

STAINLESS STEEL AND CARBON STEEL  
PRESS FIT PIPE SYSTEMS

- 316 Stainless Steel System
- 316 Stainless Steel System Gas
- 304 Stainless Steel System
- Carbon Steel System

## PRODUCT AND TECHNICAL MANUAL - v2

*Efficient • Easy • Effortless*

# INTRODUCTION

The EUROPRESS Pressfitting System is an extremely fast and simple assembly system, producing reliable joints with high mechanical resistance, for civil, industrial and naval pipework system installations. Standard diameters range from 15 to 108 mm. Other sizes are available for special applications.

## 1.1 MATERIALS

Depending on the application, the following materials are used:

- stainless steel 316L
- stainless steel 304
- carbon steel

## 1.2 BENEFITS

The main benefits of the Europress System are:

- fast and easy assembly
- reliable, secure and long-lasting seals
- no fire risk during installation
- high corrosion resistance using 316 Stainless Steel

## PRESS CHECK SLEEVES

Europress are at the forefront of pressing systems with the innovative Press check sleeve. Rather than wait to fill an installation with fluid to see if any joint leaks because it has not been pressed, Europress fittings up to and including 54mm have a thin coloured film applied externally on the O ring seat.

When the joint is pressed the film is shredded and detaches from the fitting for easy removal and visual witness to the completed press cycle.

Blue sleeves – Stainless steel

Yellow sleeves – Gas fittings

Red sleeves – Carbon steel fittings

# FEATURES AND BENEFITS OF THE EUROPRES

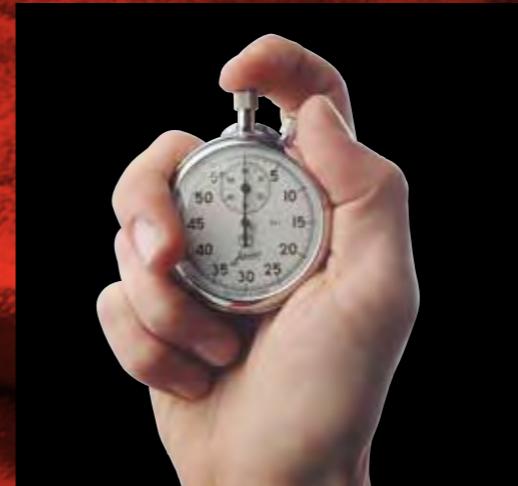

316L polished S/S tubing for a superior finish. High alloy austenitic Cr-Ni-Mo Fittings made from the same high grade 316 S/S with a choice of O-Rings for chemical suitability.

The speed of a pressfit system will amaze you. Competent tradesmen can install a press fit system without the need of qualified welders.

- Faster and Cheaper
- Less time on the job
- Cuts Costs up to 30%

Using Press fittings is up to 10 times faster than conventional Tig welding techniques for stainless steel. No need to completely drain pipe contents prior to alterations. Press Fittings can be crimped wet or dry.

Pressing Tool with inbuilt safety features ensures each press is the same every time, no uncertainty of weld integrity.

25 Year Manufacturer backed product guarantee for all approved applications. Additionally, pressfit tightness is guaranteed by the manufacturer to be in excess of 30 years.

The Europress System is designed for use with common "M" profile Press Jaws, the system is bulk stocked in a number of locations Australia wide and is available through many Plumbing and Industrial outlets.

With the innovative Press Check Sleeve you don't have to wait until the system is full of product to discover leaks! The Press Check Sleeve, makes it easy to immediately identify any joints that have not been pressed.

**NO NAKED FLAME  
NO HOT WORK PERMITS  
NO GAS BOTTLES**  
No fire hazard or heavy installation equipment, makes it easier to comply with OH&S requirements.

## 1.4 THE EUOPRESS PRESSFIT SYSTEM

The Europress Press Fit System is the ideal solution for installing Stainless Steel or Carbon Steel pipework.

Pressfitted pipe joints are fast, easy and risk-free.

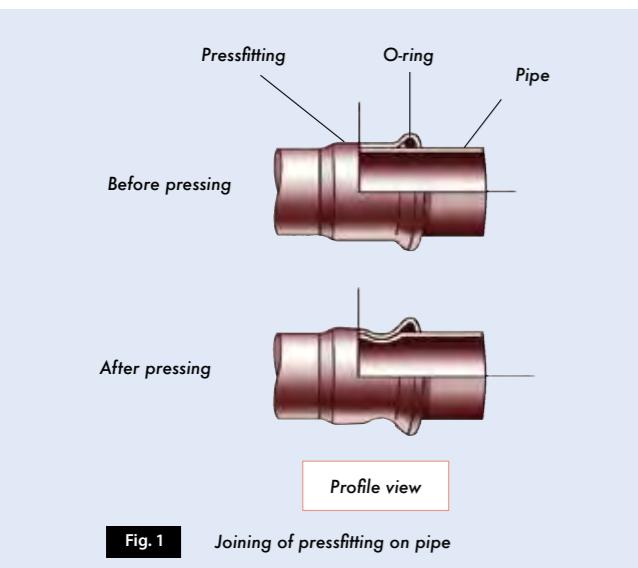

Standard Europress Pipe is available in O.D. tube sizes – **15, 22, 28, 35, 42, 54, 76.1, 88.9, & 108**

This Technical Manual provides basic information as a guide. It remains the responsibility of the user to ascertain the suitability and compatibility with their specific application.

The pipe is pushed into the fitting, up to the stop, then the jaw attachments of the pressing tool press the toroidal end of the fitting into the pipe.

Pressing produces two deformations. The first, radial deformation, compresses the O-ring in the toroidal chamber and guarantees that the pipe is hermetically sealed. The second, geometric deformation of both fitting and pipe, creates a mechanical joint, resistant to slipping and rotation.

The resulting pressing profile varies according to diameter. **Fig 1** shows an assembled joint before and after pressing. Joints produced in this way are extremely strong, but flexible enough to withstand the stresses resulting from initial installation and those, such as vibrations and thermal expansion etc., that occurs in normal operating conditions. This is provided that installation has been carried out according to the instructions in this manual and complies with Australian Standard AS/NZS 3500.1.

## Certifications

The Europress 316L Stainless Steel pipe and standard fittings have been certified for drinking water use by many national and international authorities. Notably it exceeds the demanding quality requirements of the Australian Watermark and the German Standard DVGW W534.

Watermark  
AS 3688  
AS 5200.053  
WMKA22265

Activfire  
AS 4118.2.1  
VdS2344en  
VdS2100-26en

## 2 EUOPRESS STAINLESS STEEL

All 316L pipes and pressfittings are made of austenitic stainless Cr-Ni-Mo steel, n. 1.4404 which conforms to Standard UNI EN 10088 (AISI 316L).

304 grade SS pipe n. 1.4307 is available as a more economic alternative to 316L. The nominal dimension used to identify both components of the joint refers to the outside diameter of the pipe.

### 2.1 PIPES

Pipes for use in mains systems are manufactured to AS 5200.053 and conform to Standard DVGW-GW 547/2004 and are marked as such. Dimensional tolerances conform to Standard EN ISO 1127 D4/T4. These pipes are sold in 6-metre lengths and are capped both ends.

Outside diam mm	15	22	28	35	42	54	76.1	88.9	108	139.7	168.3
Thickness	1	1.2	1.2	1.5	1.5	1.5	2	2	2	2	2

## 2.2 STAINLESS STEEL PRESSFITTINGS

Press fittings are manufactured from the same material as the pipes and conform to AS 3688

The special process used to make the press fittings can be broken down into the following main stages:

- cutting the pipe into sections and mechanical working
- forming the toroidal seat
- any welding of other parts of the fitting
- heat treatment in a controlled atmosphere at 1050°C to restore the material's original characteristics

All process stages conform to Standards UNI EN ISO 9001 and in compliance with related technical specifications from DVGW, VdS, etc.

### 2.3 GENERAL APPLICATIONS

The Europress Stainless Steel system is the ideal solution for drinking water systems as the AISI 316L stainless steel used is completely hygienic and highly corrosion resistant. The standard o-rings made of black EPDM, are resistant to aging, heat and chemical additives and are particularly suitable for all types of treated water.

The reliable, high-quality components are suitable for heating, cooling, compressed air, oil and diesel lines in the civil, industrial and manufacturing sectors.

#### Conditions of use

- Maximum operating pressure: 16 bar
- Operating temperature: -20°C +95°C
- Maximum temperature: 120°C (On approved applications.)
- Up to 40 Bar/580 psi available on approved applications. Please refer to technical department.

The Europress Pressfitting System complies with the CSIRO ACTIVFIRE certification and has been evaluated and verified as conforming to AS 4118.2.1-1995. It also has been granted the internationally recognized VdS-certification for fire extinguisher systems according to VdS CEA 4001 for both carbon steel and stainless steel products 22mm-108mm (DN20-DN100).

### 2.4 GAS APPLICATION

The Europress System meets AS 5200.053 and is approved in Australia, New Zealand and many European countries for use in gas distribution systems, with external above-ground pipes, installed inside or outside buildings. It can be used for all types of combustible gas, both natural and liquid. The O-ring gaskets are made of yellow HNBR, and are compatible with any of the gas varieties used and are resistant to ageing and heat.

#### Conditions of use

- Maximum operating pressure: 5 bar
- Operating temperature: -20 °C +70 °C

#### Certification

The Europress pressfittings comply with AS NZS 5601.1.2013 which requires certification as conforming to the German Standard DVGW VP614 for gas applications. To conform to this standard, each of the welded fittings, complete with o-rings, undergoes a special helium test. These fittings have a yellow label with

the letters "PN5" or equivalent yellow mark, to indicate their application.

## 3. EUOPRESS CARBON STEEL

### 3.1 Pipes and pressfittings

All pipes and pressfitting are made of carbon steel, E195 or E235 n. 1.0034 which conforms to Standard EN 10305.

The nominal dimension used to identify both components of the joint refers to the outside diameter of the pipe.

The following range of diameters and thicknesses can be used:

Outside diam mm	15	22	28	35	42	54	76.1	88.9	108
Thickness	1.2	1.2	1.5	1.5	1.5	1.5	2	2	2

Pipes are sold in 6-metre lengths and dimensional tolerances must conform to Standard EN 10305.

