BAKERY, PASTRY AND BISCUITS

FLOWPACK MACHINE
FOR **BAKERY** PRODUCTS

since 1965

**MADE in
ITALY**

Bakery, Pastry and Biscuits

EXTENDING CRISPNESS AND FLAVOUR

+ High speed of packaging and high integration with automatic production lines processing bakery products

Packaging bakery, biscuits and pastry products, requires a high degree of knowledge for both, flow wrappers and automatic feeding systems. The complexity of the product characteristics are not related just to fragility and handling care, but also to the capacity of managing the upstream from exit of the oven.

Record has a long experience in designing and manufacturing complete solutions, building competence by realizing and installing automatic packaging lines, including systems for sorting, orienting, grouping, etc...

Since more than 50 years, Record designs and manufactures solutions for packaging bakery products, by offering Horizontal machines and automatic feeding systems, capable to respond to market needs.

MAP READY

Record designs and manufactures flow pack machines for extending product's life of perishable products through the Modified Atmosphere Packaging, replacing the residual O₂ in the package, by flushing inhibitors and inert gasses.

AUTOMATIC FEEDERS

The automatic feeding systems handle, sort and organize the products from upstream, indexing and grouping in an appropriate manner to be packed.

RELOCK

It is an innovative reclosable system, based on the concept of partially cut of the packaging material through a laser unit device and stick a label on top of the pre-cut film for easy opening and easy reclosing of the pack.

PRODUCTION EFFICIENCY

Record's experience in designing and manufacturing horizontal flow pack machines together with sorting systems, optimises the packaging process, managing with efficiency all the activities connecting production and logistics departments.

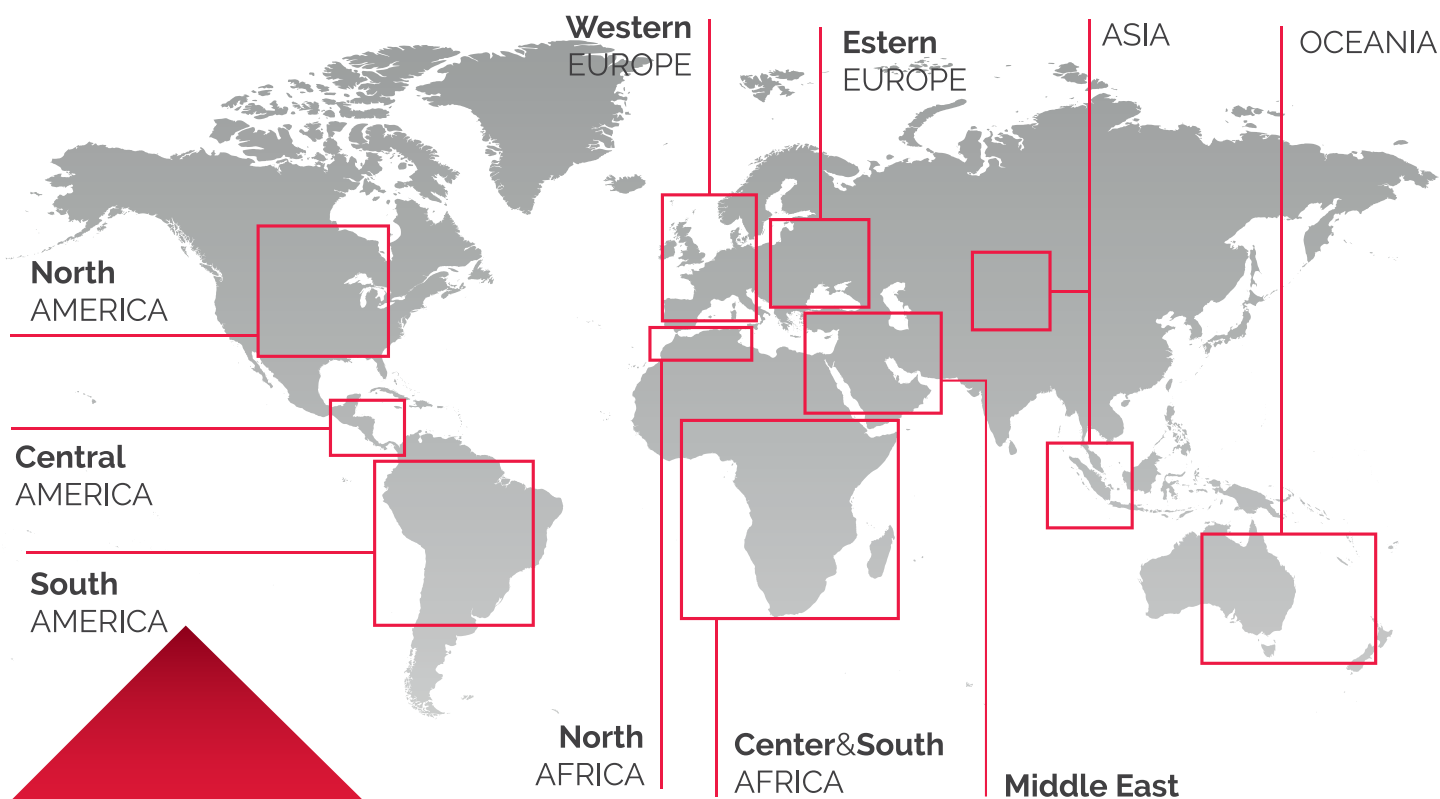

CRISPNESS AND FLAVOR

The packaging of food, allows protecting the product in the whole chain, transport and sale included. In particularly for bakery products, the packaging has also the purpose to maintain the fragrance and taste. Achieving this objective is essential, maintaining the original characteristics and offering to the consumer flavour and freshness.

PRODUCTS SORTING

The experience made by Record designing automatic feeding systems represents a very important wealth of knowledge in the packaging of bakery products. Actually quite often grouping, piling and aligning with care and accuracy are keys element for achieving speed, reliability and efficiency of the entire production process.
