

Boundary Fencing

Restricting Vehicle Access

Safe Direction Boundary Fencing is used to prevent unauthorised vehicle access into open spaces, such as parks, sporting fields, native areas and other recreation areas.

Featuring galvanised steel posts that are driven directly into the ground and galvanised steel cables, Boundary Fencing provides an easy-to-assembly and durable security solution.

Specifications

- Galvanised steel C-posts that are driven directly into the ground.
- Recommended max. post spacing: 3m.
- Recommend cable diameter: 19mm.

Features

- Can be configured with twin or triple cable arrangement.
- Threading of cables through posts restricts removal by vandals.