#### Pressfitting

The types of pressfittings available are listed in p 34–43

The special process used to make the press fittings can be broken down into the following main stages:

- cutting the pipe into sections and mechanical working
- forming the toroidal seat
- any welding of other parts of the fitting
- any annealing heat treatments
- zinc surface treatments

All process stages are subjected to a quality certified system conforming to Standard UNI EN ISO 9001/2000.

#### Marking

All Europress pipes and press fittings are stamped in accordance with the relevant standard to indicate their application.

### 3.2 Various applications

The Europress Pressfit System in carbon steel is indicated for use in various types of civil and industrial installations where stainless steel pipework is not essential.

Typical applications are:

- closed-circuit heating and cooling water systems
- compressed air and inert gas systems
- closed-circuit sprinkler systems
- oil and diesel lines.

All applications should be checked with Europress Technical department.

The O-ring gaskets, made of black EPDM, are resistant to ageing, heat and chemical additives and are therefore particularly suitable for all types of treated water.

#### Conditions of use

- Maximum operating pressure: 16 bar
- Operating temperature: -20°C +85°C
- Maximum temperature: 120°C (On approved applications. Please refer to tech. dept.)

## 4 STAINLESS STEEL PRESSFITTINGS

CSP0.054022	50	110	88	190
CSP0.054028	50	100	76	186
CSP0.054035	50	129	102	204
CSP0.054042	50	108	76	210
CSP0.076042	65	149	117	438
CSP0.076054	65	145	108	454
CSP0.089054	80	157	120	596
CSP0.089076	80	157	105	699
CSP0.108054	100	204	167	898
CSP0.108076	100	196	144	980
CSP0.108099	100	192	133	996

### Slip Coupling

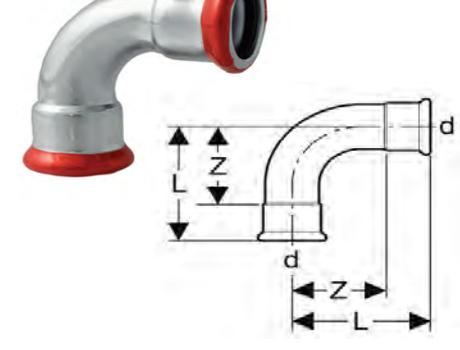

Part No.	DN	L	Z	weight g
CPPS.000015	12	73	24	54
CPPS.000022	20	83	27	82
CPPS.000028	25	92	28	111
CPPS.000035	32	101	31	149
CPPS.000042	40	118	35	212
CPPS.000054	50	142	40	319
CPPS.000076	65	232	60	985
CPPS.000089	80	262	70	1,292
CPPS.000108	100	312	80	1,878

### Elbow 90° R 1.5

Part No.	DN	L	Z	weight g
CPP8.000015	12	41	20	48
CPP8.000022	20	49	26	84
CPP8.000028	25	59	35	120
CPP8.000035	32	72	45	165
CPP8.000042	40	91	59	256
CPP8.000054	50	110	73	386
CPP8.000076	65	150	95	994
CPP8.000089	80	174	111	1,364
CPP8.000108	100	215	138	2,060

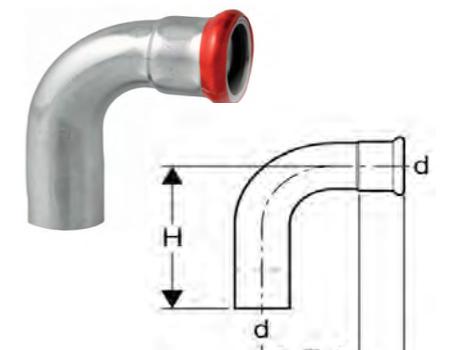

Radius 1.5 is CPP9 (dimensions will change)

### Elbow 90° with Spigot End

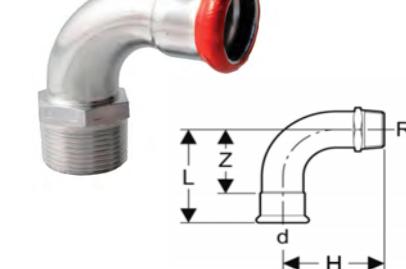

Part No.	DN	L	H	Z	weight g
CPS8.000015	12	41	49	20	58
CPS8.000022	20	49	59	26	98
CPS8.000028	25	59	69	35	147
CPS8.000035	32	72	83	45	179
CPS8.000042	40	91	96	59	260
CPS8.000054	50	110	116	73	400
CPS8.000076	65	150	166	95	982
CPS8.000089	80	174	190	111	1,317
CPS8.000108	100	215	230	138	2,068

Radius 1.5 is CPP9 (dimensions will change)

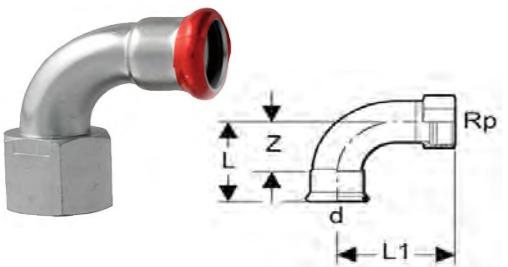

### Elbow Adaptor 90° with Male Thread

Part No.	DN	L	H	Z	weight g
CPM9.015015	12	41	40	20	70
CPM9.022020	20	49	54	26	106
CPM9.028025	25	59	68	35	174

### O-RINGS and FLAT GASKETS

Made of synthetic rubber they guarantee that a joint is hermetically sealed. In no instance can common commercially available O-rings be substituted. Depending on the application, o-rings with the following materials are used:

#### EPDM - black (commonly associated to WATER applications)

The standard material, available in diameters from 15 to 168.3 mm, suitable for temperatures between -20 and +120 °C and for pressures up to a maximum of 16 bar. It has a host of applications and is used for drinking water, heating, cooling, steam, fire fighting, compressed air (oil free) and inert gas systems.

#### HNBR - yellow (commonly associated to GAS applications)

This material is used in gas systems. It is available in diameters from 15 to 108 mm and is suitable for temperatures between -20 and +70 °C and for pressures up to a maximum of 5 bar.

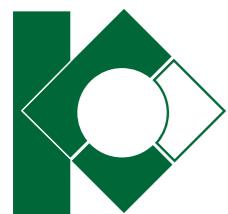

#### FPM – green, coinciding with FKM

This material is used for particularly testing conditions, with temperatures between -20 and + 180 °C and for pressures up to a maximum of 16 bar. It is available in diameters from 12 to 108 mm and is particularly suitable for solar systems. It is not recommended for systems with the presence of steam.

To fully understand the compatibility of the seals with the various types of fluids a brief chemical compatibility list is on page 73. All applications should be confirmed with the Technical department. Temperature, pressure and exact chemical specification needs to be known.

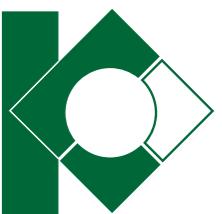

Flat seals are used in barrel union assemblies and as such are subject to multiple deformations when assembling/disassembling unions. The manufacturer recommends that seals are replaced each time the joint is disassembled.

KZL-R.014	Kova rail medium profile	28	14	2m	2
KZL-R.030	Kova rail high profile	28	30	2m	2

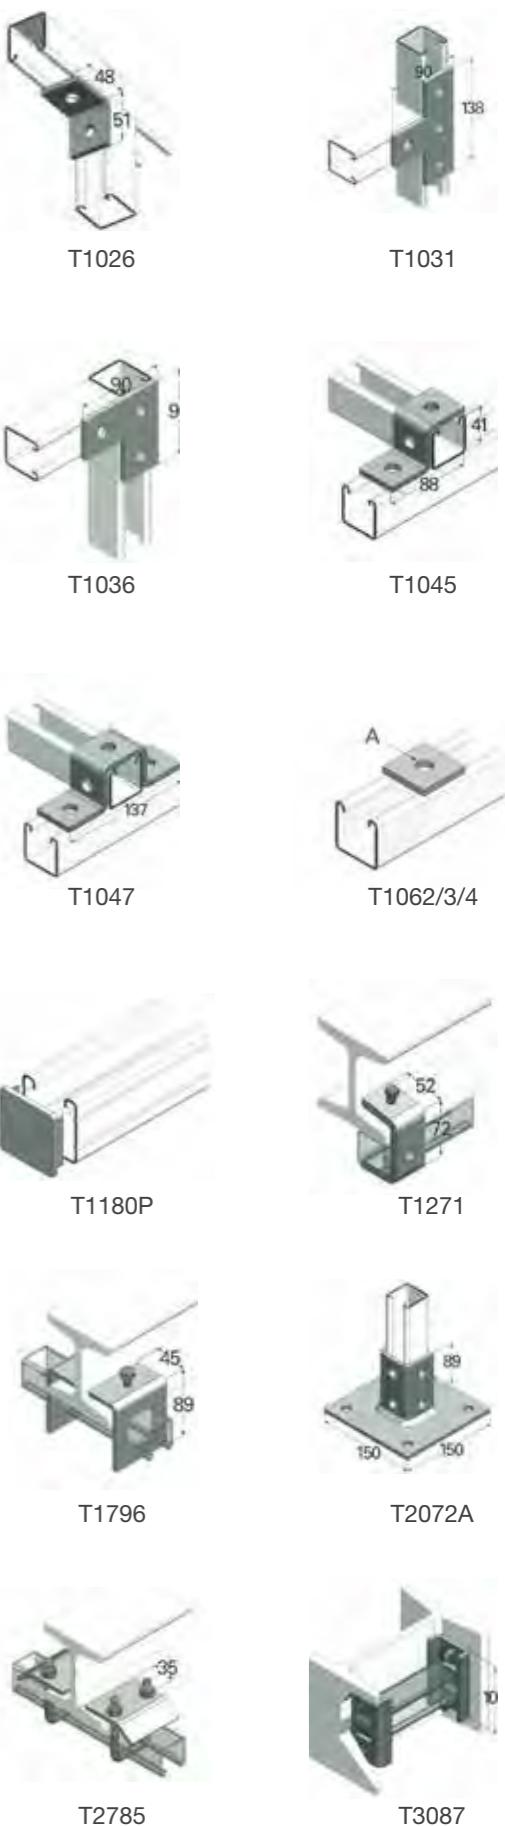

### Angle

Part No.	Description	Width mm	Height mm	Length	Finish
HSEA3030-3	Slotted Angle 3mm	30	30	3m	Galvabond
ALA2016	Aluminium Angle 1.6mm	20	20	6.5m	Aluminium
ALA4016	Aluminium Angle 1.6mm	40	40	6.5m	Aluminium

