Quality, Design and Innovation

As a specialist for fridges and freezers, Liebherr offers an extensive range of robust special appliances for commercial use. The unique quality, timeless design and innovation that characterise our products are expressions of our many years of experience in the manufacture of modern refrigeration. Every day, Liebherr appliances allow our customers to experience and benefit from the expertise we have developed over decades in the commercial field.

Quality

For more than 60 years, the name Liebherr has stood for high-quality and innovative fridges and freezers. Our focus, from the product conception to development and production through to marketing, is on offering innovative top-quality products. In the process, we consistently implement new product ideas for the perfect and safe storage of foods and of sensitive samples, medication or research materials in laboratory use. We are familiar with the specific requirements and know what is needed to ensure that you can rely on your professional fridge or freezer one hundred percent, 24 hours a day, and 365 days a year. We conduct checks as early as the development stage to ensure that all refrigeration, mechanical and electronic components function dependably and over the long term, and we also make sure that optimal operability and operational reliability of appliances is guaranteed. For example, in the quality test, door hinges must complete at least 100,000 opening cycles – equivalent to usage of over 15 years. A visual inspection of processing quality also occurs. This helps us to ensure the optimal compatibility of all components with one another: for maximum functionality and efficiency.

5 year warranty

All Liebherr commercial appliances have a full 5 year warranty covering parts and labour, 12 month on accessories and spare parts – for total peace of mind.

Design

Liebherr appliances for professional use are characterised by a specific combination of aesthetics and functionality. With their elegant and timeless design, the fridges and freezers meet the highest aesthetic standards. The high-quality look of our commercial appliances shows itself in many details: from stainless steel processing to a selection of high-quality materials and to the interior features. Thanks to their consistent design, our professional appliances can be easily combined and also really catch the eye.

Innovation

The constant development of our high-quality products is particularly important to us. That is why all Liebherr production sites have development centres with modern equipment and highly qualified employees. We invest in research and development because only then can we truly offer our customers top quality in the long term, while simultaneously meeting our own high standards. Our aim is to be “best in class” in every aspect. Innovations, whether in refrigeration technology, convenience or safety, have always been an important and supporting pillar in our history and will remain so in future as well. With great dedication and passion we work hard to incorporate innovations into our appliances in order to set new standards in the field of professional fridges and freezers. Last but not least, our appliances for commercial use are highly efficient thanks to state-of-the-art electronics combined with optimised cooling circuits, so they make a considerable contribution towards economic and ecological sustainability.

Save energy and act sustainably

As a family business operating globally, Liebherr bears great responsibility towards society, the environment, customers, employees and suppliers. Going beyond regulations and legislation, the environmental effects of products and production sites are reduced and kept to a minimum. This is why a responsible and sustainable approach to energy is especially important to Liebherr in all development processes.

Energy efficiency has always been a central issue for Liebherr, and it has a decisive effect even during the design of fridges and freezers for professional use. High-quality components allow the appliances to provide excellent cooling. Tailored for professional use, these components also help lower electricity costs. With our products, the concept of protecting the environment is taken into account throughout the life cycle. Liebherr was the first company to convert its entire range of professional fridges and freezers to CFC-free and HFC-free refrigerants. Since then we have been using the natural and environmentally friendly refrigerants R 290 and R 600a. In combination with powerful compressors and modern cooling components, they ensure that our appliances for professional use are particularly energy-efficient and economical.

The plastics used are marked for optimal recycling in accordance with our specifications – as per ISO 1043, and our production processes are also arranged for efficient resource use. We would like to have become climate neutral at our European production sites by 2030. We have already, within two years, been able to reduce our CO₂ emissions by 62 percent. At an early stage, suppliers and service providers are integrated into the current quality and sustainability standards. Our integrated management system serves to fulfil these requirements and to achieve the objectives sought. Its effectiveness is regularly checked by audits. All European Liebherr production sites are certified according to the international standards for quality (ISO 9001), environmental management (ISO 14001) and energy management (ISO 50001). Liebherr accepts responsibility for the environment and for society. In this context, sustainable management is of central importance to us in meeting the global challenges of our time.

Perfect quality assurance – logged temperature measurement

Whether for biotechnology, pharmaceutical research or healthcare, professional Liebherr fridges and freezers are used wherever stringent requirements for storage safety and temperature consistency apply. Integrated alarm systems document the temperatures, alert the user of deviations and offer optimum safety.

