THE ROLL-A-RAMP® ADVANTAGE / UNMATCHED WARRANTY

Why buy Roll-A-Ramp® over some other ramp?

The answer is simple: A ramp that is extremely strong and safe, yet lightweight; that rolls up and is portable enough to take anywhere.

Simply put, it is the most flexible, versatile, and portable ramp available.

Unlike other ramps that come in fixed lengths, Roll-A-Ramp® builds the ramp to your specific situation. Odd sized ramps needed? No problem!

Evaluate – Ship – Build

AVAILABLE ONLY WITH ROLL-A-RAMP®

Easily Expandable:

Add links to lengthen your ramp at any time. You are never stuck with the wrong sized ramp that you can no longer use.

Rolls Up:

Easy Portability! The only ramp on the market that easily rolls up.

Incredible Strength:

Holds up to 450 kg., the highest strength to weight ratio available!

Exceptional Traction:

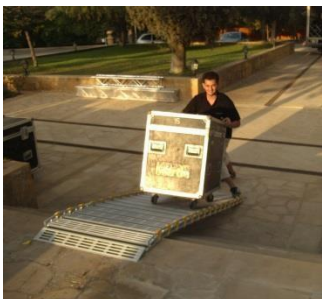

Non-Slip in any weather. Snow and rain drains through instead of collecting on ramp. Raised ridges built into the design run across each tread providing great traction that never wears out.

Access multiple levels with the same ramp:

The ramp's unique design makes it possible to go up multiple levels using the same ramp.

Removable Handrails:

Handrails can be added to one or both sides. Choose from continuous or multiple shorter sections with loops or straight ends.

ROLL-A-RAMP® USES

Home:

Portable & removable ramp instead of permanent wooden ramps

Public- Commercial:

Many older buildings are restricted from making structural modifications.

Roll-A- Ramp can provide disability access into a building without

*changing the structure. **Van Access:***

No expensive lowered floor conversion needed! Less costly than a lift!
