

## PVC FILM

PVC films play an important role in keeping fresh food healthy and fresh, protecting consumers by keeping their fresh food from early spoilage and free from contamination. They are universally recognised as one of the best packaging products for the food and beverage industry. It offers users excellent product presentation and clarity, unsurpassed physical properties including heat tolerance, controllable gas and moisture vapour transmission capabilities and exceptional sealing performance.

Integrated Packaging's PVC quality product innovations improve the freshness and shelf life of these products whilst meeting and exceeding the highest international food safety standards.

One of our many innovations with our range of Australian made PVC films was the removal of phenol and phthalate based additives as soon as they were identified by the European Union as substances of concern to human health. We have led the Australian market in finding safe alternatives to these materials that still retain the clarity, strength and cling characteristics that our films are chosen for. We don't use Palm Oil or BPA in our films either, as part of our environmental and food safety stewardship commitment. This approach contrasts with other PVC film suppliers, some of whom use lower cost plasticisers that could risk the health and well-being of people consuming foods wrapped with those products.

Integrated Packaging PVC cling films are highly transparent and glossy, have exceptional anti-fog properties and good moisture and oxygen transmission rates to ensure fresh food products maintain excellent visual presentation over an extended shelf life. Our film's high strength provides added protection to reduce spoilage and wastage from consumer mishandling, while the superior cling properties eliminate pack leakage.

Our Produce (Vegetable & Fruit) Films range offer a variety of sizes and gauges and are suitable for automatic, semi-automatic and manual over wrapping machines. Specific films can be manufactured to individual requirements in varying roll widths and gauges to suit custom applications.

Our range of films cater to the meat, seafood and poultry market sectors and are suitable for automatic, semi-automatic and manual over wrapping machines, depending on customer requirements. As part of our ongoing development, we can now offer a specially formulated film specific to the mushroom industry. Our Meat Film range also includes heavier gauge Bone Guard and Clear Guard and all of our films can be perforated to specific sizes.

IPG are the leading supplier to markets in Australia with our quality Australian Made film having an outstanding reputation for reliability and performance. ISO Certified and HACCP Accredited, Integrated Packaging PVC Food Films meet the highest standards of quality and service benefiting from over 50 years of manufacturing experience.