The dynamic cooling system in laboratory and pharmaceutical appliances, in combination with precise electronics, guarantees maximum temperature stability in the interior. In addition, very short defrost cycles avoid the risk of temperature spikes. Liebherr laboratory appliances are designed for optimal temperature stability and consistency as per EN 60068-3 in order to ensure the best storage conditions for sensitive samples and medication. They are also equipped with a volt-free contact to relay alarms to an external remote monitoring system. In addition, they feature a serial interface RS 485 for central documentation of temperature curves and possible alarm events. Up to 20 appliances can thus be connected to a central documentation and alarm system in order to provide greater safety. The integrated data memory documents and saves the min./max. values for up to 41 days.

Worldwide comprehensive service – long-term availability of spare parts

Liebherr service is characterised by a strong customer focus. The main aim is to ensure customer satisfaction through fast processing. The worldwide Liebherr customer service network provides competent experts on all matters relating to service – via email, phone or mail.

As a manufacturer of high-quality fridges and freezers for professional use, we want to live up to our standard of being a competent and reliable partner, and when it comes to servicing and customer service as well. That is what Liebherr customers expect from us, and we want to justify it with our performance. All incoming questions, whether asked in writing or in person, are recorded in our customer database and processed quickly by our customer service employees, who are highly qualified master craftsmen and technicians. We always aim to offer our customers the best possible solution.

Liebherr stands for reliability and durability. That is why we use only the highest quality materials and components in production. Every appliance is tested intensively for quality and functionality, even during the production process. We are always working to develop our appliances, optimise all components and process them properly to the last detail, so we can guarantee the proverbial Liebherr quality with the long durability of our appliances. And if you should still need a spare part for our appliances with their essentially maintenance-free design, you can rely on our service at all times. We provide only original Liebherr spare parts – in most cases for up to ten years after the appliance was purchased.

Verified quality for the highest professional standards

A great deal of know-how, development work and attention to detail is invested in every single Liebherr appliance. Before an appliance goes into series production, engineers have completed months of research and development to ensure that a high quality product is created which meets all the requirements of professional use.

As a premium manufacturer we have something essential in common with our customers: we set the highest possible standards for our appliances and components. The quality of Liebherr appliances is a solid foundation for the high level of trust that customers have in the Liebherr brand. At our production locations, we are working constantly on the further development and optimisation of all appliance components and materials. Our professional appliances and components undergo continuous quality monitoring throughout the entire production process. In order to guarantee these high standards of quality, we subject

all components to extreme loads in extensive and practical testing. In doing so, we ensure that only the highest quality appliances, which fully meet the particular requirements for commercial use, leave our production locations. Our highly-qualified and well-trained employees are also a central factor here. Thanks to their dedication and commitment, Liebherr continues to set high standards and guarantee outstanding quality. No wonder then that customers around the world are impressed by the durability of our fridges and freezers.

Good reasons to choose Liebherr

Highest performance

Liebherr appliances for the laboratory and pharmacy sectors offer constant cooling even in extreme ambient temperatures. The use of ultra-advanced components, high-performance and environmentally-friendly refrigerants, and precision controls ensures optimal storage for chemicals and research materials, medication and sensitive samples. Thanks to innovative hot-gas defrosting, they need to be defrosted less often. The process is also considerably quicker and temperature spikes are avoided. Optional documentation software continuously logs the temperature profile - and if required, warning systems alert the user when defined temperature limits are exceeded.

Efficiency

Highly efficient with low energy consumption: the precise electronic controller, the dynamic refrigeration system and highly effective insulation guarantee low operating costs and are eco-friendly as well. The high quality of the appliances guarantees long life and reliable operation and provides for economic and ecological sustainability.

Reliability

All laboratory appliances are designed according to the EN 60068-3 standard with regard to maximum temperature stability. They are specially constructed for intensive professional use and feature a very sturdy design - with highest-quality materials and perfect workmanship right down to the smallest detail. The exemplary quality of the appliances is ensured by elaborate tests. All electronic and refrigeration components are optimally coordinated - perfect for use in the laboratory and pharmacy sectors.

Easy cleaning

Hygiene and easy cleaning play a special role in research, in laboratories and in the medical sector. That is why Liebherr appliances feature, among other things, moulded inner liners with large radii that are convenient to clean. High-quality seals prevent condensation, dirt and dust accumulation. Robust castors ensure that the surfaces under the appliances can also be easily cleaned.

