer core, which resists elevated thermal temperatures, enabling the device to operate in extreme environments.

- COMPACT AND DURABLE PACKAGING
- SEMI-AUTOMATIC DEVICE
- PROVEN DURABILITY IN EXTREME TEMPERATURES
- NO EXPOSED NEEDLE
- VASCULAR ACCESS IN 10 SECONDS\*
- SINGLE-USE DEVICE
- MOST COST-EFFECTIVE IO SOLUTION
- FULLY ASSEMBLED

\* Comparison of NIO and EZ-IO intraosseous access devices in adult patients, 2016

**The NIO+ has all the features of the NIO Adult™ but with the upgraded benefits of compact, durable design proven to work in and withstand extreme conditions. Ideal for emergency rescue situations and for use by the military.**

# Unmatched IO Simulation Experience