### Strut Fittings

Part No.	Description	Width mm	Thickness
T1026	Strut Angle Bracket	Galvanised	0.17
T1031	T bracket 4 hole	Galvanised	0.44
T1036	L bracket 3 hole	Galvanised	0.11
T1045	Z fitting 3 hole	Galvanised	0.2
T1047	U fitting 5 hole	Galvanised	0.33
T1062	M8 plate	Galvanised	0.071
T1063	M10 plate	Galvanised	0.065
T1064	M12 plate	Galvanised	0.064
T1065	Joiner 2 hole	Galvanised	0.013
T1067	Joiner 4 hole	Galvanised	0.27
T1068	Angle bracket 41 x 57mm	Galvanised	0.14
T1180P	T2000B Channel end cap	Plastic	
T1271	Beam Clamps	Galvanised	0.47
T1325	Angle bracket 4 hole	Galvanised	0.28
T1326	Angle bracket 3 hole	Galvanised	0.24
T1386	H Beam clamp to strut	Galvanised	0.11
T1796	H beam clamp to strut	Galvanised	0.37
T2072A	Base plate 2 hole	Galvanised	1.5
T2346	Wing fitting HD	Galvanised	0.55
T2452	Angled brace	Galvanised	0.98
T2750	4 wheel strut trolley	Zinc plated	0.43
T2785	U bolt adjustable beam clamp	Zinc plated	0.43
T3087	Internal column bracket	Galvanised	0.84

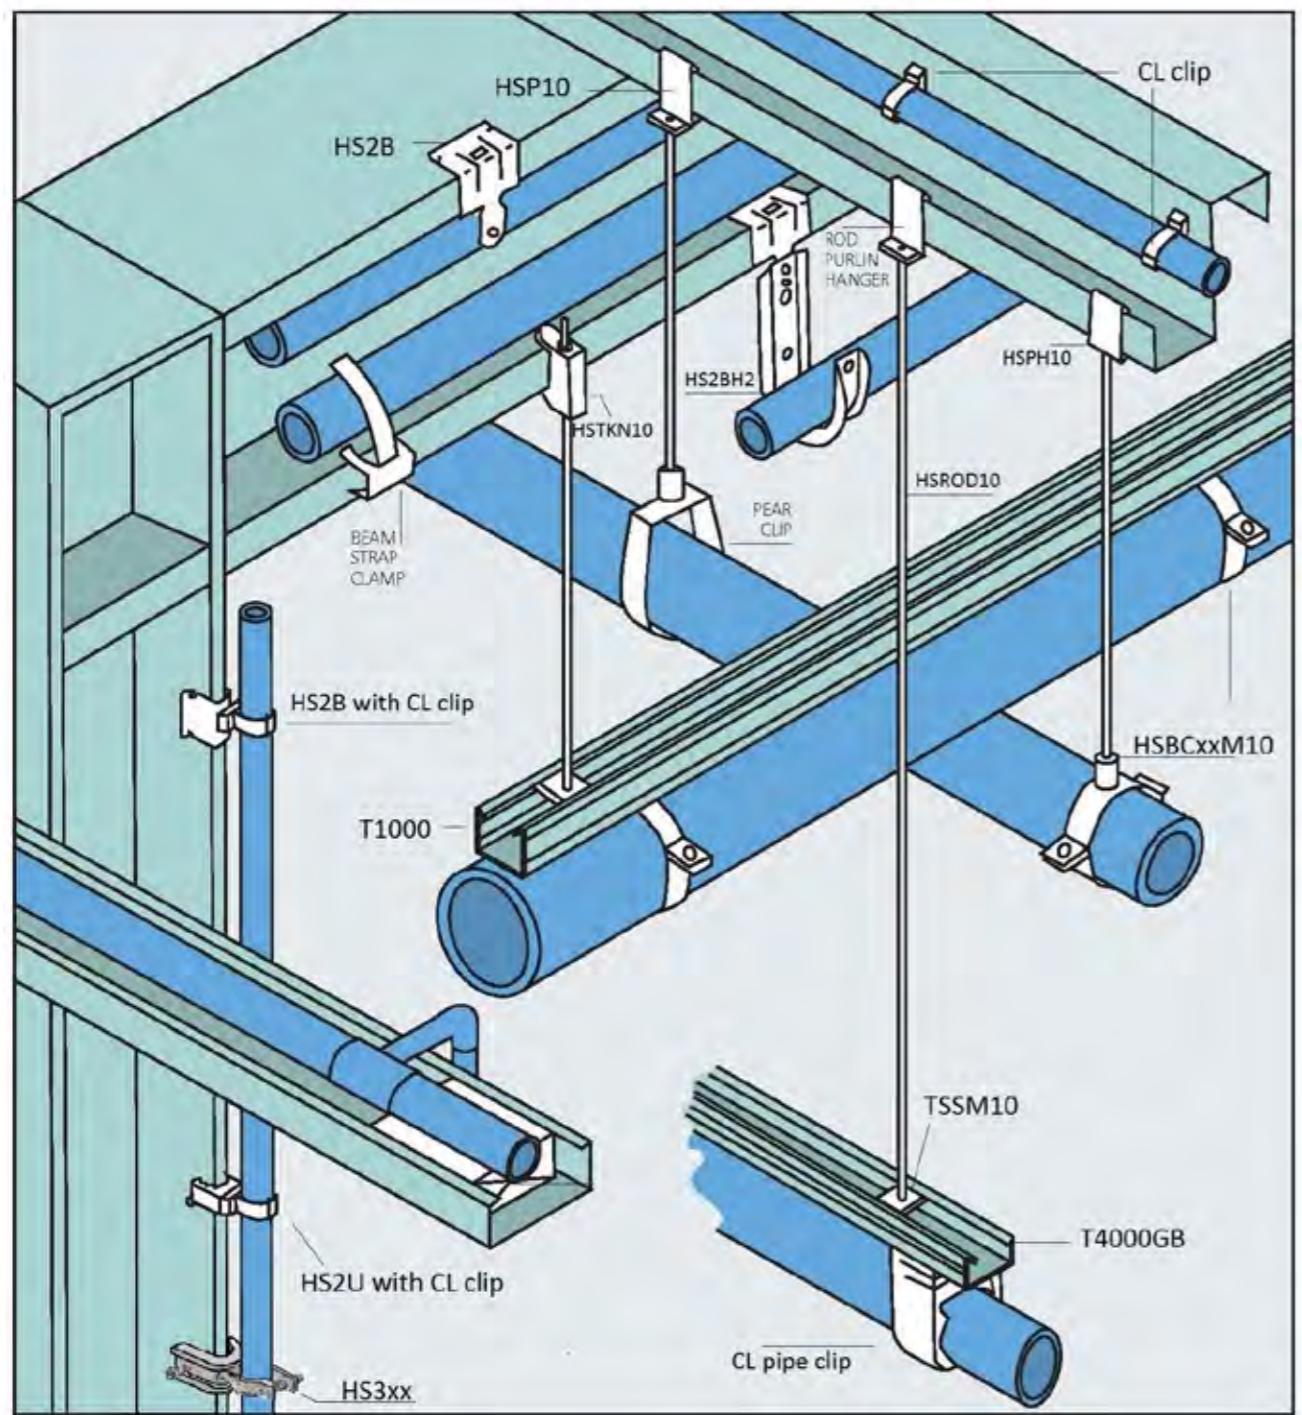

## 8.1 Universal Cantilever Arms, Schematic

### Cantilever Arms

Part No.	Description	Load kg	Weight kg	Finish
TCA150	Cantilever arms 150mm	516	0.63	Galvanised
TCA200	Cantilever arms 200mm	350		Galvanised
TCA300	Cantilever arms 300mm	258	1.03	Galvanised
TCA350	Cantilever arms 350mm	220		Galvanised
TCA450	Cantilever arms 450mm	178	1.42	Galvanised
TCA500	Cantilever arms 500mm	150		Galvanised
TCA650	Cantilever arms 650mm	129	1.81	Galvanised
TCA750	Cantilever arms 750mm	103	2.21	Galvanised
TCA900	Cantilever arms 900mm	86	2.6	Galvanised

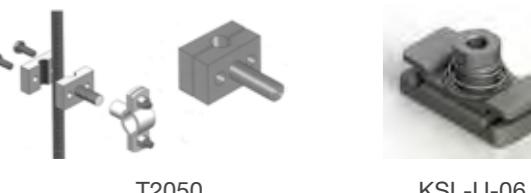

## 8.1 Strut Fittings and Components

**EUROPRESS**  
STAINLESS STEEL  
CARBON STEEL

### Strut Nuts

Part No.	Description	Finish
TSSN06	M6 Strut nut	Galvanised
TSSN06L	M6 Strut nut w long spring	Galvanised
TSSN06L-SS	M6 Strut nut w long spring	Stainless
TSSN8	M8 Strut nut	Galvanised
TSSN8S	M8 Strut nut w short spring	Galvanised
TSSN8L	M8 Strut nut w long spring	Galvanised
TSSN10	M10 Strut nut	Galvanised
TSSN10S	M10 Strut nut w short spring	Galvanised
TSSN10L	M10 Strut nut w long spring	Galvanised
TSSN10SS	M10 Strut nut stainless steel	Stainless
TSSN12	M12 Strut nut	Galvanised
TSSN12S	M12 Strut nut w short spring	Galvanised
TSSN12L	M12 Strut nut w long spring	Galvanised
TSSN12SS	M12 Strut nut stainless steel	Stainless
TSTN10	T-nut – strut nut fitted with M10 thread	Zinc plated
T2050	Threaded rod clamp fits m10 allthread with m10 stub thread	Zinc plated
KZL-N.M06	Kova Rail nuts Light series, plus Twin body group 1, M6	Zinc plated
KSL-N.M06	Kova Rail nuts Light series, plus Twin body group 1, M6	Stainless steel
KZT-N.M08	Kova Rail nuts Twin series body group 2,3, 4 & 5, M8	Zinc
KZH-N.M12	Kova Rail nuts Heavy series body group 4, M12	Zinc
KZL-U.M06	Strut nut adaptor attaches Kova clamps to Universal strut M6	Zinc plated
KSL-U.M07	Strut nut adaptor attaches Kova clamps to Universal strut M7	Stainless steel

### Hanging System Components

Part No.	Description
HS1A	Long purlin clip can mount CL clips
HS2A	Beam clamp 3mm - 7mm Spring steel
HS2B	Beam clamp 8mm - 13mm Spring steel
HS2C	Beam clamp 14mm - 20mm Spring steel
HS2U	Beam clamp spring steel >16mm, suits 6mm bolts or 10mm
HS3	Universal clamp < 17mm beam
HS3-30	Universal clamp < 30mm beam
HS3-45	Universal clamp < 45mm beam
HSP10	Purlin clip for 10mm allthread
HSPH10	Heavy duty purlin clip for 10mm allthread
HSPH12	Heavy duty purlin clip for 12mm allthread
HSJM08	Threaded Rod Hex Joiner M8
HSJM10	Threaded Rod Hex Joiner M10
HSJM12	Threaded Rod Hex Joiner M12
HSN08	Threaded rod nut 8mm
HSN10	Threaded rod nut 10mm
HSN12	Threaded rod nut 12mm
HSTKN08	Beam clamp < 16mm, mounts 8mm threaded rod
HSTKN10	Beam clamp < 16mm, mounts 10mm threaded rod
HSTKN12	Beam clamp < 16mm, mounts 12mm threaded rod
JC2.530	Jack chain 2.5mm 30m bucket
TS2-GW	Heavy duty grey teflon tape 10 m
TS6	Anerobic Thread Sealant 250 ml

## 8.2 Clips

User-friendly single swing bolt design

## 8.3 Promega Strut System

**Link Promega** is a recent additon to the global modular strut systems. This versatile comprehensive bolt together support system is available in:

40x40, 50x50, 80x80, 100x100, 100x120 and 100x150.