Safety

In order to meet the highest standards for reliability and precise temperature consistency, Liebherr appliances are equipped with integrated alarm systems: If unwanted temperature fluctuations occur, a visual and audible alarm provides a warning – as it does if the door is opened for more than 1 minute. A visual power failure alarm and a sensor defect alarm provide additional safety. The appliances can be connected via the volt-free contact to an external remote warning system – and up to 20 appliances can be networked with a monitoring and alarm system via the serial interface RS 485. In case of a power failure, the electronic controller is powered by a battery for 12 hours (on MKv and MKUv) respectively 72 hours (on LKPv and LGPv) to prevent data loss. The calibration option allows precise temperature control adapted to specific applications. On MKv and MKUv models all alarm parameters are pre-set as per the requirements of DIN 58345.

Easy servicing

Durability and reliability are given top priority in the material selection and development of Liebherr laboratory appliances. The exemplary quality and easy usability of the appliances are ensured by elaborate tests. In appliances with ceiling-mounted cooling components, these components are integrated in an easily accessible way. The door remains open at 90° and is self-closing at less than 60° for convenient use. The interior is easy to clean. The variable adjustment of grid shelves also allows optimum utilisation of the space. The separately controlled LED ceiling lighting on glass-door appliances ensures the best possible illumination. You therefore quickly gain an overview of the contents.

Maximum efficiency and safety at the lowest temperatures

Fridges and freezers used in laboratories and research have to meet particularly high requirements. This is why our devices have numerous functions and features – especially for safety, performance, temperature consistency and ease of use – to ensure ideal storage of sensitive samples, chemicals and research materials. And our new series of ultra-low temperature (ULT) freezers set new standards – especially in the $-40\text{ }^{\circ}\text{C}$ to $-86\text{ }^{\circ}\text{C}$ temperature range. Take advantage of the low operating costs, sustainable refrigeration, large interior space and numerous safety functions of the ULT freezers. Put your trust in our extensive experience as specialists in refrigeration and freezing. Our refrigerators and freezers offer you the safety that is essential in the laboratory and research sector – 24 hours a day, 365 days a year.

The advantages at a glance

Active Green

ActiveGreen

State-of-the-art refrigeration technology with climate-neutral refrigerants and lowest energy consumption thanks to, among other things, the extensive use of high-quality vacuum insulation panels.

Interior/storage shelves/inner doors

The interior, shelves and inner doors are made of rust-proof stainless steel and are therefore easy to clean. This enables optimum hygiene.

Flexibly positionable stainless steel storage shelves

Three storage shelves in the interior, which are freely adjustable at increments of 24 mm, offer flexibility for space-saving storage, tailored to your requirements. Further storage shelves can be added as an option.

Volt-free contact

Volt-free contact for relaying alarms to an external remote monitoring system – for more safety.

2x access ports, 28 mm

Two access ports on the upper left and lower left let you install external monitoring or data recording systems with separate sensors in the interior.

Integrated unloading ramp

No forklift necessary: The unloading ramp integrated in the packaging helps you easily position the appliance.

Door seal concept

The innovative door seal concept, comprising two separate multi-chamber profiled gaskets, enables fully sealed closure of the door. This also helps to reduce energy consumption. The seals can be replaced separately and without tools.

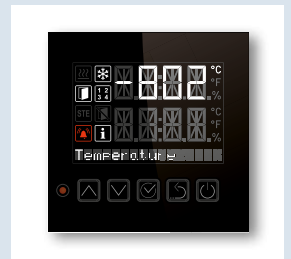

Detachable stainless steel inner doors

The detachable, rust-proof, stainless steel inner doors reduce the loss of cold air when the outer door is opened and are also easy to clean.

Alarm messages in critical situations

The three-stage monitoring system consisting of integrated alarm notifications for temperature, door or mains electrical faults, upgradable features such as CO₂ emergency cooling and online monitoring, ensure the very best protection for your stored items. In the event of a power failure, integrated 12-volt batteries immediately supply the controller with power. Notification is provided in critical situations.

Integrated controller

The intuitive controller with an integrated real-time clock has a temperature setting option accurate to 0.1 °C. The control and display panel is resistant to dirt and easy to clean. Flexible parameter adaptations, such as offset and alarm value settings, allow the appliances to be quickly and easily adapted to and qualified for your applications and requirements.

Highly efficient insulation

The combination of CFC-free PU foam with high-quality vacuum-insulated panels ensures the best possible insulation for preventing rapid temperature increases and ensuring low energy consumption.

