

Column Guard

Protecting Valuable Assets

Supporting columns are highly vulnerable to damage from vehicular traffic. In some cases their damage may compromise the structural integrity of the car park or warehouse and repairs can be expensive. It is not always practical to position pipework or columns in non-trafficable areas and therefore protection is required.

The Safe Direction Column Guard incorporates the strength and energy-absorbing characteristics of w-beam guardrail customised to suit site requirements.

Specifications

- Minimum radius: 500mm.
- Hot dip galvanised.

Features

- Available as single rail or double rail configuration.
- Available with in-ground or base plate posts.
- Available as full or semi-circle units.
- Can be modified for various internal clearances.
- Guardrails can be powder-coated for increased visibility.
