

Introducing Stance Analyzer™

The Stance Analyzer™ will quickly become your clinic essential. Take the guesswork out of pain identification with objective data to show clear evidence of pain, track treatment progress, and make further treatment recommendations.

Objective Data

Objectively measure the percentage of weight your canine patient places on each limb to detect lameness early. This easy, non-invasive diagnostic tool provides you with the data to outline treatment recommendations, and monitor treatment progress.

- Assesses lameness
- Targets problem areas
- Printable progress reports
- Weight bearing, stability & center of gravity data

Proactive Intervention

Detect lameness earlier and provide proactive treatment solutions for your patients.

The Hub

Leverage the Stance Analyzer as a key component of your wellness and injury programs to gain client buy-in for recommended treatment programs.

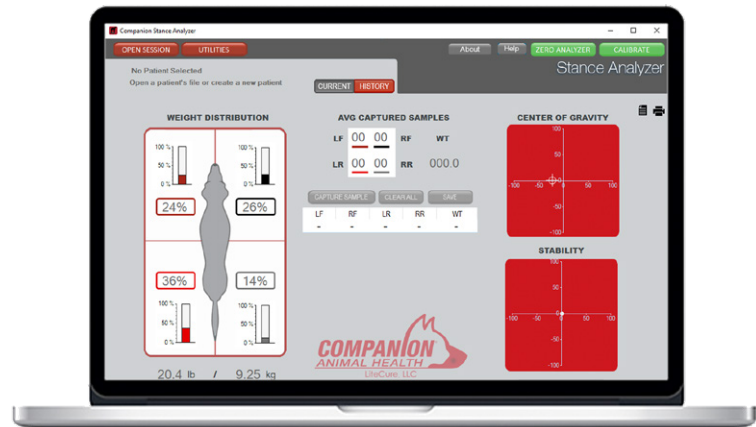

Utilise the visual reports from the Stance Analyzer™ to facilitate more effective client communication and treatment plan compliance.

Companion® Stance Analyzer™

Includes:

- Stance Analyzer™ software
- Laptop computer
- Stance Analyzer™ platform
- Remote control
- Training resources

The Companion® Promise

Evidence

Products based in evidence that provide superior clinical outcomes is Companion's commitment.

Education

Educational opportunities for every stage of your learning journey.