Pressure relief valve

When the door is opened, the air exchange creates a vacuum which makes it difficult to open the door repeatedly. With the aid of the heated pressure relief valve, the vacuum is quickly equalised and the door can easily be opened again after just a few seconds.

SUFsg 5001

Quality right down to the smallest detail

Liebherr's ultra-low temperature freezers (ULT) set the benchmark in the temperature range $-40\text{ }^{\circ}\text{C}$ to $-86\text{ }^{\circ}\text{C}$: In terms of safety, performance and ease of use, they offer all you need for meeting the demanding requirements of laboratories and scientific institutions, for example. Take advantage of the low operating costs, sustainable cooling, the large interior with practical

Alarm messages in critical situations.

Don't worry about security: Thanks to a three-stage monitoring system, consisting of integrated alarm messages for temperature, door or mains faults, upgradable features such as CO_2 emergency cooling and online monitoring ensure the very best protection for your stored samples at all times. In the event of a power failure, integrated 12-volt batteries immediately supply the electronics with power. You will also be notified in critical situations so that you can quickly rectify the fault.

Low heat emission.

Compared to older technologies, the efficient cascade cooling system with HC refrigerants generates significantly less heat. This saves costs in the thermal design of the room's air conditioning system. If heat dissipation via the room air conditioning is not possible, the option with water cooling is also available.

Low energy consumption.

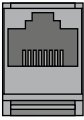

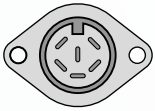

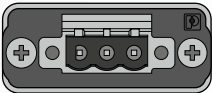

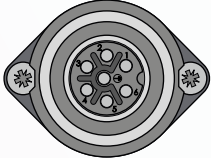

Ultra-low temperature freezers are among the appliances with the highest energy consumption in research facilities. Liebherr ultra-low temperature freezers are among the most economical models on the market worldwide. In combination with highly insulating vacuum panels, the efficient cooling system allows for efficient operation, optimum energy savings and, as a result, low operating costs.

features and the numerous safety functions of the ultra-low temperature freezers. Place your trust in our extensive experience as a specialist in cooling and freezing.

Mechanical key lock.

The mechanical key lock protects the stored products from unauthorised access. The door is opened with an ergonomic and unbreakable aluminium lever handle.

 Ethernet	 USB	 Output temperature
 Remote Alarm		 CO₂-Unit
24V/ Max. 2,5A COM N.C. N.O.		4-20mA

Interfaces.

For remote monitoring, all appliances are equipped with voltfree contacts and ethernet interfaces. The temperature and alarm records can also be read via the integrated USB interface. Optionally, a 4-20 mA output enables the integration of the temperature value into existing systems for data recording.

Minimal temperature fluctuations.

In order to maintain the quality of the stored samples, minimal temperature fluctuations are very important. The Liebherr ultra-low temperature freezers have the lowest possible fluctuations both internally within the appliance and over time.

Refrigerators and freezers for laboratories and research: Perfection is our benchmark.

Whether for biotechnology, pharmaceutical research or healthcare - our professional refrigerators and freezers for use in laboratories or in research are used wherever stringent requirements for storage safety and temperature consistency apply. Integrated visual and audible alarm systems offer optimum safety by showing the operating condition and any discrepancies. The precision electronics enable temperature adjustment down to the nearest degree - and, in conjunction with the highly efficient insulation and cooling system, create optimum storage conditions. High-quality materials and perfectly coordinated components and functional parts ensure the maximum quality, durability and lasting efficiency of our appliances. We settle for nothing but the best when it comes to laboratories and research.

The advantages at a glance

The **refrigeration components** are securely integrated in the ceiling area, allowing ready access.

The integrated data logger includes a **min/max temperature memory function**.

These appliances have an access port (7.0 mm in diameter) in the ceiling area to enable connection of an **independent temperature sensor**.

In case of power failure, the electronic controller is immediately powered by an **integrated 12 V battery**. As a result, the **integrated memory continues to log** the internal temperatures without interruption for another 72 hours.

The **smooth interior** made of 304-grade stainless steel is easy to clean and enables **optimum hygiene**.

To increase the **net capacity** of the inner liner, functional parts like fans and evaporators are located **outside** the refrigerator compartment to save space.

The **practical door** remains open at 90° and is **self-closing** at less than 60° for convenient use.

The LKpV 1420, LKpV 1423 and LGpV 1420 body can be split and reassembled for difficult delivery situations. This needs to be undertaken by a trained engineer. Contact sales for more information.

