## Submersible Turbine Pumps

## TS series

### 5" through to 18" Submersible turbine pumps

The Sterling TS series of submersible pumps are a broad family of engineered pumps offering reliable and efficient pumping of water in many applications.

- 5": 40 m<sup>3</sup>/h
- 6": 17, 40, 60 and 85 m<sup>3</sup>/h
- 7": 60, 72 and 100 m<sup>3</sup>/h
- 8": 90, 150, 200 and 230 m<sup>3</sup>/h
- 10": 250, 280, 350, 440 and 550 m<sup>3</sup>/h
- 12": 800 m<sup>3</sup>/h
- 14": 1100 m<sup>3</sup>/h
- 16": 850 m<sup>3</sup>/h
- 18": 1100 m<sup>3</sup>/h

### Features

- All Sterling Pumps are 100% factory tested
- All feature built in Check Valve
- Couplings to NEMA standard
- BSP and flanged discharges
- Maximum water temperature is 30°C, higher temp available
- Submergence rating – refer model chart
- Maximum solid handling – refer to model chart
- Stainless Steel 431 shafts
- Due to many material combinations to suit the pumped fluid, bearings, impeller and elastomer materials are matched to the duty and main construction materials

## Material options

- Cast Iron
- 316 Stainless Steel
- Carbon Steel
- Zinc Free Bronze
- Nickel Aluminium Bronze
- Duplex and Super Duplex stainless steel
- Zeron 100

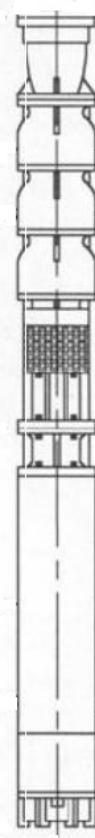

## Nomenclature-Ordering:

- TS = Series
- 8 = nominal pump bowl diameter
- 230 = nominal flow as metres per cubic metre
- 5 = number of stages

