What is a microfibre cloth?

Our cloths are a microfibre blend of polyimides, each fibre is finer than a single strand of silk. The material is split several times to make a finer thread which is then woven together, allowing the cloth to remove dirt more efficiently from surfaces due to the higher number fibres per cm² of cloth.

Due to their thinness and density, Microfibre cloths can remove dirt just by using the mechanical force created by rubbing the cloth across a surface. The dirt is absorbed deep into the spaces created between the fibres. This allows Reynard microfibre cloths to effectively Hoover up dirt particles and draw them into the cloth rather than pushing them around the surface to provide a superior, chemical-free clean.

Benefits of using Microfibre:

Cleaning performance

- Bacterial removal capability: tested and proven to remove 99.9% of Clostridium difficile and Pseudomonas aeruginosa spores
- Durable, large cloths: ideal for both wet cleaning and dry dusting
- Avoids streaking

Health and safety

- Chemical free cleaning avoids pathogens developing a resistance
- Limits staff exposure to chemicals
- Less potential for slips on wet floors and other injuries
- No heavy water buckets to carry

Environment

- Reduces water usage
- Reduces plastic consumption
- Removes the need for laundering

Cost-effective

- Cheap enough to use once but durable enough to use again and again
- Disposable cloths remove costs associated with laundering cloths

Designed to deliver a high quality, chemical-free clean and reduce the potential for cross contamination.
