Evacuation sheet

Ensuring patient safety during an emergency

Saving the life of a patient during an emergency.

There's a fire in your department. Everyone is panicking. You need to evacuate. A bedridden patient needs your help. In this type of emergency situation, speed and simplicity are of the utmost importance. In order to tackle this scenario in an effective way, and bring the patient quickly to safety, we developed the evacuation sheet, the **S-CAPEPOD**. We created this tool at the request of a psychiatric hospital in Eindhoven, The Netherlands. They encountered a challenge, as an evacuation with beds would completely block hallways and limit access to the stairwell. A unique sheet design was chosen for the **S-CAPEPOD**. The sheet is permanently mounted between the frame of the bed and the mattress. By means of flaps, which you can pull around the mattress, you can encompass the patient in the evacuation sheet while still on the mattress. Within 30 seconds, the patient is ready for an evacuation. Now you can move the patient with ease. The mattress provides optimal support and protection for the patient.

Many safety professionals, at home and abroad, opt for the speed and simplicity of the **S-CAPEPOD** in order to ensure the safety of their patients. The **S-CAPEPOD** ensures that you have a simple tool at your disposal to evacuate patients. For the evacuation of bariatric patients (up to 661 lbs), you can use the Bariatric **S-CAPEPOD**! Bariatric S-CAPEPOD has a slightly different design than the regular S-CAPEPOD.

S-CAPEPOD suits these mattresses:	Width: 31" - 38" Max. length: 85"
Bariatric S-CAPEPOD suits:	Width: 40" - 49" Max. length: 85"
Carrying weight S-CAPEPOD:	264 - 330 lbs
Carrying weight Bariatric S-CAPEPOD:	661 lbs
Weight S-CAPEPOD:	2.425 lbs
Weight Bariatric S-CAPEPOD:	5.51 lbs
Material:	Fire-retardant & anti-bacterial Trevira CS yarns (polyester)

Who also uses the S-CAPEPOD?

What do you need to know?

- Equipped with an anti-microbial function
- Permanently placed beneath the mattress
- Flame-retardant material
- Strong hook and loop fasteners
- Washable

📖 The Sint-Maartenskliniek decided to equip all their 265 beds with an S-CAPEPOD. There are comparable products on the market, but the S-CAPEPOD fulfilled all the requirements. [Bolhuis, Safety Manager, Sint-Maartenskliniek](#)

Evacuating with the S-CAPEPOD system goes three times faster than without an evacuation device.
