Alarm system Data loggers are available at orford.store

HOW MUCH IS YOUR PRODUCT WORTH TO YOU?

Eliminate stock loss for the fraction of the cost with a Bun Hygro Alarm compatible data logger.

The bun Hygro is a WiFi temperature and relative humidity (RH) recorder and alarm system. With the simple setup of your desired temperature parameters you can have alarms sent to you via txt message or email if your cabinet temperature rises above or drops below your desired temperature range.

Some Key Features

• Monitor your Refrigeration equipment remotely from your computer or mobile phone.

• Be notified via txt message or email if your cabinet temperature rises above or drops below your desired temperature range.

• Eliminate expensive stock loss from human error, power failure or component malfunction.

• Records temperature data automatically increasing staff productivity.

• Automatically download your data through WiFi at your desired set intervals or manually with the press of a button. No cords required.

• Very easy installation and setup, this product does not require any special tools or technical knowledge.

• Using as many Buns as you require, monitor multiple cabinets at the same time, all from the same screen application.

• Ultra low battery consumption using 2 x AA Batteries.