Turbine with  
shroud**

### **Submersible Turbine Inline Booster**

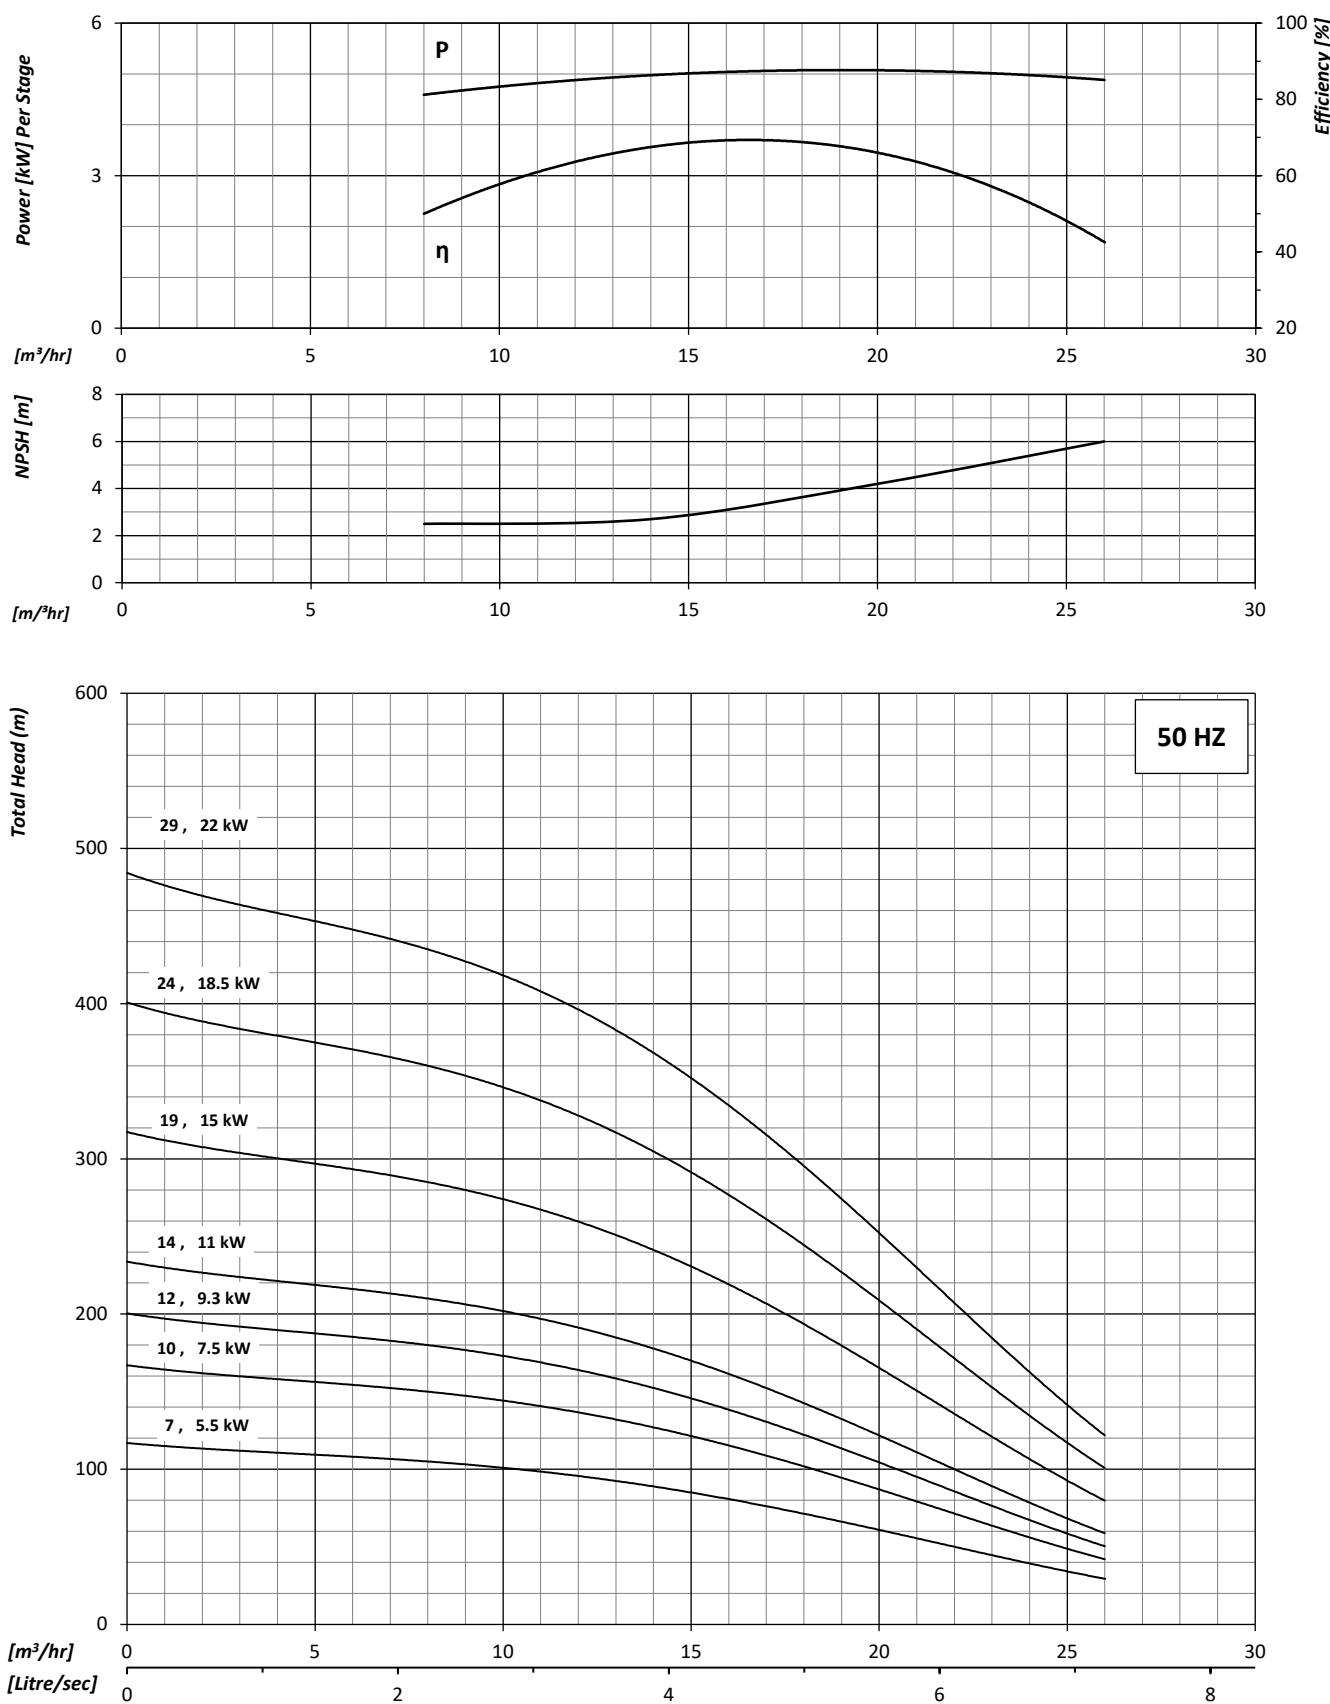

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

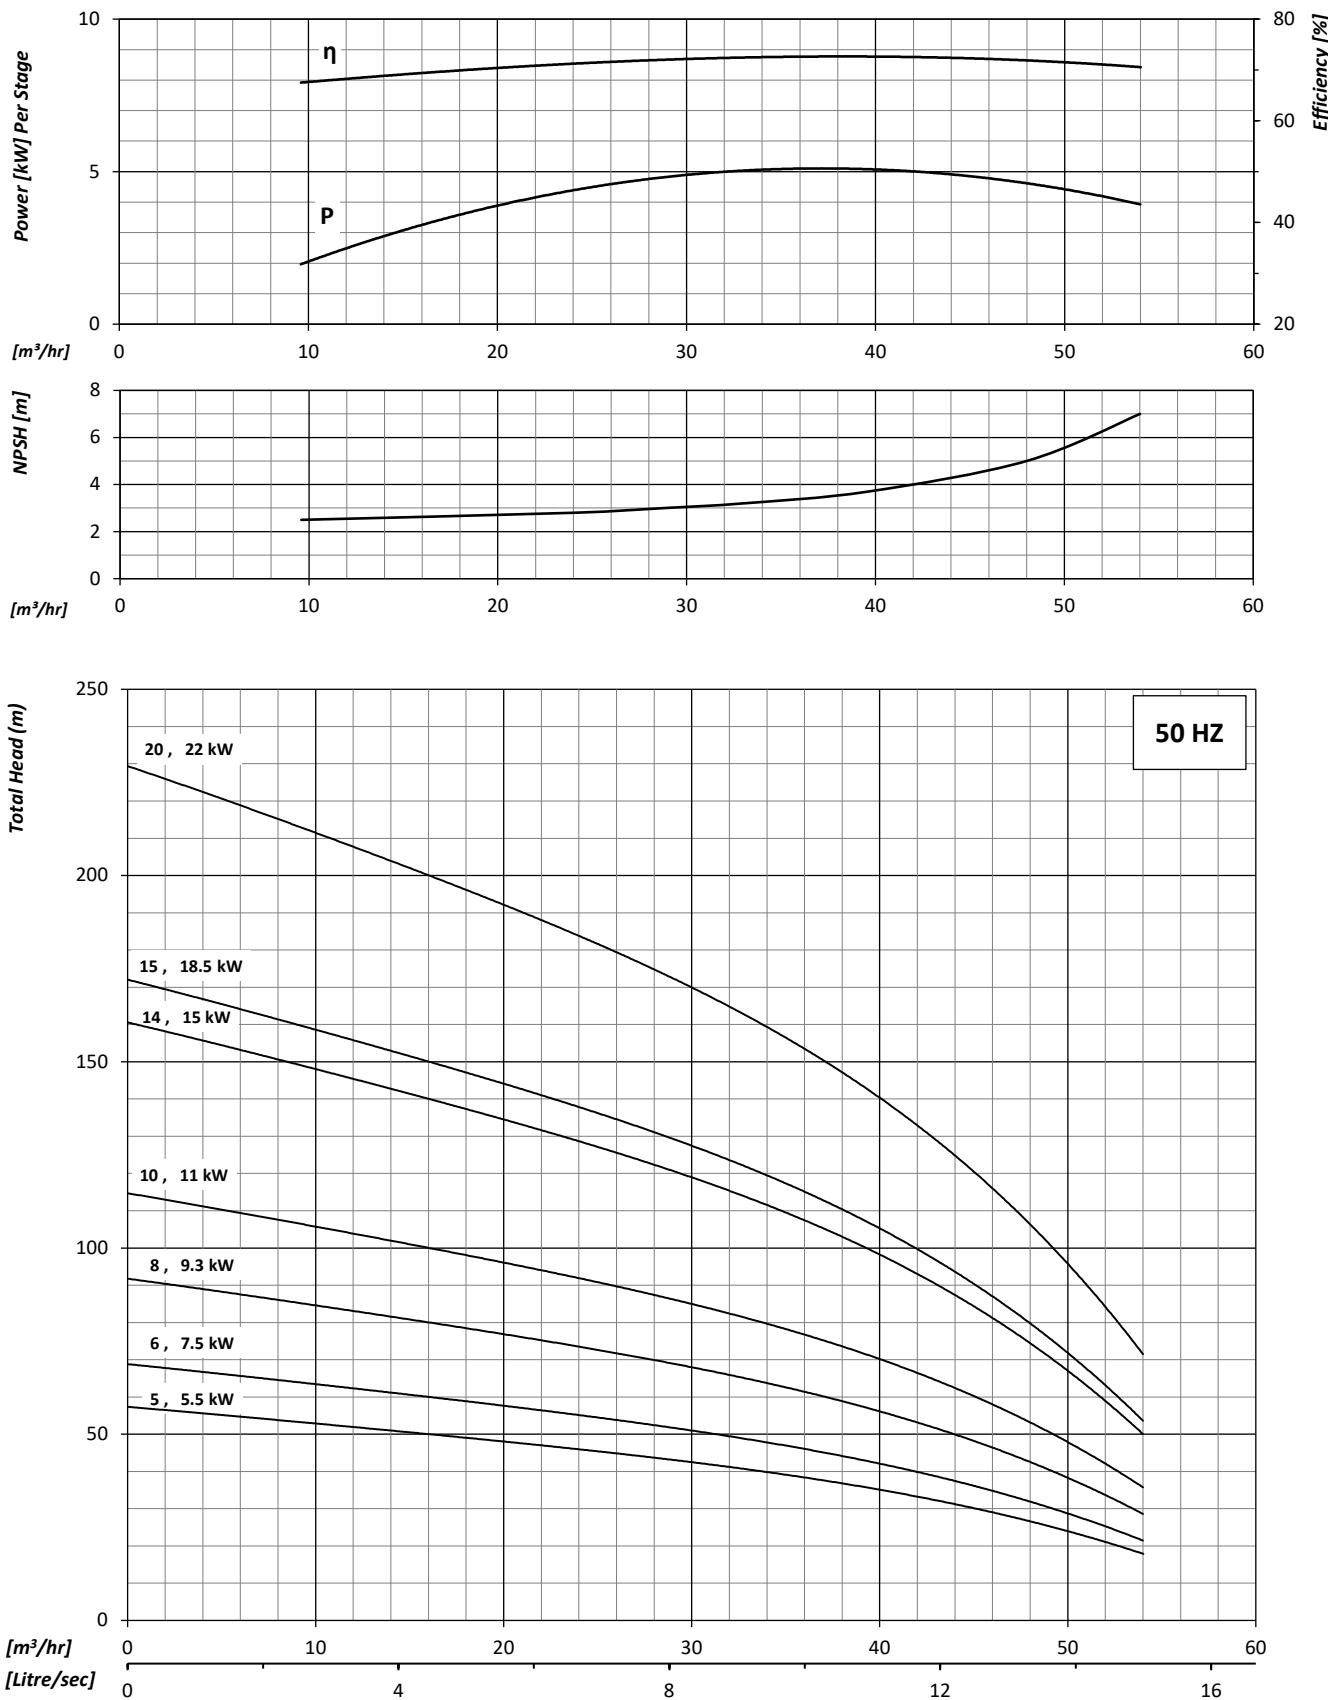

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

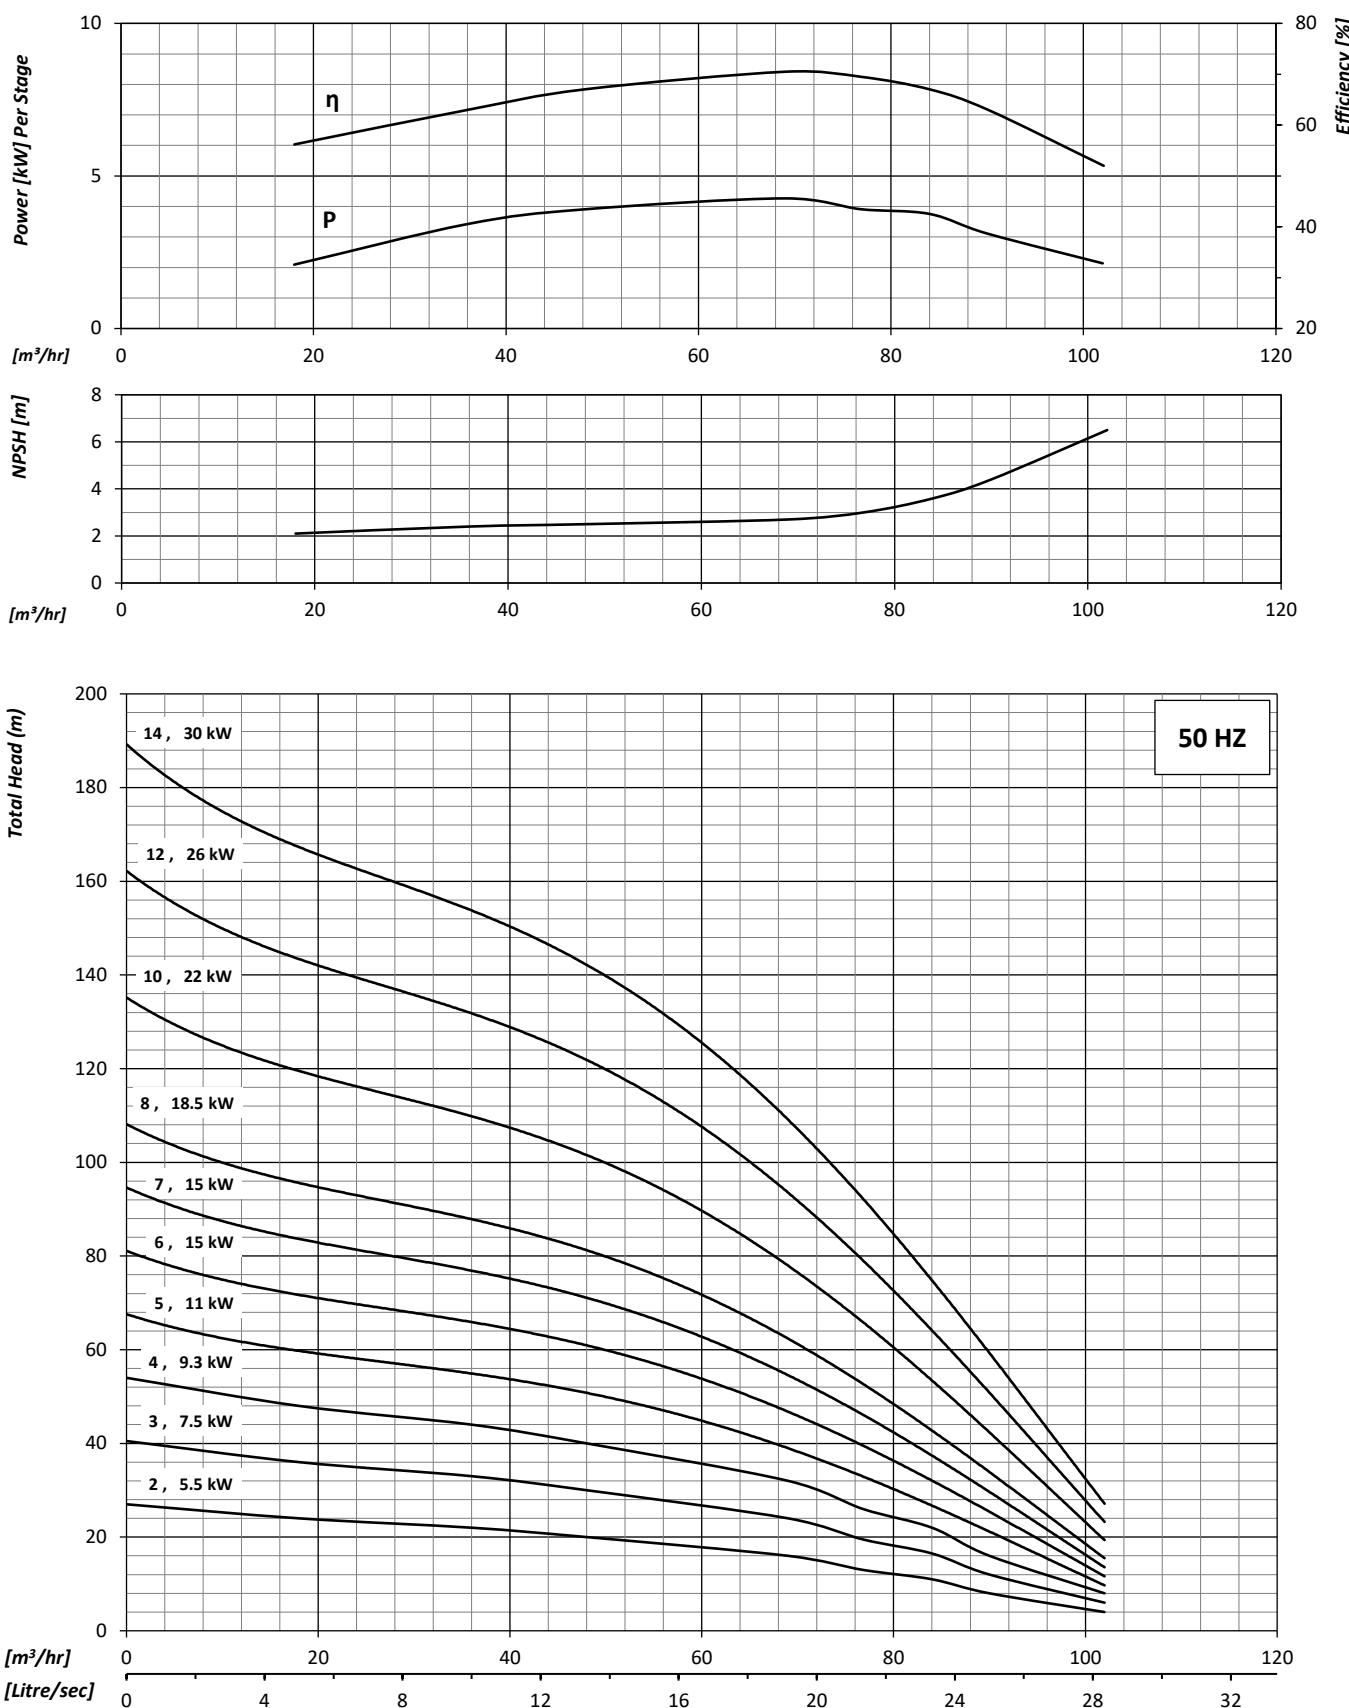

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

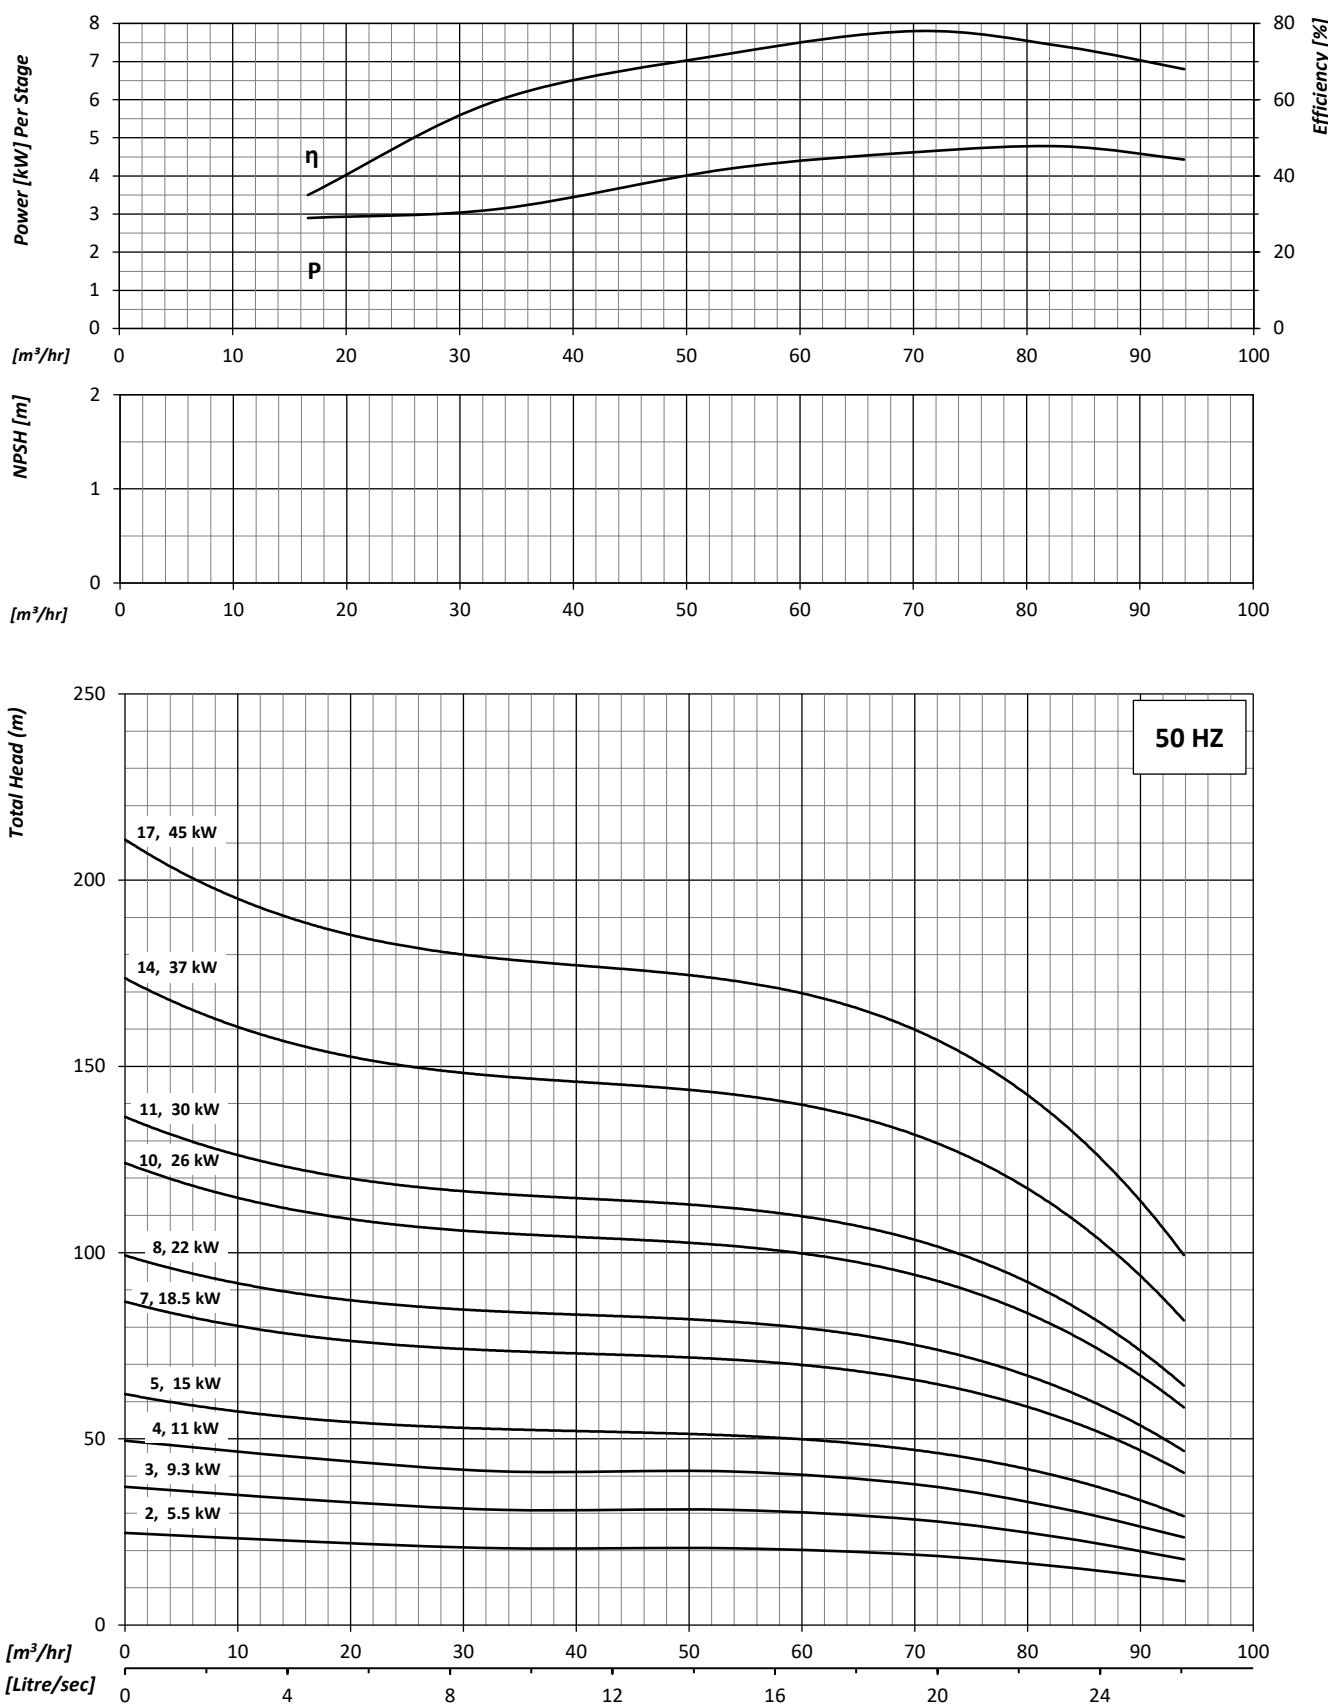

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

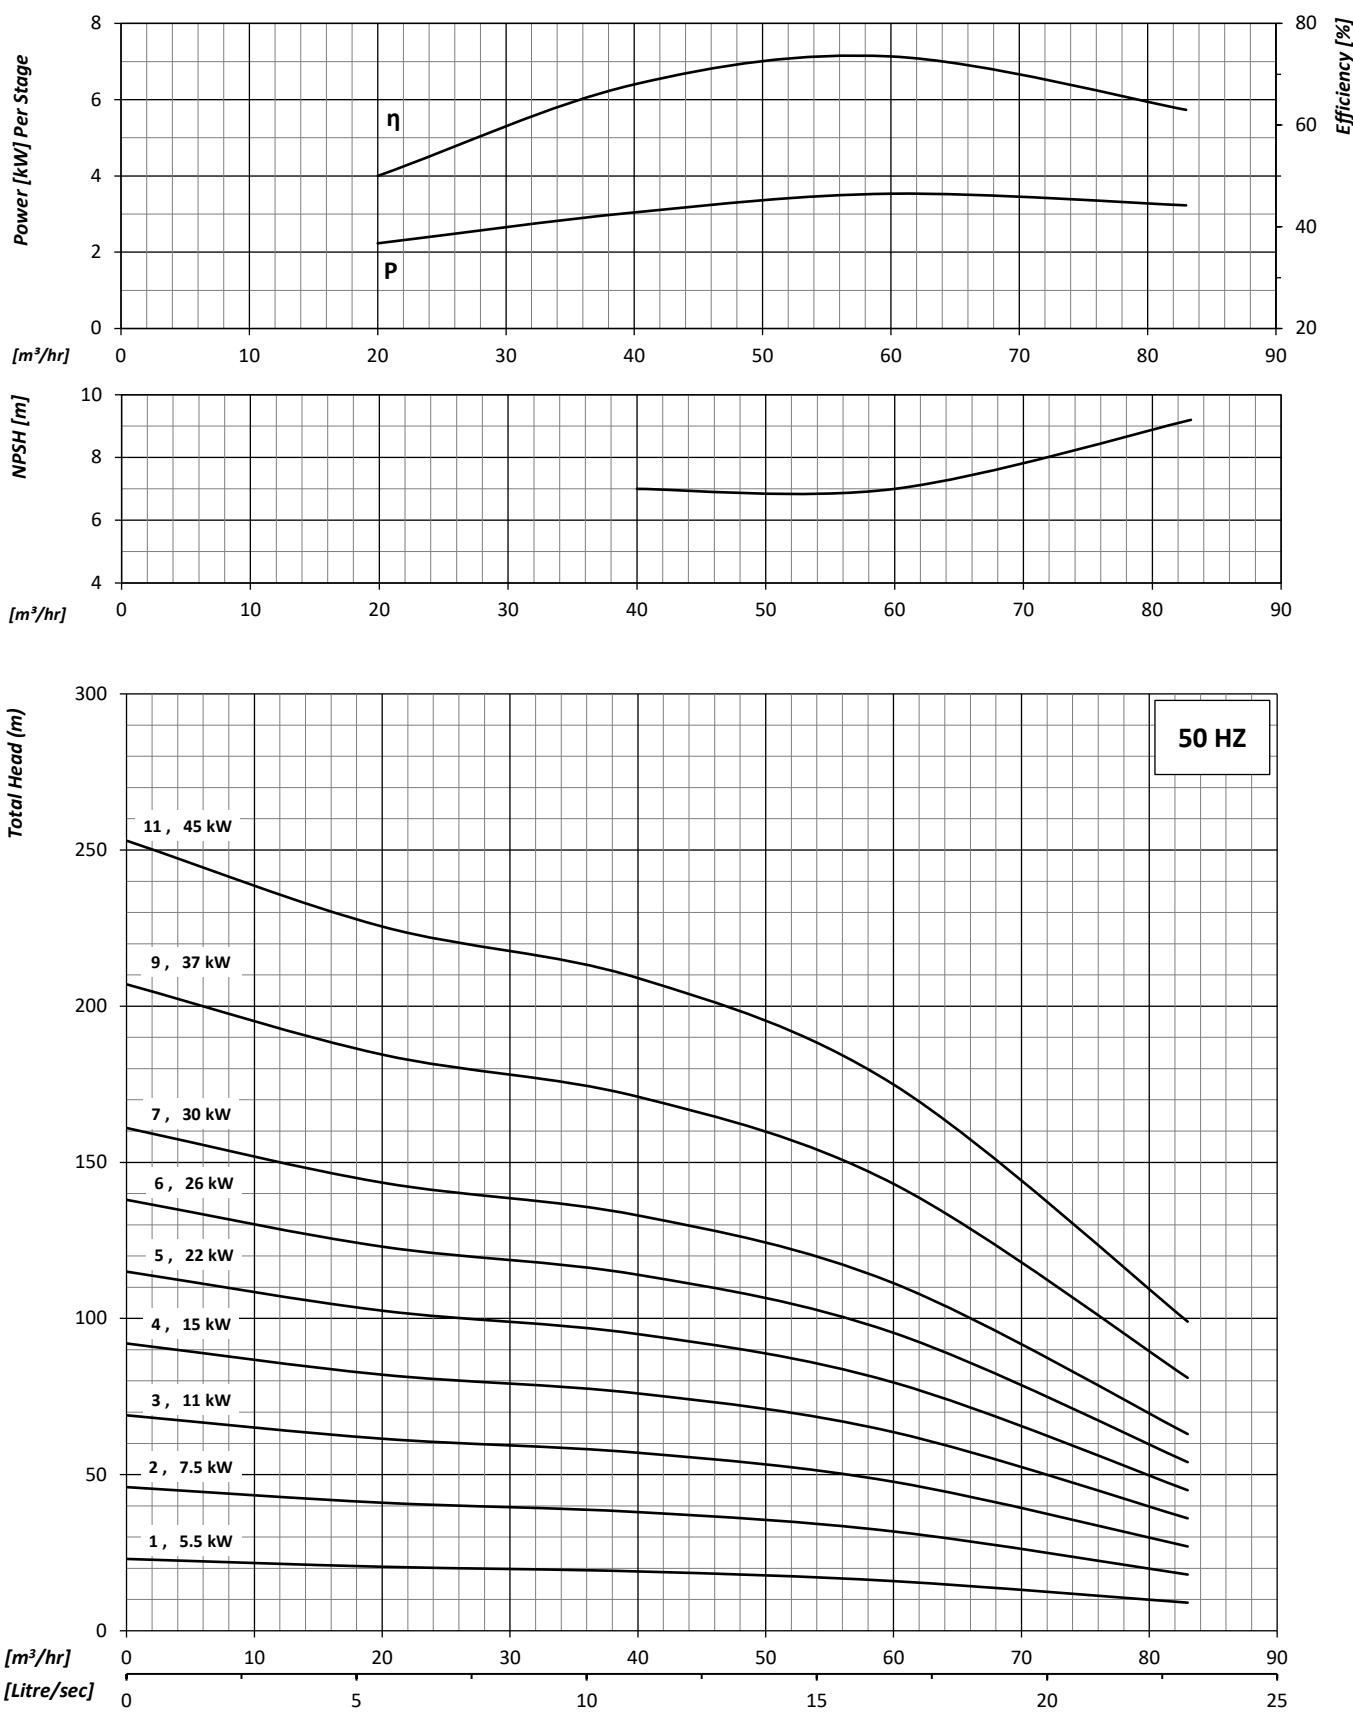

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

