

Silicone Masks Consumables and Accessories

Making hospital stays as comfortable as possible for patients is our common goal. To effectively enhance patient comfort our silicone masks are made of medical grade silicone that has superior ability to conform to the patient's anatomy.

Benefits

Silicone Masks

The medical grade silicone is resistant to high or low temperature and durable. Our silicone masks can be autoclaved and thus, they can be reused on multiple patients.

There are different mask designs available. The smaller sizes (sizes 00-2) have a rather round shape in order to provide a comfortable fit and an effective seal for infants with more round shaped face contours. The bigger sizes (sizes 3-5) have an anatomically formed teardrop shape to ensure a convenient fit and seal to more adult patients' facial characteristics. The silicone masks have a flexible, soft, and transparent mask body.

The mask body design allows for a comfortable rest of the thumb. The form and material create an easy grip for the physician. The transparent mask body allows for continuous visual observation of the patient's condition.

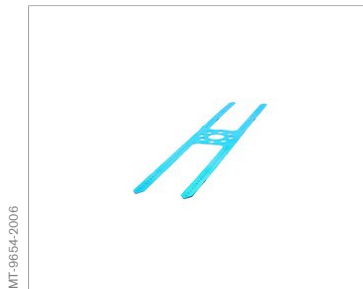

Easy application is supported through additional mask accessories such as hook rings and headgears for fixation. Two different headgears in small and large designs offer patients and physicians a soft and elastic support and holding position.
