

A close-up photograph of a grey, looped PVC sanitising mat. A black rectangular label with the word 'HACCPER' in white capital letters and a red dot is attached to the mat. The background is a blue geometric pattern.

HACCPER[®] SANITISING MAT

TGA No. 298947

Patent No. 2018900099
Australian Design 201810265

New food grade Sanitising boot dip mats. The Haccper[®] mat height is 19mm and has a low sloping bevel making trolley access a breeze. Flexible pvc loop inside the dam edge allows the users footwear to sink to the bottom of the mat and totally immerse the bottom of the shoe. The inner loop style PVC acts as a baffle through the entire mat and reduces swish and splash often associated with conventional boot dip mats. Reducing splash wastage decreases the use of extra sanitising fluid.

Sanitising the wheels on push trolleys is vitally important and can now be easily done by pushing over the low sloping bevel on the Haccper[®] mat, containing sanitising fluid. The mats are manufactured from PVC ensuring long term use and resistance to disinfectants. Will not leave ugly black marks on wet floors.

**HACCPER Sanitising Fluid recommended for use with
HACCPER Sanitising Mat. Available from AMCO.**

Creating Great Days

BENEFITS

- Low sloping bevel for easy trolley access.
- Low sloping bevel to reduce slips trips and falls.
- Will not leave black marks on wet floors.
- PVC loop reduces splash wastage and helps loosen foreign debris.
- Large floor size to save purchasing 2 of the conventional boot dip mats.

FEATURES

- Non-splash sanitising mat.
- Extra Super bevel for easy access on and off the mat.
- PVC formula ensuring long term use with disinfectants, etc.
- Holds 9 Litres of sanitising fluid.
- TGA number: 298947

APPLICATIONS

- Food and beverage manufacturing
- Hospitals
- Sterilizing facilities
- Sterile Safety Zones
- Biological Hazard Compliance