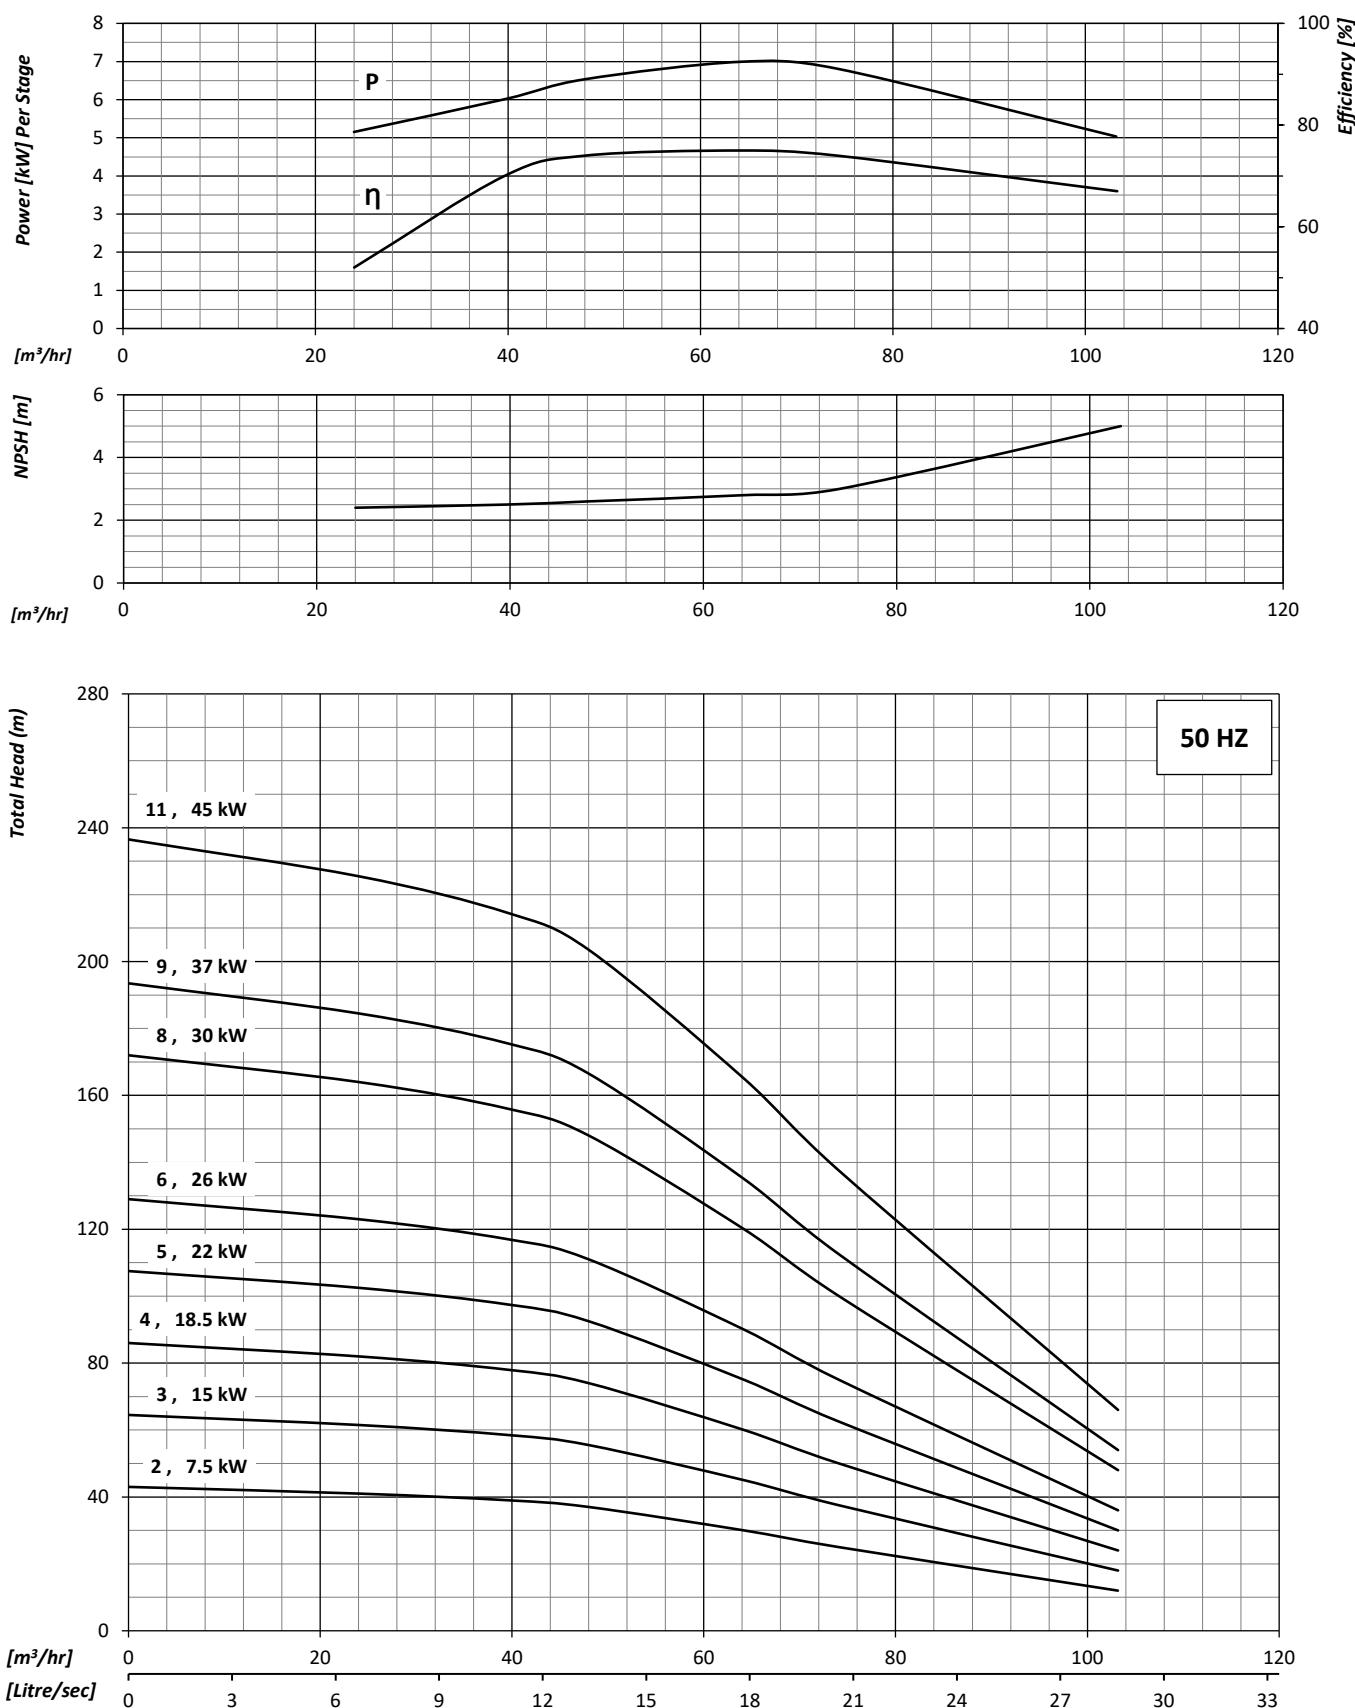

Performance curves are drafted based on pumping clean water (S.G. of 1.0 g/cm<sup>3</sup>) at temperature of 20 °C.

Pump performance comply to ISO 9906 gr. 3b.

Indicated efficiency values are valid for pumps in 3 stages or more.

Consult with factory for curves at different speeds or trimmed impeller diameter.

## Submersible Column

### Flanged Column

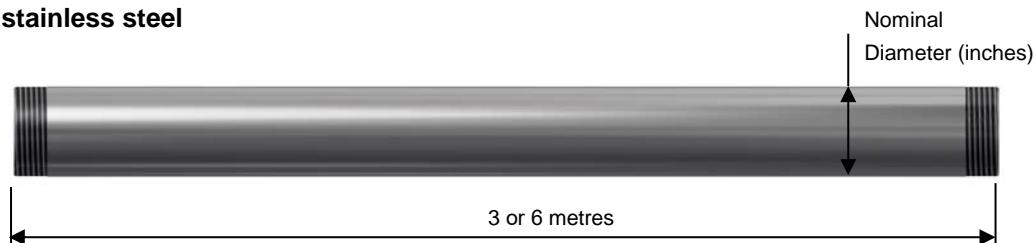

**Carbon Steel  
304 stainless steel**