The system is stronger & faster to install using the unique self tapping screws into the precise hole patterns

### Link Promega System Components

Part No.	Strut System Size mm	Description
LPAFP045	40 & 50	Flat L Plate 129 x 129
LPAFP080	80 x 80	Angle Flat L Plate 200 x 200
LPAFP100	100 x 100	Angle Flat L Plate 220 x 220
LPB040.3	40 x 40	Beam Section 6m
LPB50.3	50 x 50	Beam Section 6m
LPB080.3	80 x 80	Beam Section 6m
LPB100.3	100 x 100	Beam Section 6m
LPB120.4	120 x 100	Beam Section 6m
LPB150.4	150 x 100	Beam Section 6m
LPBCB045	40 & 50	Braced Corner Bracket 110 x 110 x 26
LPBCB080	80 x 80	Braced Corner Bracket 80 x 140 x 140
LPBCB100	100, 120, 150	Braced Corner Bracket 140 x 140 x 100
LPBCB120	120	Braced Corner Bracket 140 x 140 x 120
LPCB.02	40 & 50	2 Hole L bracket 61 x 61 x 35
LPCB.04	40 & 50	4 Hole L bracket 104 x 104 x 35
LPCB4080	80 x 80	4 Hole Corner Bracket 70 x 70 x 80
LPCB6080	80 x 80	6 Hole Corner Bracket 140 x 70 x 80
LPCB6100	100 x 100	6 Hole Corner Bracket 140 x 70 x 100
LPCBR10080	100 to 80	Reducing Corner Bracket 140 x 100 x 140 x 80
LPCBR120100	120 to 100	Reducing Corner Bracket 140 x 120 x 140 x 100
LPCB040.05	40 x 40 x 500	Cantilever Bracket wall mount 125 x 125
LPCB040.10	40 x 40 x 1000	Cantilever Bracket wall mount 125 x 125
LPCB040.15	40 x 40 x 1500	Cantilever Bracket wall mount 125 x 125
LPCB041.05	40 x 40 x 500	Cantilever Bracket strut mount 70 x 135
LPCB041.10	40 x 40 x 1000	Cantilever Bracket strut mount 70 x 135
LPCB041.15	40 x 40 x 1500	Cantilever Bracket strut mount 70 x 135
LPCB050.05	50 x 50 x 500	Cantilever Bracket wall mount 125 x 125
LPCB050.10	50 x 50 x 1000	Cantilever Bracket wall mount 125 x 125
LPCB050.15	50 x 50 x 1500	Cantilever Bracket wall mount 125 x 125

LPEXC050	50	Extension Coupling external joins 2 lengths 50 x 50 x 200
LPEXC080	80	Extension Coupling internal joins 2 lengths 70 x 70 x 367
LPEXC100	100	Extension Coupling internal joins 2 lengths 90 x 90 x 367
LPEXC120	120	Extension Coupling internal joins 2 lengths 110 x 90 x 367
LPEXC150	150	Extension Coupling internal joins 2 lengths 140 x 90 x 367
LPJP8100	100 x 100	8 Hole Joiner Plate clamps 2 adjoining beams 140 x 200
LPKB040	40 x 40	Beam Clamp LP strut to underside of I beam
LPKB050	50 x 50	Beam Clamp LP strut to underside of I beam
LPKB080	80	Beam Clamp LP strut to underside of I beam
LPKB100	100	Beam Clamp LP strut to underside of I beam
LPKB120	120 x 100	Beam Clamp LP strut to underside of I beam
LPKB150	150 x 100	Beam Clamp LP strut to underside of I beam
LPPJB40	40 x 40 x 125	Pivot joint Base floor mount

### Link Promega System Components

Part No.	Strut System Size mm	Description
LPPJB50	50 x 50 x 125	Pivot joint Base floor mount
LPPJB100	100 x 100 x 250	Pivot joint Base floor mount
LPPJS040	40 x 40	Pivot Joint Strut mount
LPPJS050	50 x 50	Pivot Joint Strut mount
LPPJS080	80 x 80	Pivot Joint Strut mount
LPPJS100	100 x 100	Pivot Joint Strut mount
LPQN10	M10	Quick Nut zinc plated
LPQN12	M12	Quick Nut zinc plated
LPQS10.30	M10 x 30	Quick Stud zinc plated
LPQS10.70	M10 x 70	Quick Stud zinc plated
LPSA80	80	Strut Adapter mounts universal strut to LP post
LPSA100	100	Strut Adapter mounts universal strut to LP post
LPSFS10	10	Self Forming Screw M10
LPTFP045	40 & 50	Tee Flat Plate Fitting 106 x 127
LPTFP080	80 x 80	Tee Flat Plate Fitting 300 x 80 x 80
LPTFP100	100 x 100	Tee Flat Plate Fitting 300 x 100 x 100
LPTS1055	10 x 55	zinc plated threaded stud
LPTS10100	10 x 100	zinc plated threaded stud
LPTY.040	40 x 40	Branch support Tee
LPTY.050	50 x 50	Branch support Tee
LPUB4.1540	15-40 tube	U Bolt Support Bracket suits 40
LPUB4.5075	50-75 tube	U Bolt Support Bracket suits 40
LPUB4.75125	75-125 tube	U Bolt Support Bracket suits 40 (needs 2)
LPUB4.160300	160-300 tube	U Bolt Support Bracket suits 40 (needs 2)
LPUB5.1540	15-40 tube	U Bolt Support Bracket suits 50
LPUB5.5076	50-75 tube	U Bolt Support Bracket suits 50
LPUB5.75125	75-125 tube	U Bolt Support Bracket suits 50 (needs 2)
LPUB5.150300	150-300 tube	U Bolt Support Bracket suits 50 (needs 2)
LPUB1540	15-40 tube	U Bolt Bracket 80,100,120,150
LPUB5075	50-75 tube	U Bolt Bracket 80,100,120,150
LPUB75125	75-125 tube	U Bolt Bracket 80,100,120,150 (needs 2)
LPUB150300	150-300 tube	U Bolt Bracket 80,100,120,150 (needs 2)
LPUS040	40 X 40	U Shape Bracket cross beam to upright
LPUS050	50 x 50	U Shape Bracket cross beam to upright
LPUS080	80 x 80	U Shape Bracket cross beam to upright
LPUS100	100 x 100	U Shape Bracket cross beam to upright
LPUS120	120 x 100	U Shape Bracket cross beam to upright
LPUS150	150 x 100	U Shape Bracket cross beam to upright

## 9.1 PRESSING TOOLS

The pressing process is achieved using pressing tools with a range of jaw attachments that vary according to the fitting and pipe diameters.

Various types of pressing tools are commercially available:

- **electromechanical tools**, either battery or mains-powered versions (18V or 240 V), may be used for the full range of diameters.
- **electrohydraulic tools** are used primarily for larger diameters, from 76.1 to 168 mm.

The Europress System can be used with a wide variety of pressing tools, provided that these are equipped with Europress approved "M"-profile jaws. Please refer to the technical department to ensure the proposed presstool is suitable for the Europress system.

### Features and benefits common to all these 3 Klauke models below

- LED display of tool information
- LED light illuminates workpiece
- "Quickstop" function for extra safety
- "Autostop" extends battery and tool life
- HPC monitoring gives precise press force
- Jaws rotate approx 350° for max access
- 2 component grip
- Automatic piston return
- Ergonomic design
- Mains power option

## Press tools, press heads, jaws, chains and adaptors

Press tools TB02, TB05 and TB08 come complete with carry case, battery and battery charger as pictured.

Press heads are sold separately as required.

