Access Motorised APT - Dual Limb

MOTORISED ACTIVE PASSIVE TRAINER (APT) – DUAL LIMB

Moving synovial joints prevents biomechanical and histological changes in the soft tissues around the joint. Furthermore, it decreases the elasticity of the capsule and ligaments (Akeson et al. 1980). This allows for free movement and can decrease impairments and delay or avoid secondary impairments.

Can be used in
ACTIVE MODE without the motor &
PASSIVE MODE with the motor

Safe and
easy to use!

KEY FEATURES

- Provides non-impact exercise that helps increase strength and flexibility in the upper extremities
- Arm/leg pedalling helps increase cardiovascular endurance
- Comes with a meter to display the distance, time, cal, and speed
- Adjustable speed
- Adjustable height
- Adjustable length
- Wheelchair access

DIMENSIONS

- Overall Size: 130 x 60 x 105cm

INCREASES

- Blood circulation
- Stamina
- Strength
- Range of motion
- Bladder control
- Muscle tone

DECREASES

- Atrophy
- Spasm
- Swelling
