

POST MOUNT ENCLOSURES FT SERIES

HMA Geotechnical are proud to introduce our new custom manufactured enclosures designed with a double layer protection of hot dipped galvanised steel and RAL 7035 outdoor coating.

These enclosures are a cost effective solution for all weather conditions in the field.

Sizes Available: 300mm x 300mm x 210mm
400mm x 600mm x 200mm

FEATURES

- Enclosures are surface treated with a hot-dip galvanised steel (GI) coating, before coating with UV resistant Polyester powder coat.
- All holes in our enclosures are made BEFORE the coating process, therefore all cuts are treated unlike standard enclosures which will have untreated steel after the holes are made.
- Our enclosures include metal locks instead of the cost cutting plastic style.
- 50mm galvanised steel post and flange mount.

SPECIFICATIONS

Single-Door, IP66, RAL7035 Outdoor

Construction

- Door: 1.5mm - 1.8mm Mild Steel
- Body: 1.2mm Mild Steel
- 2mm galvanized steel mounting panel
- High quality automatic seamless foam-in-place gasket