Item No.	Description	Sizes	Weight
TB02	Compact one-hand press tool	15, 22, 28	2.3kg
TB05	Balanced pistol style press tool	15, 22, 28, 35, 42, 54	3.5kg
TB08	Balanced pistol style press tool	15, 22, 28, 35, 42, 54, 76, 89, 108	2.3kg

Part No.	Description	To Suit
MK015	15mm Jaw Mini	Mini TB02 Crimping Tool Only
MK022	22mm Jaw Mini	Mini TB02 Crimping Tool Only
MK028	28mm Jaw Mini	Mini TB02 Crimping Tool Only

Part No.	Description	To Suit	Comments
MJ015	Ø15mm Jaw	TB05 & TB08	
MJ022	Ø22mm Jaw	TB05 & TB08	
MJ028	Ø28mm Jaw	TB05 & TB08	
MJ035	Ø35mm Jaw	TB05 & TB08	
MC042	42mm Pressing Chain	TB05 & TB08	Requires TA054 Adaptor
MC054	54mm Pressing Chain	TB05 & TB08	Requires TA054 Adaptor
TA054	42/54 Chain Adaptor	TB05 & TB08	Suits MC042 & MC054

Part No.	Description	To Suit	Comments
MC076	76.1mm Pressing Chain	TB08	Requires TA108 Adaptor
MC089	88.9mm Pressing Chain	TB08	Requires TA108 Adaptor
MC108	108mm Pressing Chain	TB08	Requires TA108 Adaptor
MJ035	Jaw Adaptor	TB08	Suits 75, 89 & 108 press chains

Part No.	Description	To Suit	Comments
TD054	Pressing Chain Set 42, 54mm Adaptor	TB05 & TB08	Complete in metal case

## 9.1 Press Tools Klauke

### PRESSING HEADS & ACCESSORIES

Item No.	Description
TBC18	18V Battery Charger

Part No.	Description
TBT12	240V to 12V Adaptor (replaces Battery)
TBT18	240V to 18V Adaptor (replaces Battery)

Part No.	Description
TBB23	12V 3.0 Ah Lithium Ion Battery
TBB81	18V 1.5 Ah Lithium Ion Battery
TBB83	18V 3.0 Ah Lithium Ion Battery

Item No.	Description
TM05	Manual Hydraulic Pressing Tool (For Use in Fire and Explosion Protected Areas)

Item No.	Description
TXH	Remote Hydraulic Power Pack 18 V Battery (For Use in Fire and Explosion Protected Areas) Drive unit 700 Bar, Suits 15-108mm, LED Display. High Capacity Motor for Continuous and Maximum Working Speed. Only 6.4 kg, Shatter Proof Housing, Data Transmission via USB Adaptor. 2 Batteries, Charger, 2m Hydraulic , Upholstered Carry Belt, 1.5m Remote operation.

Part No.	Description
TXHH2	2m Hydraulic Oil Filled Hose to Suit TBH
TXHH4	4m Hydraulic Oil Filled Hose to Suit TBH
TXHH6	6m Hydraulic Oil Filled Hose to Suit TBH

Part No.	Description
TXRC15	Remote Controlled, Hand Operated 1.5m
TXFC15	Remote Controlled, Foot Operated 1.5m

Part No.	Description	To Suit
TX02	Hydraulic Pressing Head	15 – 28mm
TX05	Hydraulic Pressing Head	15 – 54mm
TX08	Hydraulic Pressing Head	15 – 108mm

## 9.2 Press Tools Novopress

All press tools come in robust carry case c/w battery & battery charger. provision in the case for storing jaws and extra batteries -sold as per individual requirements

### TBO3

- 1.7Kg including battery
- One hand operation
- Rotatable head
- 240W
- 30mm stroke
- 19 kN piston force
- Patented no leak internal seal design

- 40 – 180 press cycles
- 30 / 60 min charge time
- Suitable for 15, 22 & 28 mm sizes use MK...Y series jaws
- Takes either 12volt 1.5 Ah or 3.0 Ah Li-ion Milwaukee batteries

### TBO6

- 2.8 Kg including battery
- 450W
- 32 kN piston force
- 40 mm piston stroke
- 80 – 160 press cycles
- 30 / 60 min charge time
- Brushless motor technology
- Data downloadable with NovoCheck app
- 2 year maintenance interval with unlimited press cycles

- Suitable for up to 35mm sizes (use MJ...Y series jaws)
- Suitable for 42 mm & 54 sizes (use press collars with TA054Y adaptor)
- Takes either 18volt 1.5 Ah or 3.0 Ah Li-ion Milwaukee batteries

### TBO9

- 3.9 Kg including battery
- 450W
- 32 kN piston force
- 80 mm piston stroke
- Up to 250 press cycles
- 30 / 60 min charge time
- Brushless motor technology
- Back stroke limitation for smaller sizes saves time
- Data downloadable with NovoCheck app
- 2 year maintenance interval with unlimited press cycles

- Suitable for up to 35mm sizes (use MJ...Y jaws)
- Suitable for 42 & 54 mm sizes (use press collars with TA054Y adaptor)
- Suitable for 76, 89 & 108 mm sizes (use press collars with TA221 & TA222 adaptor)
- Takes either 18volt 1.5 Ah or 3.0 Ah Li-ion Milwaukee batteries

### TB10

- Press sizes - suitable for 76 - 168 sizes, using MU collars
- Weight incl. permanently attached adaptor jaw, incl battery 13kg
- 18 volt/3.0 Ah Li-ion battery
- Power consumption 400 W
- Piston force 100 kN
- Piston stroke 60 mm
- Battery capacity 15-20 press cycles
- Charging time approx 60 min
- Jaws rotate 180°

## 9.2 Press Tools Novopress

Item No.	Description	Sizes	Weight
TB03	Compact one-hand press tool	15, 22, 28	1.7kg
TB06	Comfortline press tool	15, 22, 28, 35, 42, 54	2.8kg
TB09	Comfortline press tool	15, 22, 28, 35, 42, 54, 76, 89, 108	3.9kg
TB10	Extra heavy duty tool for super sizes	76, 89, 108, 139.7, 168.3	13kg

Item No.	Description	To Suit Tool
MK015Y	15mm Jaw mini	TB03 mini press tool
MK022Y	22mm Jaw mini	TB03 mini press tool
MK028Y	28mm Jaw mini	TB03 mini press tool

Item No.	Description	To Suit Tool	Requires
MJ015Y	15 mm Jaw	TB06 or TB09	no adaptor needed
MJ022Y	22 mm Jaw	TB06 or TB09	no adaptor needed
MJ028Y	28 mm Jaw	TB06 or TB09	no adaptor needed
MJ035Y	35 mm Jaw	TB06 or TB09	no adaptor needed

Item No.	Description	To Suit Tool	Requires
MU042Y	42mm Spring press sling	TB06 or TB09	TA054Y
MU054Y	54mm Spring press sling	TB06 or TB09	TA054Y

Item No.	Description	To Suit Tool
TD054Y	Press Chains MU042Y, MU054Y & Chain Adaptor TA054Y in impact resistant plastic carry case	TB06 or TB09

Item No.	Description	To Suit Tool	Requires
MU076Y	Ø76 mm Spring Press sling	TB09	TA221 Y Adaptor
MU089Y	Ø89 mm Spring Press sling	TB09	TA221 Y Adaptor
MU108Y	Ø108 mm Press sling	TB09	requires both TA221Y & TA222Y Adaptor

## 9.2 Press Tools Novopress

Item No.	Description	To Suit Tool
TA221Y	Jaw Adaptor	TB09
TA222Y	Jaw Adaptor	TB09

Item No.	Description	To Suit Tool
MU168Y	Ø169 mm Spring Press Sling	Only with TB10 which has integral Adaptor on the tool

### High Pressure spring press collar

Item No.	Description	To Suit Tool	Requires
MX028Y	M28 Spring press collar High Pressure	TB06 or TB09	TA054 Y Adaptor
MX035Y	M35 Spring press collar High Pressure	TB06 or TB09	TA054 Y Adaptor
MX042Y	M42 Spring press collar High Pressure	TB06 or TB09	TA054 Y Adaptor
MX054Y	M54 Spring press collar High Pressure	TB06 or TB09	TA054 Y Adaptor
MX076Y	M76.1 Spring press collar High Pressure	TB10	
MX089Y	M88.9 Spring press collar High Pressure	TB10	
MX108Y	M108 Spring press collar High Pressure	TB10	

Item No.	Description	To Suit Tool
TBB22Y	12 v 3.0 Ah Lithium Ion battery	TB03
TBB83Y	18v 3.0 Ah Lithium Ion battery	TB06, TB09, TB10
TBB84Y	18v 4.0 Ah Lithium Ion battery	TB06, TB09, TB10
TBB85Y	18v 5.0 Ah Lithium Ion battery	TB06, TB09, TB10

Item No.	Description
TBC12Y	12 volt battery charger comes standard in TB03 case
TBC18Y	18 volt battery charger comes standard in TB03 case

## 9.3 Pipe Tools

Internal Ream

External Ream

TS-TR

TS-TR fitted with TR054

Item No.	Description
TT015168	Pipe deburrer for steel pipe 15 –168mm. 3 spare blades in handle

Item No.	Description
TR054	Multi Reamer 15–54mm Inside & Outside Deburring tool. Hand operated or with adaptor mounts into power drill for fast and easy deburring.
TS-TR	Power tool reamer adaptor

Item No.	Description
TE121	Bench mount orbital Tube and Pipe Cutters give a burr-free square cut. Having a multiple jaw concentric clamping system, optimal cutting speed, a cold cutting blade to match different wall thickness, Basic jaws Ø 24 to 121 mm <ul style="list-style-type: none"> <li>• Additional jaws Ø 5 to 108 mm</li> <li>• Cutting precision: Square cuts &lt; 0.25 mm</li> <li>• Scalability: May be transformed into a bevelling and orbital welding machine</li> <li>• Dual-output cutting motor with 2 blade positions for uptake</li> <li>• Weight: 37 kg (easy handling)</li> </ul>

Item No.	Description
TE108	Bench mount 240 v Right angle power cutter with foot switch. Ball bearing roller support. Chip free, no outer burr, dry cuts 22 – 108mm

Item No.	Description
TE1618	Hand held, fast, orbital action, reciprocating saw with pipe clamp for 90° guide support up to 4". Free cuts up to 6". Variable speed for easy start, stepless control up to optimised 2400rpm. Needle bearings. 230V, 1050W. Other options available.

## 9.3 Pipe Tools

Item No.	Description
TF015028	Mini rotary cutter 15–28mm

Item No.	Description
RBNSS534	SS rotary tube cutter 5 -34mm. Bearings in cutter and rollers. Integrated Deburrer blade.

Item No.	Description
TP015035	SS rotary tube cutter 15 - 28mm. Bearings in cutter and rollers. Integrated Deburrer blade.

Item No.	Description
TP015076	SS rotary tube cutter 15 - 76mm. Bearings in cutter and rollers. Integrated Deburrer blade.

Item No.	Description
RBN67S	SS rotary tube cutter 15 - 67mm. Bearings in cutter and rollers. Integrated Deburrer blade.