		Nominal diameter - inches								
Carbon Steel	Sch 40	4"	5"	6"	8"	10"	12"	14"	16"	18"
Stainless Steel	Sch 10	4"	5"	6"	8"	10"	12"	14"	16"	18"
Flange OD (mm)		160	190	235	270	336	412	440	580	640
Standard length		3 or 6 metres								

### Threaded Column

**Carbon Steel  
304 stainless steel**

		Nominal diameter - inches						Collar material
Carbon Steel	Sch 40	4"	5"	6"	8"	10"	12"	Carbon Steel
Stainless Steel	Sch 40	4"	5"	6"	8"	10"	12"	Bronze
Collar OD (mm)		126	155	180	250	295	360	
Thread		8 TPI						
Standard length		3 or 6 metres						

Carbon steel external surfaces are painted in bituminous black paint for corrosion resistance

Threaded columns use industry standard thread pitch, right hand. Left hand available as an option

Submersible column has a notch in the flange to allow for the drop cable

TPI = Threads per Inch

## Minimum Submergence

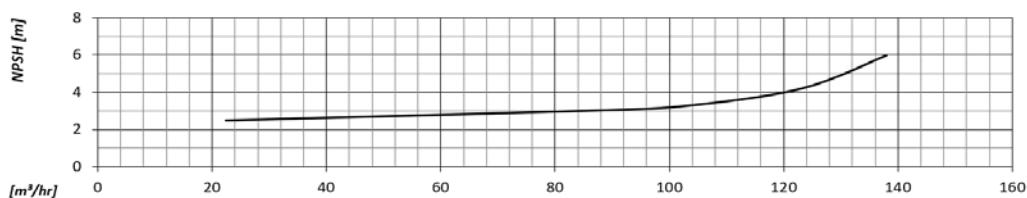

A submersible borehole/well pump must be submerged at all times.

The pump suction intake must be sufficiently submerged to prevent cavitation and avoid the formation of vortexes being created on the liquid being pumped.

