

### Friendly Interface specific for Small Animals

Soft silicon masks come in 3 sizes:

Small mask for small cats, dogs and ferrets

Medium mask for dogs up to 10 kg

Large mask for dogs over 10 kg

### Award winning technology

Flexineb incorporates Nortev's award winning and clinically tested proprietary nebulization technology, which allows medications to be nebulised into a fine particle mist that can be absorbed through the lungs. Particles below 5  $\mu\text{m}$  are absorbed by the lungs. The values below shows typical particle size achieved by Flexineb.

Test Solution	* Dv50 ( $\mu\text{m}$ )	% < 5 $\mu\text{m}$
0.9% Saline	4.14	71

\* Dv50 ( $\mu\text{m}$ ) means 50% of droplets are below this value and 50% are above this value.

Nortev droplet size testing is carried out by independent laboratory @ Melbourn Scientific UK.
