

Direct Heating Incubators

ZXDP-B2080

Descriptions:

ZXDP-series direct heating incubators offer an economical incubation method to a variety of micro-organism cultures. As a standard feature, all incubators have a high-tech microprocessor controller that maintains accurate temperature control (PID) of the chamber in the range of ambient +5°C to 65°C. With an accuracy of $\pm 0.1^{\circ}\text{C}$, a user-friendly sealed control panel allows easy digital setting and fast readout of time and temperature as well as an alarm signal if there is a deviation from set point parameters. The processor of our incubators can store up to 9 programs-18 steps-into a non-volatile memory. Programs can be used for running multiple "ramp and soak" cycles up to 99 times. Of course the incubators can also be used as a constant (one) temperature incubator.

Features:

- P.I.D. microprocessor ensures the precision of temperature control under both fixed value mode and program mode.
- Fully programmable through the keyboard (9 programs/18 steps).
- Forced-air circulation provides uniformity of $\pm 0.5^{\circ}\text{C}@37^{\circ}\text{C}$.
- Audible and visible alarm on over temperature.
- Password protection against unauthorized access to all settings.
- Non-volatile memory retains preset parameters after an accidental power interruption.
- Large LCD display for easy parameters setting and fast readout.
- Inner glass door provides complete visibility to the chamber.
- Standard 2 grids included
