COVID-19 RAPID ANTIGEN TESTS

Workplace Testing

IDEAL FOR PEOPLE SUSPECTED OF COVID EXPOSURE, OR AS AN EXTRA LEVEL OF SCREENING PROTECTION
COVID-19 RAPID TESTS CAN PROVIDE ACCURATE RESULTS IN 15 MINUTES.

BENEFITS OF A RAPID ANTIGEN TEST

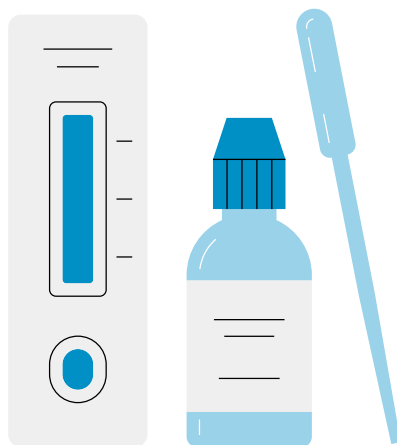

Antigen tests can detect COVID-19 during the first phase of the infection (the period where individuals are most contagious).

Detect an infection a few days prior to the first symptoms appearing, up to a week after the first symptoms.

Patient-friendly nasal sample collection devices minimise undesirable reflexes like coughing or sneezing.

Healthcare workers also have a reduced risk of infection thanks to reduced procedure times.

Antigen tests offer high performance compared to nasal PCR tests.
