## EABO1

Automatic machine including mould pressing for the production of square kebabs.

## STANDARD VERSIONS

Kebab of section of 23mm
Length of the ingredients: 180mm
Weight: about 100g

Kebab of section 27mm Length of the ingredients: 180mm Weight: about 130g

Kebab of section 31 mm Length of the ingredients: 180 mm Weight: env. 170 g

Joining an automatic skewer **LOADER KAP** optimizes the productivity and reduces the labor force.

Cycle time of the machine: 20 seconds. Real productivity: 120 cycles/hour or about 1000 kg/hour for kebabs of 100gr.

The productivity depends on the quantity of staff, the organization of the line, the tools and the technical features of the kebabs to be produced.

This material is in conformity with the following directives and bills: Food contact: EC1935/2004, Good manufacturing practice: EC2023/2006,

Good manufacturing practice: EC2023/2006 Machines: EC2006/42, CEM : EC 2004/108  The pressing of the mould makes its introduction easier, it optimizes its filling and reduces the weight differences between the

kebabs.

- Easy to clean taking into account the food industry constraints.
- Working station to optimize the movements and moving of the operators.
- A touch screen makes the communication easier between the operator and the machine. The screen includes a self-diagnostic system displaying a picture of the faulty component for example.