Part No.	Description
TQ015035	Replacement blades for TP015035 Cu/Al/SS
TQ015076	Replacement blades for TP015076 Cu/Al/SS
RBCWSS	Replacement blades for RBN67S SS
RBCWCU	Replacement blades for RBN67S Cu

Item No.	Description
TI054	Insertion depth gauge 15 - 54

## 10.1 SS BSP fittings

## 10.1 SS BSP fittings

## 11.1 Thermal expansion

Pipes expand as a function of the materials they are made of and the temperature variation to which they are subjected. Therefore, when installing pipework systems three rules must be followed to ensure good results:

- leave sufficient room for expansion
- use expansion compensators
- position both fixed and sliding collars correctly

The following formula is used to calculate longitudinal expansion:  $\Delta L = \alpha \cdot L \cdot \Delta T / 1.000$  where:

- $\Delta L$  is the expansion in mm.
- $\alpha$  is the coefficient of expansion of the material expressed in mm/m $\cdot$  °C
- L is the length of the pipe in m.
- $\Delta T$  is the permitted temperature difference

For a practical calculation of the thermal expansion, according to the pipe length and the temperature variation, see the graph in Figure 4, which applies to stainless steel and is also applicable to carbon steel, but allowing for the fact that the thermal expansion of carbon steel is reduced by 1/3 (-33%). Example: The thermal expansion of a 20-metre stainless steel pipe, subjected to a temperature variation of 70°C is the following:

$$\Delta L = 16.5 \times 20 \times 70 / 1000 = 23.1 \text{ mm}$$

The same result can also be obtained from the graph in fig. 4

If the pipe is carbon steel, the expansion is:

$$\Delta L = 11 \times 20 \times 70 / 1000 = 15.4 \text{ mm}$$

The same result can also be obtained from the graph in fig 4, but reduce the expansion for stainless steel by 1/3 (-7.7mm).

## PIPE MATERIAL

Coefficient of thermal expansion

STAINLESS STEEL 16.5  
CARBON STEEL

Fig. 4

Thermal expansion in stainless steel as a function of the length and the temperature variation.

Carbon steel is 30% less

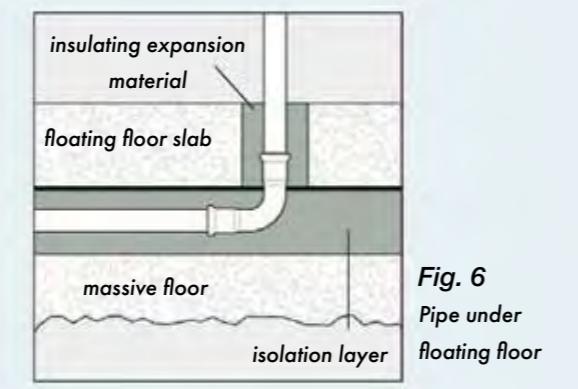

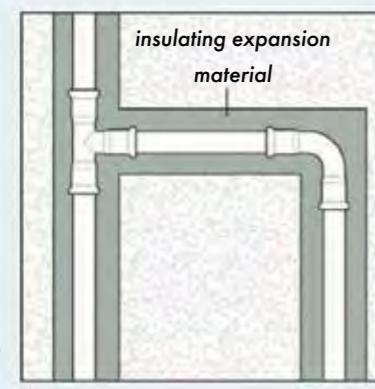

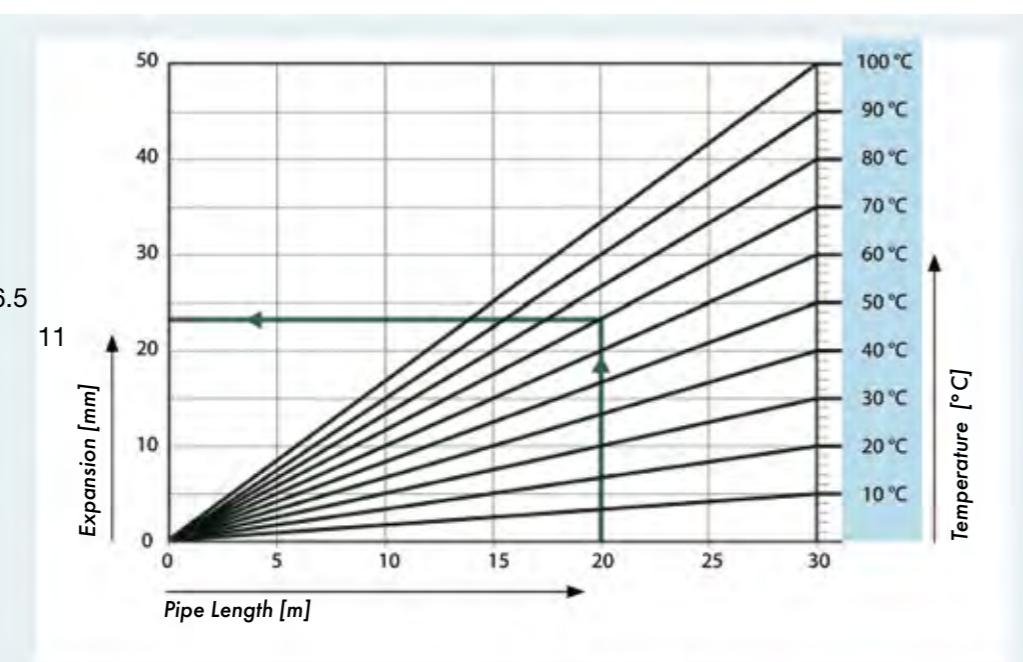

Fig. 5

Chased Pipe

## 11.1 Expansion room

When installing pipework, distinctions should be made between:

- visible pipes
- chased pipes
- pipes under "floating" floors

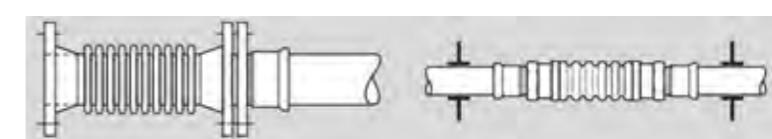

Expansion in visible pipes is absorbed by the elasticity of the run itself provided that the pipes are correctly fixed. Chased pipes must not be in direct contact with the plaster, but wrapped in a pad of elastic material, such as glass wool or plastic foam fig. 5 Thus fitted, soundproofing requirements are also satisfied. Under a "floating" floor, pipes are laid below the isolation layer and can expand freely fig. 6 Vertical channels must be coated in elastic insulating materials. The same type of coating must be applied to pipes passing through walls and ceilings.

## 11.1 Expansion compensators

Minimum pipe expansion can sometimes be compensated for by the degree of elasticity of the pipe system itself. If this is not possible, expansion compensators must be used.

Compensators can be either U or Z-shaped, and can be preformed or made up when the Europress Pressfitting components are being assembled.

fig. 7 shows the configuration of U-shaped compensators, while the diagram in fig.8 allow the compensation length to be calculated, for the estimated expansion, in steel pipes. Similarly, fig. 10 shows the configuration of a Z-shaped compensators, while the diagrams in figs. 12 and 13 allow the compensation length to be calculated, for the estimated expansion, in steel pipes. The latter diagrams can also be used to calculate compensation in T-shaped branches (fig 11).

