

# MO Series – MO20-25, MO50T

Low Level Order Picker and Tow Tractor | 2,000kg, 2,500kg and 5,000kg

Yale's MO range of order pickers and tow tractors offer quiet, effortless operation and an abundance of features, all focused on ensuring operators can achieve superior control with enhanced

ergonomics and productivity. Featuring CANbus technology and high IP protection for all its main components, Yale® can offer a tailored solution for any warehousing need.

# MO Series – Models MO20-25, MO50T

## MO20-25 LOW LEVEL ORDER PICKER (LLOP)

Available with fixed or lifting platform, with independent fork lift to facilitate ground, first and second level picking

## MO50T TOW TRACTOR

Designed for use in a wide range of manufacturing applications, particularly for line-feed operations

## PRODUCTIVITY

- The powerful high thermal capacity 2,6kW AC drive motor delivers high performance acceleration, braking and travel speed, making these models ideal for stop and go operations
- Acceleration, travel and braking speeds can be adjusted by a service engineer to the particular needs of the application through the operator console
- Effortless electrical steering and automatic speed reduction on cornering ensure excellent control and high productivity
- The anti-roll back on ramps device ensures efficient operation
- LLOP models provide a nominal capacity of up to 2500kg, with 48 different fork length options. This enables the truck to be configured to suit the varying operational requirements of a vast range of applications
- A maximum travel speed of 13km/h reduces travel time on long runs between docking and picking areas
- The large battery capacity makes these models perfect for dual shift operation whilst reducing the frequency of battery charging. Vertical or lateral battery extraction is available.

## ERGONOMICS

- Scooter control with electric steering reduces the arm movement required to change direction. This allows the operator to remain within the truck footprint at all times for protection as well as reducing operator fatigue and increasing productivity
- A personnel sensor, which covers the entire platform floor area detects when the operator is on board. This, together with the high, soft touch, back rest, allows the operator to locate the most comfortable operating position
- The large suspended platform area increases operator comfort and allows easier pass through to optimise picking from both sides
- Slow-speed forward and reverse direction buttons (coasting function) are located on the backrest. This allows the operator to walk alongside the truck to the next pick location
- On LLOP models, the foot controlled lifting platform option facilitates second level picking. This option reduces the distance the operator has to reach when picking from rack to pallet, reducing fatigue.

## COST OF OWNERSHIP

- Integrated system controls, including the dual technology MOSFET combi-controller, AC traction and DC pump motors increase energy efficiency
- Adjustable performance settings allow the truck to be tailored to the needs of the application, reducing energy consumption
- Regenerative braking reduces the use of the service brake and dissipates heat from the traction motor increasing the life of key components
- Motors and controllers are protected against damage and debris, reducing servicing and repair costs.

## DEPENDABILITY

- The solid frame construction and industrial grade components ensure long-term reliability and durability
- A sturdy wrap around bumper plate protects the truck against impacts and damage and minimises repair costs
- On LLOP models, the robust pull rod design of the load wheel axle ensures long term reliability
- The truck's electronics - including the enclosed AC traction motor, sealed combi-controller (with IP65 rating), sealed electrical connectors and hall effect sensors and switches - are all protected from damage to ensure excellent reliability, maximum productivity and reduced servicing costs
- Reduced wiring complexity is a result of the CANbus communication system, which also provides easy access to components and delivers worldclass reliability.

## SERVICEABILITY

- The CANbus system and diagnostics can be controlled and monitored via the console or through the single plug-point. Fault codes can be displayed on the console for easy service identification
- A one-piece hood provides easy access to key components
- Full access to all the trucks main components, including the motor, by the removal of the motor cover, which is retained by two easily removed screws
- The low maintenance AC traction motor with built in thermal protection is fully enclosed for protection against damage and debris, minimising service downtime.

## AVAILABLE OPTIONS INCLUDE:

- Side battery extraction
- 48 different fork dimensions
- Floor-level bumper (rubber bumper)
- Mid mounted bumper (bull bar)
- Universal support bar on motor compartment
- Several hook types (MO50T)
- Various drive wheel compounds, platform lift heights and storage compartments

## DIMENSIONS – MO20, MO25

## DIMENSIONS – MO50T

## DIMENSIONS

	b5 = 520mm - 670mm		b11 = 340mm - 380mm - 490mm			with 465 Ah battery*

long	1200	2356	1790	496	2400	3063	3764	3268	4008
	1450	2856	1790	996	3000	3063	4264	3268	4608

\*Add 145mm to this value and l2 dimension with 620Ah. \*\*All values for y and Wa are with lowered forks. With forks raised 120mm, these dimensions will be reduced by 70mm. \*\*\*All values for x are intended with forks raised 120mm. With forks lowered these dimensions will be increased by 70mm. Ast = Wa-x+a, where a = minimum operating clearance of 200mm. Ast is calculated for 465Ah battery and Wa reduced by 70mm (forks raised)
