GREEN THINKING WITH HAINES®

OK Compost

Packaging or products featuring the OK Compost label (based on European standard EN 13432: 2000) are guaranteed as biodegradable & compostable in an industrial composting plant and applies to all components, inks and additives. Any product featuring the OK compost logo complies with the requirements of the EU Packaging Directive (94/62/EEC)

What is the EN13432 standard?

The criteria for the industrial compostability of packaging are set out in the European standard EN 13432. EN 13432 requires the compostable plastics to disintegrate after 12 weeks and completely biodegrade after six months. That means that 90 percent or more of the plastic material will have been converted to CO₂. The remaining share is converted into water and biomass – i.e. valuable compost. Materials and products complying with this standard can be certified and labelled accordingly.
