NETTING MACHINE

MF01

EMSENS designed a machine to put an elastic net automatically around food products. The innovation is that the net is pre-cut according to a defined length and before being put around the product. The cycle of this machine is completely automatic. The net used could be stored on bobbin or in bulk. With the MF01, the operator put manually the product into the machine before starting the automatic cycle.

Maximum productivity:
600 pieces/hour for a
280 mm product length.
The caliber of the product defines the machine specificities and cadence.

The productivity information is only indicative.
A study can be made with your specifications.

This material is in conformity with the following directives and bills:
Food contact: EC1935/2004,
Good manufacturing practice: EC2023/2006,
Machines: EC2006/42, CEM : EC 2004/108

Possibility to adapt the material according to the specific needs of the client.

- This machine is totally independent and flexible as the product' size can differ.
- The length net setting is easily made through the screen touch. No need to set the machine mechanically.
- Possibility to use different nets with the same settings.
- Easy to clean thanks to the design made according to agri-food requirements (EHEDG member).
- The ergonomics of the loading post optimizes gestures and movements of the operator.
- A screen touch allows a better communication between the operator and the machine with an intuitive interface equipped with a troubleshooting.