The state-of-the-art **controller** has an integrated real time clock and can be **set to 1/10°C accuracy**.

After a refrigerator or freezer door has been opened, a **vacuum** is built up by **air exchange** – with the effect that the door is hard to reopen immediately afterwards. The **integrated pressure relief valve** ensures that the vacuum is quickly equalised so that the door can easily be reopened.

The laboratory appliances are equipped with a volt-free contact for **alarm forwarding** to an external warning system.

Maximum temperature stability in the interior is ensured by the **dynamic cooling system** with two evaporator fans, in conjunction with optimal routing of the air flow.

If a **door is open** for longer than 1 minute, a visual and acoustic alarm is triggered. The temperature and power failure alarm indicates that the temperature is either exceeded or not met, and also warns in the event of power failures.

The **hot-gas defrost on demand with electronic control** avoids temperature spikes. To additionally improve temperature stability during defrost, the internal temperature is lowered slightly, shortly before the defrost starts.

The calibration function enhances validation and enables temperature control adapted to the specific application.

The LKpV and LGpV ranges **come with castors as standard** to allow versatile use depending on the available space and convenient cleaning also underneath the appliances.

LKpV 6520

Quality right down to the smallest detail

The Mediline range appliances are equipped with many features to guarantee the safety of stored products and temperature stability in the interior. High-quality materials and precise workmanship, extremely efficient refrigeration components as well

Integrated digital controller.

The intuitive controller with integrated real-time clock allows the temperature to be set to 1/10°C accuracy. The large display allows improved temperature visibility at a glance. The keyboard is dirt resistant and easy to clean – to meet the most stringent hygiene requirements in the laboratory.

Integrated alarm systems.

A visual and audible door alarm alerts the user to temperature deviations. An alarm is also raised if the door is open for longer than one minute or in the event of power failure.

Integrated data memory.

The min/max temperature memory function stores the values for up to 41 days. In addition the alarm memory function records the last 3 alarm conditions with alarm type, date and time, duration and maximum temperature.

External temperature and alarm documentation.

The laboratory appliances are equipped with a volt-free contact for alarm forwarding to an external remote warning system. In addition the appliances have an RS 485 interface which enables as many as 20 appliances to be networked with a central monitoring and alarm system.

Maximum temperature consistency.

Maximum temperature stability in the interior is ensured by the dynamic cooling system with double ventilation. Very short defrost cycles allow the internal temperature to be kept almost constant during the defrost phases. All laboratory appliances are designed according to the EN 60068-3 standard with regard to maximum temperature stability and consistency.

as documentation and alarm functions ensure optimum storage of sensitive samples, chemicals and research materials.

Accurate 1-point calibration.

The digital controller includes a calibration function for extremely accurate temperature control and display. This permits compensation between the set temperature and the actual internal temperature. Positive or negative changes to the correction value can be made in steps of 0.1 K.

72
hours

Mains-independent power supply of the electronic controller.

In case of power failure, the electronic controller is powered by a battery. The memory continues to log the internal temperature for another 72 hours.

If external alarm and monitoring systems have been connected, then data transfer to these is also maintained.

External temperature sensor.

The laboratory appliances have an access port (diameter 7.0 mm) in the appliance ceiling which allows a temperature sensor to be positioned in the interior.

Advantage of hot gas defrost

It is quick, with minimal temperature rise.

30 min

Electric defrost

10 min

Hot gas defrost

Energy-efficient hot-gas defrost system/

No temperature spikes.

Defrost less often and faster: the controller calculates the optimum defrost cycles based on the compressor run-time. Then the fridges defrost in just 8 minutes and the freezers in just 12 minutes. The internal temperature is slightly lowered shortly before so it remains almost constant during the defrost cycle.

Heavy-duty professional stable door.

Quick access, minimal cold loss, maintaining of product quality. Half-door appliances are ideal particularly with the frequent door opening which occurs in the pharmaceutical industry or the laboratory. Samples and compounds used more frequently are stored in the upper area for quick access while below there is plenty of space for materials and raw materials which are needed less frequently. Thanks to the stable doors with their self-closing mechanism, only a small amount of cold air escapes on opening and this helps to maintain temperature stability and therefore the quality of the goods stored over the long term.

³ Gradient as defined in EN 60068-3: the difference between the warmest and coldest average measurements, increased by their expanded uncertainty, throughout the duration.

⁴ Max. fluctuation as per EN 60068-3: greatest fluctuation value determined throughout the duration of measurements.