Flanged and threaded expansion compensators

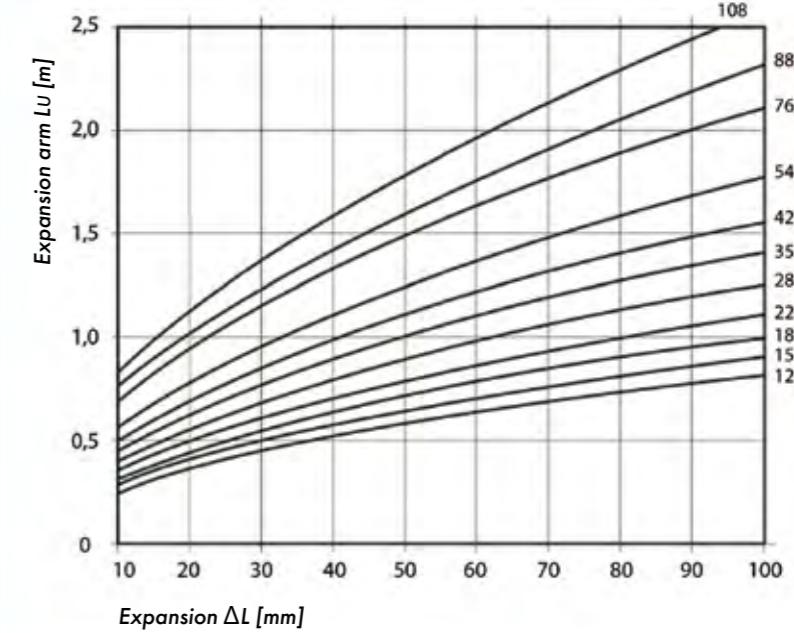

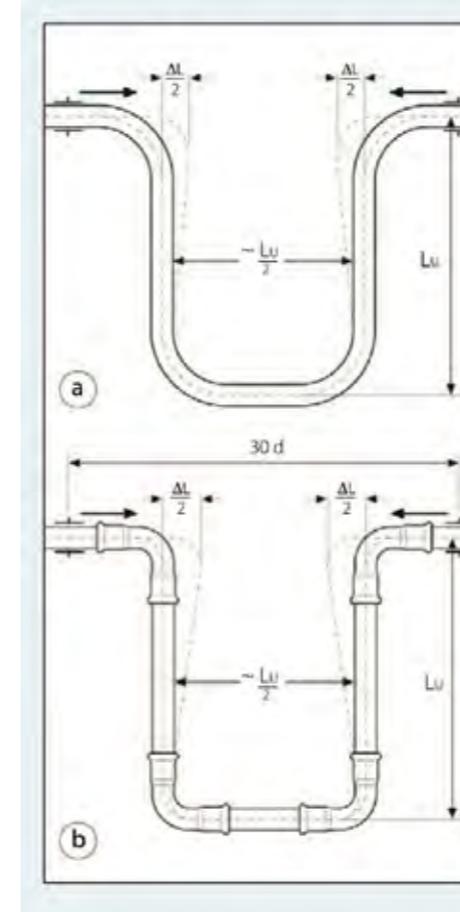

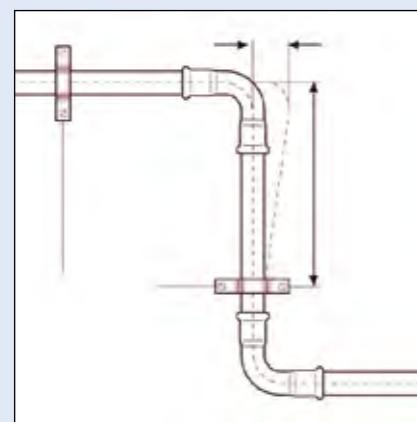

Fig. 7

Expansion compensators  
U-shaped

Length LU of compensator U-shaped in stainless steel and carbon steel

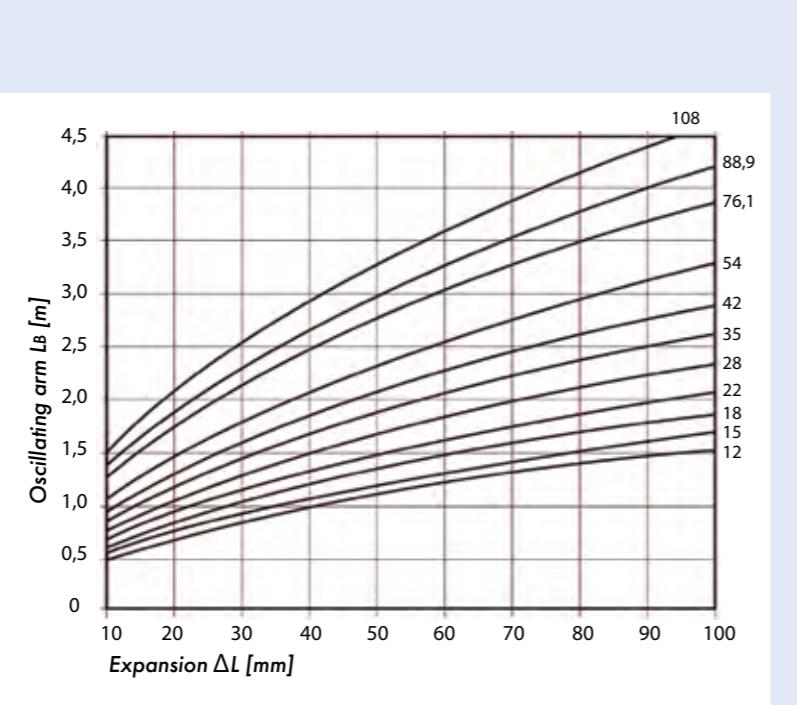

## 11.0 SYSTEM DESIGN

**Fig. 10**  
Expansion compensators Z-shaped

**Fig. 11**  
T-shaped branch

**Fig. 12**  
Length LB of compensator Z-shaped in stainless steel and carbon steel

### 11.2 Pipe fixing

The pipe support collars serve two purposes:

- locking the pipe
- orienting expansion caused by temperature fluctuations **COLLARS OR FIXING POINTS**

There are two types of collars or fixing points:

- fixed, which lock pipes rigidly
- sliding, which allow axial movement

#### Positioning fixing points

A pipe with no changes of direction or expansion compensators must have only one fixed anchoring point (fig. 14). In the case of long pipes, we recommend placing this collar towards the centre of the section so as to allow expansion in both directions. This solution is also particularly suitable for vertical pipes that pass through many floors precisely because it allows for expansion in two directions, also decreasing stress on the branches.

Fixed collars must not be placed on fittings (fig. 15) and even sliding collars must be positioned so as not to foul fittings and become potentially dangerous fixed points (fig. 16).

**Spacing (m) of clips or brackets for pipes carrying fluids. Can be increased for gases**

Pipe mm O.D.	15	22	28	35	42	54	76,1	88,9	108	168,3
DN	12	20	25	32	40	50	65	80	100	150
Recommended	1,5	1,5	2	2,5	2,5	3	3	3	3	3
Maximum	1,5	2	2,4	3	3	3	3	3	3	3

#### Minimum distances

Installing pipework correctly involves observing certain minimum distances, which depend on several different factors:

##### • Distance between fixing points

Fixing points must be placed at an adequate distance from each other. If the brackets are too close together they can prevent the absorption of expansion. If they are too far apart they can increase vibration and amplify noise. Tab. 2 shows the distances recommended by Europress.

##### • Manoeuvring space for the pressing tool

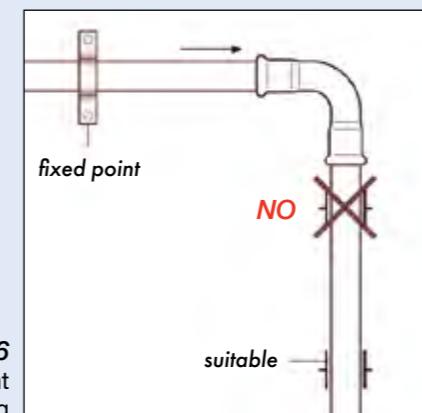

Adequate space for manoeuvring and avoidance of obstacles must be allowed for, and this will vary according to the size of the pressing tool. Tab. 3 shows the minimum space to be allowed.

##### • Distance between fittings

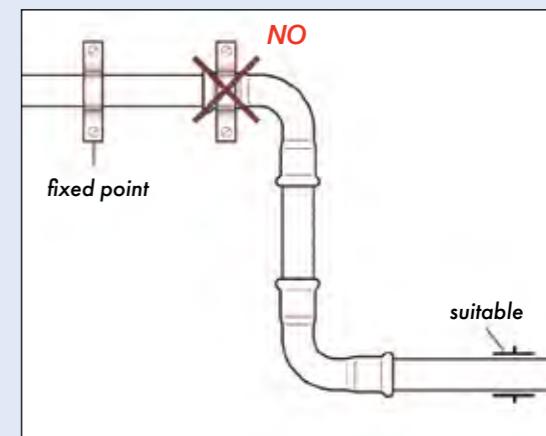

Two pressfittings too close together can compromise the perfect seal of the joints. Tab. 4 shows the minimum distances to observe.

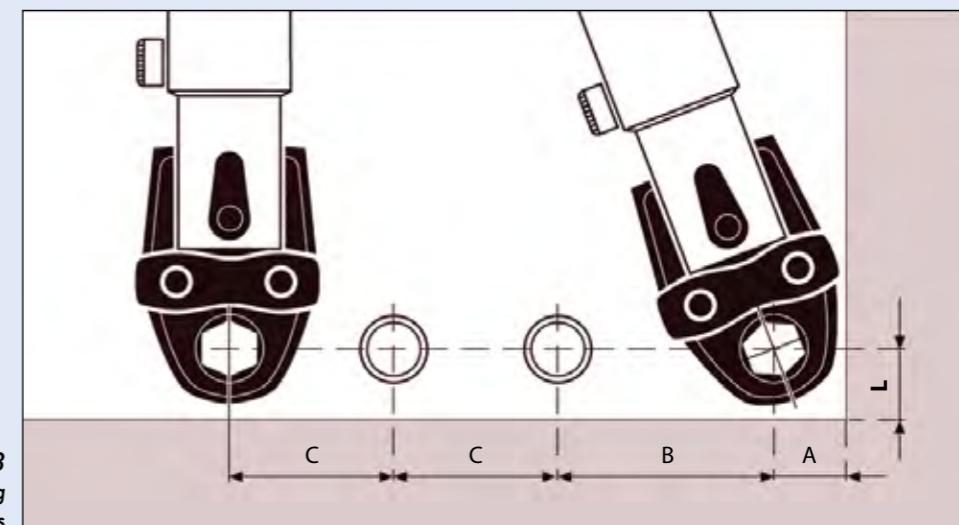

**Fig. 14**

## 11.3 Corrosion Resistance

### 11.3 CORROSION RESISTANCE

Stainless steel installations for drinking water

#### Resistance to internal corrosion

Stainless steel does not change the characteristics of drinking water, nor does the water affect it in any way. For this reason, drinking water, even when treated, is absolutely compatible with the AISI 316L stainless steel used by Europress. Perfect hygiene is thus guaranteed.

#### Resistance to bimetallic corrosion

Stainless steel is resistant to corrosion, even in systems where it is in contact with non-ferrous metals (bronze, copper and brass). If however, it is in direct contact with carbon steel, bimetallic corrosion can occur. This risk can be reduced by inserting a nonferrous joint between the two metals or it can be completely eliminated by using non-ferrous spacers at least 50mm in length

#### Resistance to external corrosion

External corrosion can only occur on a stainless steel system in very particular situations, such as prolonged contact with high concentrations of chlorides. In these cases, we recommend covering the pipes with a closed-cell coating, taking care to apply waterproof glue to the cutting and junction points. Alternatively, protective anti-corrosion tape can be used. Felt sheathing must not be used as it holds moisture that can lead to corrosion.

### 8.6 Carbon steel installations for heating/cooling

#### Resistance to internal corrosion

Oxygen is not normally able to penetrate closed-circuit water heating systems from the outside so carbon steel pipes are not subject to internal corrosion. Carbon steel components can also be used in mixed installations with other non-ferrous metals, such as copper, aluminium, etc.

However, such systems must always be kept filled, even when not operating, or should be emptied and kept dry, to avoid both air and water being in contact with the metal, a situation that can lead to corrosion.

#### Resistance to external corrosion

External corrosion can frequently occur on carbon steel systems in chased installations, or in humid conditions. To prevent this, we recommend covering the pipes with closed-cell coating or protective anti-corrosion tape, ensuring that the pipes are entirely covered. Felt sheathing must not be used as it holds moisture that can lead to corrosion.

### 11.4 COMMISSIONING & TESTING

#### System commissioning

After installation and before enclosing in any walls, insulation or painting, the system must undergo testing to ensure its carrying capacity and seal integrity. The test method and result must be documented in a report (contact Technical Department for approved Work method and report form).

The choice of the test method depends on the type of installation, the medium that the system is designed for, the fluid selected for testing with, and the progress over time of the building works as well as the requirements related to hygiene and corrosion.

#### Seal testing

If using a dry test with compressed air it must done with oil-free compressed air so there is no residual oil left in the pipework. This is done in 2 phases - a seal test followed by the load test.

Drinking water or heating installations are tested using water at a pressure at least 1.5 times the operating pressure. If no leaks are detected during testing, it is best practice to flush the pipes thoroughly before charging the system with water.

Gas systems are to be tested in accordance with the relevant Australian Standard for the type of gas. Test procedures involving pressures greater than 20 bar should be confirmed with Europress technical department.

### 8.8 Noise insulation

Pipes are a possible means of transmitting noise from other sources (pumps, valves, etc.) and, for this reason, they must be insulated with elastic materials to avoid direct contact with collars, walls, etc.

### 8.9 Thermal insulation

Hot water pipes must be insulated in compliance with the codes of practice relating to energy conservation and heating systems. This also acts as a safety precaution against accidental contact.

Cold water pipes must also be adequately insulated to prevent condensation and dripping. For stainless steel installations the insulating material has to be without chlorine or its compounds.

