

HBB-32HPW Electric Hydraulic Rebar Bender

Innovators in
Precision
Hydraulic Rebar
Bending Tools &
Equipment

HBB-32HPW electric hydraulic rebar benders have been specifically designed for rebar work with smaller size material up to 32mm maximum diameter high tensile rebar.

These rebar benders are particularly useful for bending rebar in awkward locations within formwork or on site trench work and are also suitable for straightening rebar then bent thanks to its precision designed push pull operation from the double acting hydraulic system.

Powered by a reliable 230Volt electric motor, these units will perform exceptionally well in tough environmental conditions. This unit is designed & precision manufactured in Japan to the highest of international standards.

Ogura HBB-32HPW Hydraulic Rebar Cutter	
Max. Bending Capacity:	32mm Diameter Rebar
Max. Bending Angle:	90 Degrees
Motor:	230Volt Makita Motor
Weight:	25Kgs

**Boasts a Powerful, Portable & Lightweight Design,
Perfect for Any Work Environment**
