Industrial and Automotive Crates

12.5, 20, 25, 50 litre capacity

Designed originally to meet the needs of the automotive industry these particularly strong and rugged containers are used for handling components in a wide range of heavy manufacturing and assembly line situations. All four are pallet compatible and special reinforcing columns allow them to be stacked when full. The base is also strengthened to withstand the punishment so often meted out by conveying systems, and a special design feature prevents both buckling and climbing over when crates back-up on a line. Smooth inbuilt hand grips to make for easy lifting. The new 12.5 Litre crate is available with a label holder that can be fitted to one or both sides of the crate. Ideal for easy application and security of can-ban label holders. Made from tough, durable polypropylene they are UV resistant and will give a long service life in tough industrial environments. Hot stamping is available for company identification and whilst the standard colour is grey others are available where volumes permit.
