

## ELIMINATE POOL ODOUR, SCUM AND GERMS AT THE SOURCE

Leaving your pool smelling fresh, clean and germ free

We often underestimate what we introduce into our pools. Statistically, every swimmer leaves approximately 455g of inorganic matter for every one hour in the pool. These residues can coagulate and coat the filter media leading to extra cleaning, poor efficiency, or the need to replace.

Prolonging the life of equipment such as filters, a reduction in cleaning and maintenance will be evident as the Desolve formulation works to remove debris and film. It will also reduce the use of other chemical cleaners that tend to shorten the life on such items as cartridges or grid elements.

Foaming will be eliminated. Water clarity will be noticeably improved, and a softening of the water will be achieved.

### PERFECT SOLUTION FOR:

- Reducing chlorine use
- Lingering odour
- Germ elimination
- Replacing chemicals
- Reducing risk of infection
- Algae prevention
- Filters and pipework
- Scum

## BENEFITS

- Rapid removal of odours by treating the root cause
- Removes germs on all exposed surfaces
- Effective against mould, fungi and Volatile Organic Compounds including Ammonia found in cleaning chemicals
- Stops microbes reforming by eliminating the food source

**1 litre concentrate treats 1m litres**
