GREVEN

INDUSTRIAL SKIN CARE SOLUTIONS

**Pre-Work Creams, Skin Cleansing
and Skin Conditioning since 1923**

INDUSTRIAL SKIN PROTECTION

Occupational Contact Dermatitis (OCD) is accountable for 75 percent of skin conditions in the workplace and occurs in workers who are exposed to irritating or allergenic substances or specific physical factors. OCD and other skin issues are also largely preventable.

For almost 100 years, Peter Greven® Physioderm has been manufacturing products for clean & healthy skin. The wide range of available products for effective protection, cleansing and care of occupationally stressed skin, has made Peter Greven® Physioderm one of the leading enterprises in the development and manufacture of occupational skin care products.

Through its effective hand care plan, companies can now implement an easy to understand process to combat occupational skin diseases.

PRIMARY CAUSES OF OCCUPATIONAL SKIN PROBLEMS:

Contact with oil, grease, solvents and degreasing agents

Pre-existing sensitive skin or atopic dermatitis (eczema)

Exposure to potentially allergenic chemicals

Cold working conditions

Exposure to ultraviolet radiation

Prevent skin deterioration. Contact sales@pryme.com.au

BEFORE WORK SKIN PROTECTION

Protecting the skin from harmful working materials, irritants and sensitizers is an important step for maintaining skin integrity. Using an **effective pre-work cream or lotion** can help prevent the skin from irritation, de-fatting and the excessive adhesion of contaminants.

IMPROVES THE GRIP ON TOOLS OR WORK MATERIALS

PREVENTS THE ADHESION OF DIRT PARTICLES

FACILITATES THE CLEANING OF THE SKIN WHEN EXPOSED TO STUBBORN SOILS

SILICONE FREE

Prevent skin deterioration. Contact sales@pryme.com.au