When a vortex forms, this can cause air to mix with the water being pumped, causing possible cavitation and reduce the pump capacity and can lead to internal damage of the impellers and bowls.

To avoid free surface vortex formation, you would use the minimum submergence figure recommended by the manufacturer in their charts.

An approximate way to determine the submergence value for a submersible turbine pumps can be based from the NPSH curve;

Identify the flow rate you require and go up the graph to the NPSH curve/line.

**Examples:**

At the nominal flow rate of 80 m³/h the NPSH is 3 metres.

Now use the 3 metres and subtract atmospheric pressure of 9.81 metres.

The result is a negative figure which is not acceptable for a pump intake.

$NPSH(M) - G(M) + 1M = \text{minimum submergence}$

$NPSH_r$  = Net Positive Suction Head required.  $G$  = head of atmospheric pressure.  $M$  = metre

If the value calculated is less than zero metres, for our submersible pumps we would recommend a minimum submergence 'Y' of 1 metre.

If the value calculated is above zero, use that figure and add 1 metre

Example: If the NPSH curve shows 12 metres, subtract 9.81 metres which equals 2.2 metres, so the recommended minimum submergence 'Y' would be 3.2 metres. In our charts we would likely state 'Y' as being 3.5 or even 4 metres.

**Note:**

Minimum submergence is considered from the bottom of the suction strainer for submersible pumps and from the bottom of the suction bell for vertical line shaft turbine pumps.
