eATM tManager® for ControlLogix®
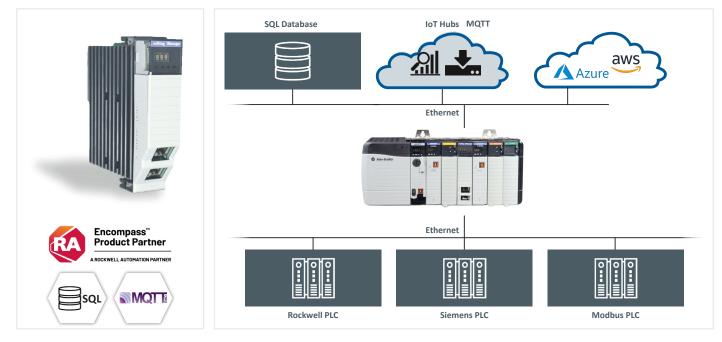

Connect ControlLogix PLCs to analytics and dashboards in about 10 minutes

- Collect information from islands of PLCs and connect natively upstream to SQL databases and cloud for analytics, dashboards, and process optimization
- In-chassis PLC module, no PC in the middle, no coding, no OPC translation
- Most direct method to connect PLCs (OT) directly to IT business apps for analytics, dashboards, and digital transformation

Easy and Fast PLC Connectivity to Analytics

tManager digital transformation solution enables PLCs to connect to IT dashboards, analytics, business metrics, or applications like track & trace, high speed sorting, and recipe management to optimize business processes

No coding, no PC in the middle, no OPC protocol translation. Just easy-to-use menu-driven selections.

- Natively browse Logix tags and natively connect to SQL, ORACLE, AWS using AWS IOT core, and AZURE using IOT Hub
- Collect data from Rockwell, Siemens or Modbus controllers, then connect upstream to analytics
- Access all leading cloud platforms using MQTT

Rock Solid Security

- In-chassis module, no anti-virus updates, no security patches
- Configure with software, then disconnect software during runtime
- No access to SQL code, so editing and creation of malicious SQL commands not possible
- Support for AWS and Azure certificates and SQL encryption

Robust Data Handling

- In-chassis industrial PLC module that's built for the OT environment, and replaces the PC that's not
- No need to modify PLC logic to read tags such as monitoring key performance indicators
- Eliminate data loss through use of store and forward (local buffering) and redundancy using failover server
- Time-stamped data and logs saved of all transactions for audit
- E-mail notifications, Logix status tags, for transaction status and system operation
