# Industrial Network Solutions - µMAXB

# **Rugged 10-port Gigabit Switch** with two 10Gbit ports (copper and/or fiber)

### **General Description**

The fanless µMAXBES comes with 8-ports 1Gbit and 2-ports 10Gbit speed. The open frame version offers for the 1Gbit ports lockable headers. The 10Gbit ports can be equipped with RJ45 or SFP connectors. All ports have status LEDs, indicating the activity and speed of each port.

The µMAXBES solution is extremely compact, its size is only 115 x 95 x 30mm (237 gramm) and can be used as open frame solution or in a MIL housing with connectors of your choice. Supply power is 5-36VDC and uses less than 6W (8x 1Gbit copper links and 2x 10Gbit SFP+ fully operational). The product can be operated at -20°C to +60°C and optionally an extended temperature -40°C to +85°C version is available.

For the fiber ports, most Ethernet compatible transceivers (acc. MSA) can be used. It allows the users to select the appropriate transceiver for each link. In the same size as the SFP+ carrier, a copper RJ45 carrier is available. The µMAGBES can be equipped with 2 carriers (2x copper or fiber, or 1 of each). The copper carrier supports 100Mbit, 1Gbit, 2.5Gbit, 5Gbit and 10Gbit. The SFP+ carrier supports 1Gbit and 10Gbit SFP.

As managed switch, the product gives access to various switch settings to configure features like: Quality of Service, VLAN, Rapid Spanning Tree, to mention just a few. To adjust these switch settings, MPL provides an easy to use web interface.

### Key features are:

- Two 10Gbit ports to be used with SFP+ and copper
- Copper or mixed copper/fiber versions
- Header versions for the 1Gbit ports
- Wide input 5-36VDC
- Fully manageable over Web interface or Telnet
- Fanless operation
- IEEE802.1AS gPTP support
- Optionally CLI via USB

### These features make

the µMAXBES ideally suited for any rugged or industrial network applications. Due to the low power consumption, robust and flexible design, the products are well suited for any embedded system. It is the perfect fit, whether they are used in a rugged, hot or other harsh environment. The µMAXBES makes it easy to set up a challenging network!

All MPL products are 100% designed and manufactured in Switzerland.
