Extraordinary image quality and excellent user experience are at the core of SonoScape values. As a reliable partner, our comprehensive diagnostic imaging solutions are designed to meet your veterinary needs, through professional veterinary software, comprehensive measurement package and a wide range of transducers.

Professional Veterinary

SonoScape has designed a wide range of products to facilitate the daily work of veterinaries. There is a solution from us for every challenge you may have with animals. SonoScape is dedicated to working on better ultrasound technologies, particularly imaging quality, to enhance your diagnostic confidence.

Features:

Veterinary software
specialty software and patient database management for animals of all kind

Practical design
Polished appearance with durability that copes with various scenario

Comprehensive transducers
Full range of transducers for different applications with excellent images

Ease of Use
Enhanced user interface and workflow. New veterinaries are able to operate in a very short time

Image quality is not the only thing that we care about, we care about the experience of common operations as well. And we are tackling the increasing challenges facing a modern medical ultrasound manufacturer. Better users' experience always was, and always will be, our goal.

Optional application:

Specialty veterinary software makes it easy to choose from a list of applications before the examination.

Patient ID/Owner name:

The patient information interface is designed specifically for veterinary uses with fields of animal name, species, breed and castration status.

Body mark and annotation:

Comprehensive veterinary body mark annotations are available to note the specific area of examination during or after an exam or measurement.

Measurement and report:

Specialized calculation and comprehensive reports cover a full range of applications, providing necessary tools to users' needs.

Veterinaries' work can be burdensome due to the daily ins and outs. SonoScape strives to prepare for you as much as possible – so you can focus on what you are passionate about.

Image Quality

Excellent images with fine details are provided in versatile scanning modes by different types of probe.

Automated Functions:

With the press of a button the image is automatically adjusted and optimized.

Ergonomic Design:

Foldable LED monitors with large display, backlit keyboard and height adjustable trolley satisfied any condition of scanning.

User-definable Graphic Exam Mode

Veterinaries can define their own graphic exam mode for companion animals, farm animals, lab animals and equines.

Advanced imaging technologies for high quality images to satisfy various practices, academia, research, and wildlife

Satisfying equine presets for cardiac, abdominal, tendon, and reproductive evaluation

Measurement, calculation, and annotation presets for each exam mode

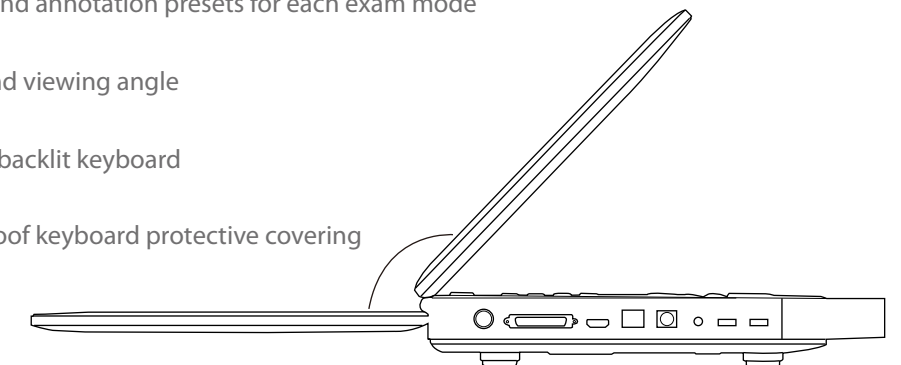

180° Wide range folding angle and viewing angle

Anti-reflective screen and a backlit keyboard

Splash resistant and dust proof keyboard protective covering

EQUINE/ FARM ANIMALS

A combination of efficiency, simplicity and versatility, SonoScape veterinary series systems are specially designed for equine and farm animal examinations. Veterinarians are able to work easily around large animals by virtue of the devices' lightweight and durable design, despite challenging situations. Specialty transducers and equine oriented software deliver stunning image display across a range of applications such as MSK and reproductive organs. Deep penetration is also available for abdominal and cardiac scanning.

Advanced imaging features for high quality images to meet your need in various situations, such as clinic, academic, research and in the field

Satisfying equine presets for cardiac, abdominal, tendon and reproductive evaluation

Specialty measurement, calculation and annotation for each exam mode

Stunning image and convenient workflow

Compact and durable design for challenging conditions