The advantages at a glance

Volt-free contact for forwarding alarms to an **external remote warning system**.

The **commercial-grade moulded polystyrol inner liner** is exceptionally easy to clean and enables **optimum hygiene**.

The sturdy, **plastic-coated grid shelves** have a **loading capacity of up to 45 kg**, are easily adjustable in height and can be removed at a door opening angle of 90°.

Access port for integration of the optionally available **temperature sensor** or **independent temperature sensor PT 100** or similar measuring instruments.

In laboratory fridge-freezer LCv4010, the **drawers** can be removed easily using the **recessed grips** integrated on the sides. The drawers have a transparent front to provide a clear view of the goods.

The **integrated lock** is exceedingly sturdy and protects the stored products against unauthorised access.

The **precise electronic controller** with digital temperature display allows accurate temperature setting to 1/10°C. An **integrated data memory** logs the last three temperature alarms and power failures, together with the time, date and duration of the alarm. The respective data can be recalled using the AlarmLog function and read on the display panel.

Laboratory fridges LKv 3913 and LKUv 1613 with a **glass door** feature and **efficient LED interior light** with a separate switch.

1-point calibration for accurate temperature control. This permits compensation between the set temperature and the actual internal temperature.

Self-closing doors prevent cold loss and contribute to the **temperature stability** of the appliances. The integrated lock is very sturdy and protects the samples and products against unauthorised access.

The **dynamic cooling system** in conjunction with the **precise electronic controller** ensures maximum temperature stability and high temperature consistency in the interior.

No more defrosting thanks to **NoFrost technology** (only for LGv appliances). Recirculated air cooling binds humidity to the evaporator, while short cyclical defrosting phases ensure that it is conducted out of the interior. And the advantage of this? Unlike with manual defrosting, the tedious task of moving sensitive cooled goods around is no longer necessary – for convenient, safe and ice-free storage.

**No
Frost**

Quality right down to the smallest detail

Liebherr Mediline laboratory fridges the ideal solution for a small footprint or for under-worktop integration. The range comprises two freestanding and under-worktop fridges with a glass door or a solid door. The precise electronic controller enables temperatures to be set accurately. The dynamic cooling system ensures high temperature consistency. Integrated alarm systems guarantee safe storage.

External temperature and alarm documentation.

The laboratory appliances are equipped with a volt-free contact for alarm forwarding to an external remote warning system, as well as with a serial interface RS 485 which enables central documentation of temperature profiles and alarm events. LTM documentation software is optionally available.

Maximum temperature consistency.

The dynamic cooling system in conjunction with the precise electronic controller ensures maximum temperature stability. All laboratory appliances are designed according to the EN 60068-3 standard with regard to optimum temperature consistency.

Safety thermostat.

The appliances with electronic controllers are equipped with an additional safety thermostat to prevent temperatures dropping below +2°C and to protect sensitive products in the event of a fault.

External temperature sensor.

The laboratory appliances have an access port (diameter 10 mm) on the rear which allows the temperature sensor to be positioned in the interior.

The advantages at a glance

The laboratory appliances are equipped with a volt-free contact for **alarm forwarding** to an external remote warning system.

Access port for integration of an **independent temperature sensor** (e.g. an optionally available temperature sensor or similar measuring instruments) in laboratory appliances.

The **commercial-grade moulded polystyrol inner liner** is exceptionally easy to clean and enables **optimum hygiene**.

The **glass shelves** of the laboratory fridges with spark-free interior are **height adjustable** and can easily be removed at a door opening angle of 90°.

The **drawers** in the LCexv laboratory fridge-freezer can easily be removed by the handles recessed in the sides. The drawers have a transparent front providing a **clear view of the products stored inside**.

The **electronic controller** with digital temperature display allows **accurate temperature setting to 1/10°C**.

The large display allows improved temperature visibility at a glance.

All laboratory fridges and freezers with **spark-free interior** are tested according to the 2014/34/EU (ATEX) Directive.

The **precise electronic controller** has an **integrated data memory**. It logs e.g. the maximum and minimum internal temperatures.

Laboratory appliances with a **electronic controller** provide **1-point calibration** for accurate temperature control. This permits compensation between the set temperature and the actual internal temperature.

The **self-closing door** prevents unnecessary cold loss and contributes to the temperature stability of the appliances. The **integrated lock** is very sturdy and protects the samples and products against unauthorised access.

Door seals can be replaced.

