

MARCO SelectMaster®

An innovative weighing solution ideally suited for the Fresh Produce industry

100% MARCO designed and built, with all software written by our in-house development team.

The user-friendly SelectMaster deskills the packing process, removes guesswork, increases packing speeds and reduces overpack.

The SelectMaster, consists of twelve weighing pans and will select which scale pans offer the best combination to reach the required weight from the available product, instantly and accurately, virtually eradicating giveaway, increasing line speed and overall productivity.

By automatically highlighting the best combination available it can significantly speed up the packing process, whilst maintaining quality.

The use of visual guides makes the packing process seamless and simple to use meaning very little training is required.

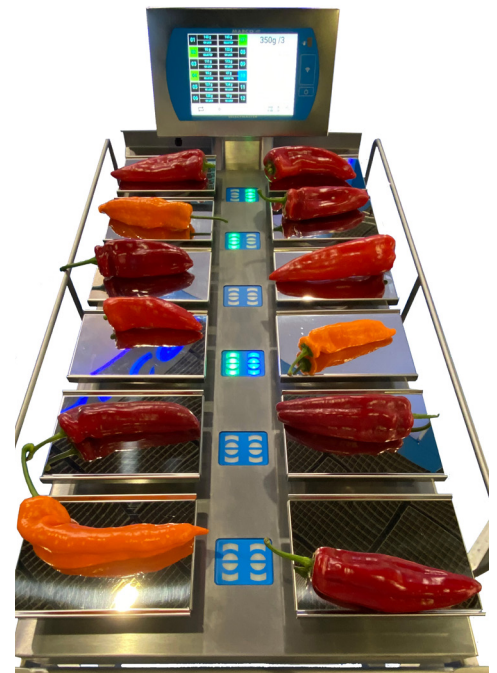

The SelectMaster is the perfect solution for a wide variety of fresh produce including vegetables, meat and fish.

By using the best combination available it reduces the need to

trim product and maintains the optimum quality required for the final pack.
