The AQ Medical refrigerator range are robust and cost effective units, purpose-built for vaccine storage following the Australian Government Department of Health's 'Strive for 5' vaccine storage guidelines. They are designed with consistency in mind, and maintain a stable temperature between the recommended +2°C to +8°C. AQ Medical units hold safety features such as visual and audible alarms in the event that temperatures fluctuate outside the set range. All AQ Medical refrigerators are accredited by the Quality Care Pharmacy Program (QCPP).