Quality right down to the smallest detail

Liebherr provides fridges and freezers with spark-free interior especially for storing explosive and highly flammable substances in labs and in the chemical industry. The inner liners meet the safety requirements of the EU Directive 2014/34/EU (ATEX) and have been tested according to the EN 1127-1, IEC 60079-0 and IEC 60079-15 standards by elecosuisse -

Certified according to ATEX.

All appliances with spark-free interior are tested according to the 2014/34/EU (ATEX) Directive. Rated as II 3G Ex nA II T6, these appliances are suitable for storing explosive and highly flammable substances in sealed containers.

The electronic controller.

The precise electronic controller with digital temperature display enables temperatures to be set accurately to 1/10°C. Symbols indicate the operating status of the appliance. The electronic controller is flush-mounted and equipped with a membrane keyboard for perfect hygiene. The large display allows improved temperature visibility at a glance.

Integrated alarm systems.

Visual and audible alarm systems alert the user to undesired temperature deviations or when the door is open. All alarm parameters can be individually set. For example, the door-open alarm delay can be adjusted between 1 and 5 minutes. Furthermore, the laboratory appliances with electronic controls have a visual power failure alarm and a sensor defect alarm.

Integrated data memory.

The electronic controller is equipped with an integrated data memory which logs the maximum and minimum internal temperatures as well as the last three temperature alarms and power failures, together with the time, date and duration. These data can be read out on the display.

SEV (Swiss Association for Electrical Engineering, Power and Information Technologies), an approved ATEX conformity evaluation organisation.

Accurate 1-point calibration.

The laboratory appliances with electronic controls have a 1-point calibration function for accurate temperature control. This permits compensation between the set temperature and the actual internal temperature. Positive or negative changes to the correction value can be made in steps of 0.1 K.

External temperature and alarm documentation.

The laboratory appliances are equipped with a volt-free contact for alarm forwarding to an external remote warning system, as well as with a serial interface RS 485 which enables central documentation of temperature profiles and alarm events. LTM monitoring software is optionally available.

Maximum temperature consistency.

Maximum temperature stability is ensured by the cooling systems of the laboratory fridges and freezers in conjunction with the electronic controller. The fridges are equipped with a safety thermostat to prevent temperatures below $+2^{\circ}\text{C}$ in case of a fault. All laboratory appliances with electronic controls are designed according to the EN 60068-3 standard with regard to maximum temperature stability and consistency.

Sturdy glass shelves.

The sturdy glass shelves are easily adjustable in height and can conveniently be removed at a door opening angle of 90° . They ensure secure positioning of the refrigerated or frozen products and have a loading capacity of up to 40 kg in the refrigerator compartment and up to 24 kg in the freezer compartment.

External temperature sensor.

The laboratory appliances with electronic controls have an access port (diameter 10 mm) on the rear which allows the temperature sensor to be positioned in the interior.

² Gradient as defined in EN 60068-3: the difference between the warmest and coldest average measurements, increased by their expanded uncertainty, throughout the duration.

³ Max. fluctuation as per EN 60068-3: greatest fluctuation value determined throughout the duration of measurements.

The advantages at a glance

Convenient **opening of the door** requiring little force: The ergonomically designed **lever handle** enables smooth opening of the door with less shaking of the appliance.

The **moulded polystyrol inner liner** with large corner radii is exceptionally easy to clean and enables **optimum hygiene**.

The **sturdy glass shelves** are easily adjustable in height and can conveniently be removed at a door opening angle of 90°. They ensure secure storage and have a **loading capacity of up to 40 kg**.

The **integrated lock** is exceedingly sturdy and protects the stored products against unauthorised access.

Sealed defrost water drain in the laboratory appliances with spark-free interior for compliance with the ATEX Directive 2014/34/EU.

Reversible door hinges in the LKexv models enable individual adaption to space conditions. The door seals can also be easily replaced as required.

Quality right down to the smallest detail

Certified according to ATEX.

The LKexv models are labelled clearly and permanently on the outer housing in accordance with the ATEX Directive 2014/34/EU, including information for cleaning. Rated as II 3G Ex nA II T6, these appliances are suitable for storing explosive and highly flammable substances in sealed containers.

Hygienic interior for versatile use.

The commercial-grade moulded polystyrol inner liner is exceptionally easy to clean and enables optimum hygiene. The moulded trayslides prevent the glass shelves from tipping and allow them to be varied in height.

Glass shelves.

The glass shelves ensure secure storage even for small items and have a loading capacity of up to 40 kg.

