

BV 1100

Backpack Vacuum Cleaner

Reliable Performance Comfort

- Efficiency
- Reliability
- Durability
- Low Maintenance
- Comfort
- Low Noise Level
- Double Insulation
- One Year Warranty

The BackVac is the ideal machine for cleaning commercial properties, stairs, theatres or any congested areas. The machine offers high manoeuvrability and superior design for reliable performance and comfort.

HIGH IMPACT INJECTION MOULDED PLASTIC

The BackVac's injection moulded plastic body is tough enough to work as hard as you do.

Twin Santoprene™ non marking soft bumpers have been strategically located on the container to protect walls, furniture, doors, glass and fittings.

The snap on lid is another intelligent design feature replacing protruding clips, which all too often scrape and mark walls and doorways.

Nilfisk-Advance offer a 1 year warranty on all plastics parts.

PROFESSIONAL DESIGNED FOR SAFETY AND COMFORT

Unlike metal backvacs the Nilfisk BV 1100 BackVac is double insulated, offering operators complete electrical safety.

The frame has been designed to distribute the machine weight over the hips, not the shoulders, eliminating the need for other discomforting back supports like mesh, straps and pads.

The result is a BackVac with superb balance, low noise level and electrical safety for the professional cleaner.

SUPERIOR AFTER SALE SUPPORT

When help is required, Nilfisk Advance has the best service support in the industry with a comprehensive service network protecting your investment.

To maximise product performance and reduce the risk of break downs, Nilfisk-Advance offers an on-site preventive maintenance programs within all Metropolitan areas.

To discuss the best maintenance program, contact Nilfisk-Advance.

Superior Design Features

ABS Moulded snap on lid eliminating clips that can stretch out of shape and damage walls and fittings.

- Lightweight frame curves into the lower back distributing the weight onto the hips and not the shoulders.
- Exhaust air is directed upwards and away from the operator.
- Left or right handed operation.

Power Head

Out-let to operate optional powerhead.

Capacity and Filtration

The needle-point felt dust bag retains 99% of all dust particles down to 1 micron.

Santoprene Bumpers

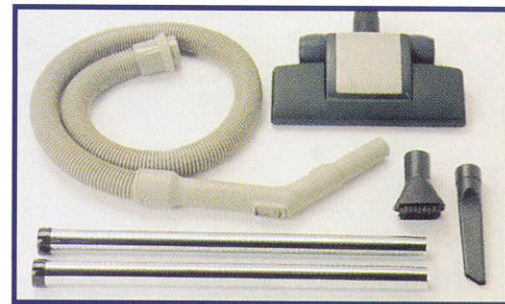

Santoprene non marking bumpers protect walls and fittings by absorbing impact.

Quiet Operations

The polypropylene motor housing ensures quiet operation and does not transfer heat to the operators back.