#### Protection against freezing

Where there is a danger of water freezing in pipes, they must be protected with insulating material of sufficient thickness, or antifreeze should be used to avoid leaks caused by loosened joints or swelling.

### 11.5 GUARANTEE

All Press joints must be made in accordance with AS/NZS 3500.1. The use of original Europress fittings, with the correct pipes and approved pressing tools, coupled with strict adherence to the technical instructions given for both the design and installation of the system, will guarantee the longevity of the system for 25 years. Furthermore, the manufacturer's guarantee that when installation is done in accordance with guidelines, pressfit tightness guarantee is in excess of 30 years.

## 12.1 Pressure drops

Water or gas flow in the pipes, gradually loses its pressure, because of the different resistances it meets.. These resistances are due both to straight pipe resistance or to single casual conditions such as direction changes, section reductions, etc.

Therefore the total pressure drop for a pipe system is calculated according to the following formula:

$$\Delta p = \Delta p_1 + \Delta p_2$$

where:

- $\Delta p_1$  is the pressure drop due to straight lengths
- $\Delta p_2$  is the pressure drop due to single localized resistances

## 12.2 Pressure drop of a straight pipe

The following formula is used to calculate pressure drop, due to straight lengths

$$\Delta p_1 = \Sigma R \cdot l$$

where:

- $R$  is the unitary pressure drop expressed in mbar or in Pa/m
- $l$  is the straight pipe length in m

As well, the following formula is used to calculate the unitary pressure drop:

$$R = \lambda \rho x v^2 / 2 x d$$

where:

- $\lambda$  is the pipe friction coefficient
- $\rho$  is the fluid density expressed in kg/m<sup>3</sup>
- $v$  is the fluid speed expressed in m/s
- $d$  is the internal pipe diameter in mm

For a practical calculation of pressure drops it is possible to refer to the following tables.

## 12.3 Pressure drop of single localised resistances

The following formula is used to calculate pressure drops due to single localized resistances.

$$\Delta p_2 = \Sigma Z$$

where:

- $Z$  is the pressure drop of the single fitting expressed in mbar

As well, the following formula is used to calculate the pressure drop of the single fitting

$$Z = \xi \rho x v^2 / 2$$

where:

- $\xi$  is the coefficient, which depends on the fitting type
- $\rho$  is the fluid density expressed in Kg/m<sup>3</sup>
- $v$  is the fluid speed expressed in m/s

For a practical calculation of pressure drops it is possible to refer to the following tables on pages 38 to 46.

## 13. POSSIBLE CAUSES OF LEAKS

1. Tube inserted into the fitting could be creased or damaged.
2. Tube not pushed fully home in the fitting.
3. Non-standard connection between tubes or non-matched sizes.
4. Incorrect installation fixing.
5. Connection made to the fitting by the operator using incompatible products.
6. Installations subject to mechanical stress, e.g. mountings not properly lined up.
7. Other objects anchored to the hanging system.
8. Thermal expansion not compensated for by adequate fitting techniques or equipment.
9. Freezing of the installation.
10. Pressure or temperature specifications outside those indicated in the conditions of use.
11. Unforeseen external causes such as accidental impacts.
12. Fittings welded by the operator rather than pressed.
13. Double pressing by the operator either of the fitting itself or near it.
14. Minimum distance between two fittings not observed.
15. Poor storage and handling of the fittings with deterioration of the o-ring, caused by external agents such as light, temperature, dirt, ozone etc.
16. Mechanical damage to the fitting (cuts, bending, crushing).
17. Replacement of washers or spare parts not supplied by Europress.
18. Tearing of the o-ring, for example caused by pipes not properly deburred.
19. Incorrect tube insertion causing the o-ring to become dislodged from its position.
20. Use of unsuitable o-ring lubricants. Use only soap and water.
21. Internal or external liquids not compatible with the o-ring composition.
22. Pressing carried out with worn clamp jaws.
23. Use of a pressing-fitting tool no longer capable of exerting sufficient force (the result of wear and tear, operator error or lack of maintenance).
24. Clamp jaws not correctly positioned in relation to the fitting when pressed.
25. Clamp jaws not fully pressed home.
26. Use of non-standard clamp jaws or jaws made for other section types.

Tab. 1

Stainless steel pipes for drinkable water (roughness  $k=0.0015$  mm). Pressure drops  $R$  as a function of peak flow rate  $V_p$  and speed  $v$  at 10 °C temperature.

## 13.0 EUROPRESS - PRESS JOINT INSTRUCTIONS – SIZES 15, 22, 28 & 35 as per AS/NZS 3500.1

— SIZES 42, 54, 76.1, 88.9, 108,  
139.7 & 168.3 as per AS/NZS 3500.1

**EUROPRESS**  
STAINLESS STEEL  
CARBON STEEL

**1. CUTTING:** Cut the pipe using burr free approved cutters. Do not use oxy-acetylene or abrasive cut off wheels. Pipes must be cut at right angles to their axis, using a pipe cutter or fine-tooth saw, taking into account the depth of insertion into the fitting.

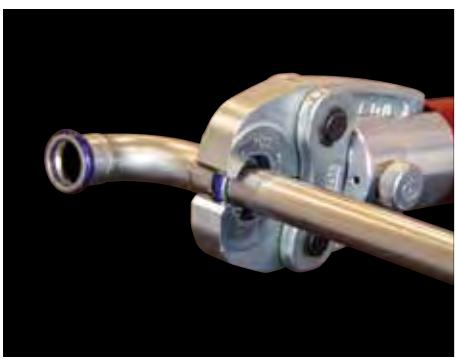

**2. DEBURRING:** All pipe cuts must be carefully deburred, both inside and outside, using a manual or electric deburring tool. Any cutting residue (swarf) must be removed to preclude damage to the O-ring when the pipe is inserted into the fitting, avoiding possible leaks.

**3. WITNESS MARK INSERTION DEPTH:** To ensure a correctly inserted joint the pipe must be marked with a fine-point felt -tip pen where it meets the fitting using the Europress depth gauge so that full insertion can be verified.

**4. ASSEMBLE FITTING ON TUBE:** Before assembling the fittings, the positioning of the O-rings must be checked and, if necessary, lubricate O-ring with water or talc to ease the insertion of the pipe. Never use oils, greases, glues or other similar substances. The pipe is inserted in the fitting with a slight rotating motion until it hits the stop.

Check pipe is fully inserted to witness mark

**7. PRESS JOINT:** Initiate the press cycle by squeezing the trigger **1** – hold until press cycle is completed. Do not allow interruption to the press cycle. If the LED light **2** comes on or warning beep sounds, the joint is NOT approved. If the hydraulic ram stops mid-cycle the automatic reset function can be manually overridden by depressing the reset button **3**.

Check L.E.D. light after each press. If it comes on, battery must be recharged or changed before attempting the next press. see trouble-shooting guide.

**1. CUTTING:** As per previous page

**2. DEBURRING:** All pipe cuts must be carefully deburred, both inside and outside, using a manual or electric deburring tool. Any cutting residue (swarf) must be removed to preclude damage to the O-ring when the pipe is inserted into the fitting, avoiding possible leaks.

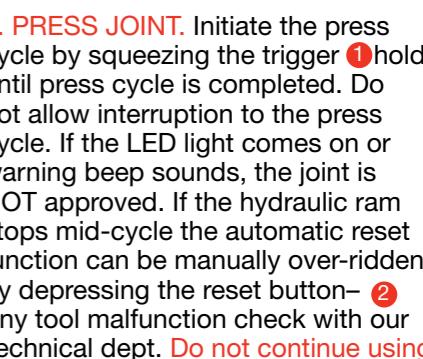

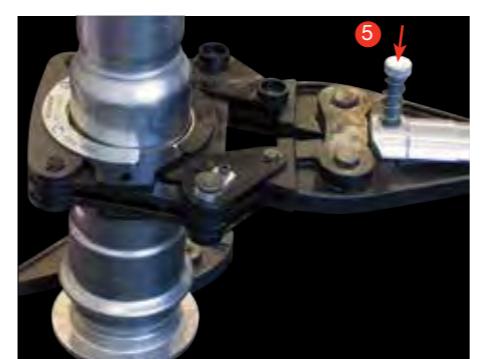

**3. WITNESS MARK INSERTION DEPTH:** To ensure a correctly inserted joint, the pipe must be marked with a fine-point felt-tip pen.

42 & 54 Use the Europress depth gauge.  
Large sizes use rule (pictured)  
76.1 mark at 55mm  
88.9 mark at 63mm  
108 mark at 78mm  
139.7 mark at 97mm  
168.3 mark at 117mm

**5. ATTACH PRESS COLLAR:** The pressing collar must be M-shaped profile corresponding to the diameter of the fitting to be pressed. Retract the lock pin **3**, open the jaws and position the jaws around the fitting.

**6. LOCK COLLAR:** Ensure that the internal channel of the jaws form a perfect fit round the O-ring seat of the fitting. Ensure the lock pin is fully engaged. **4**

**8. CONNECT PRESS TOOL:** Retract the lock pin, engage the adaptor and make sure lock pin is fully engaged. **5**

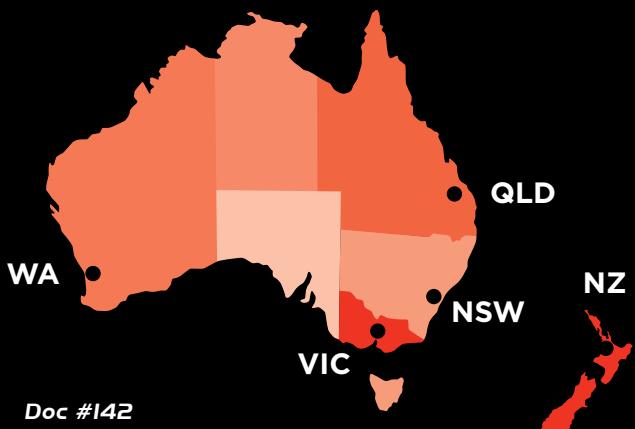

Check witness mark for insertion and alignment before initialising press cycle.

**9. PRESS JOINT:** Initiate the press cycle by squeezing the trigger **1** hold until press cycle is completed. Do not allow interruption to the press cycle. If the LED light **2** comes on or warning beep sounds, the joint is NOT approved. If the hydraulic ram stops mid-cycle the automatic reset function can be manually overridden by depressing the reset button – **2**. Any tool malfunction check with our Technical dept. Do not continue using tool without approval