Water tray.

The defrost water drain in the laboratory appliances with spark-free interior is sealed for compliance with the ATEX Directive 2014/34/EU. The defrost water obtained during the automatic defrost cycle is collected in a tray which has to be emptied manually at regular intervals.

U-shaped trayslides and plastic-coated shelves

Additional U-shaped trayslides and plastic-coated grid shelves can be retrofitted as required to provide extra storage options. The sturdy grid shelves have an extremely high loading capacity of up to 60 kg.

U-shaped trayslide, left - LKPv, LGPv	YL9001757
U-shaped trayslide, right - LKPv, LGPv	YL9001761

Product temperature sensor

A product temperature sensor for logging product temperatures is available as a retrofit kit for the laboratory appliances with electronic controller. The logged product temperatures can either be read by the electronic controller or transferred to an external documentation system via the existing RS 485 interface.

NTC temperature sensor - LGPv, LKPv, LCv, LGT	YL9590407
NTC temperature sensor - LGv	YL9591493
NTC temperature sensor - Spark-free with Compact Controls	YL9590145

Additional lock barrels

Up to 10 additional lock barrels to protect the stored products against unauthorised access are available as accessories for the laboratory appliances with electronic controller. In case of multiple appliances, different locks can be installed to ensure that the respective appliance can only be accessed by the staff members responsible for it.

Foot-pedal door opener

The optional foot-pedal opener is useful when you don't have a hand free.

Foot pedal opener - LKPv65, LGPv65	YL9590659
------------------------------------	-----------

Roller bars

In order to guarantee optimum stability, roller sets must not be fitted to appliances which are installed using a connecting frame. This is only permitted for individual appliances.

Roller set - LKUv, LKUxv, LGUx	YL9590521
Roller set - LKv, LKxv39, LGex	YL9590380
Roller set - LCv, LCxv	YL9592756

Adjustable legs

30 mm high roller sets can be retrofitted to the under-worktop LKUv models and height-adjustable legs can be retrofitted to the upright LKv models. The legs are adjustable between 115 mm and 170 mm in height.

Adjustable Legs Set - LKxv5400	YL9590229
Adjustable legs set - LKxv26/36, LKxv3910, LGex, LKv	YL9590231

Shelves plastic-coated

Additional plastic-coated grid shelves can be retrofitted as required to provide extra storage options. The sturdy grid shelves have an extremely high loading capacity of up to 60 kg.

Shelf, White-coated - LKv 5710	YL7113485
Shelf, White-coated - LGv5010	YL7113475
Shelf, White-coated - LKv, LKUv, LCv	YL7113333
Shelf, White-coated - LKPv, LGPv	YL7112393

Glass shelves

Additional glass shelves can be retrofitted to the LKexv models as required to provide extra storage options. The glass shelves made of toughened safety glass meet the standards for spark-free fridges in accordance with ATEX and have a loading capacity of up to 40 kg.

Shelf, Glass - LCexv, LKexv39, LKUexv	YL9293629
Shelf, Glass - LKexv 5400	YL9293613
Shelf, Glass - LKexv3600/2600	YL9293615

Castor base

A castor base is available as an accessory for the LKexv 5400, 3600 and 2600 models to allow flexible use of the appliances in different rooms.

Castor base	YL9086365

Optional accessories provided by Andi-Co

Logtag data logger

The UTRIX-16 stores real-time temperature readings over a measurement range of -30°C to +70°C (-22°F to +158°F), displays user-configurable alerts, and comes with an integrated, long-life USB connector.

LogTag USB Data Logger

XUTRIX-16

Clever Logger

Innovative datalogger that provides an accurate "live" log of temperatures to any internet device (computer, tablet, phone) anywhere in the world.

The Clever Logger website also provides immediate alerts about problems and automatic reports to your email inbox.

A gateway is required to be paired with a temperature logger in order to receive information from the sensor.

Multiple temperature loggers can be paired with the one gateway.

Our catalog program

Liebherr commercial appliances can be found at specialist retailers where providing first-class service and expert advice is their top priority.

You will find an overview of other Liebherr appliances in our catalogue of fridges and freezers for professional use. Available in stores or on home.liebherr.com.au

BIM data available with immediate effect

The cooperation between Liebherr-Hausgeräte and Specifi® gives planners and dealers worldwide access to a digital Liebherr-Hausgeräte library with BIM models for the Food Service and Scientific areas. Compatible with AutoCAD® and Revit. home.liebherr.com/bimdata
