

# HBB-90DF Cordless Rebar Bender

Innovators in  
Precision Rebar  
Bending Tools  
& Equipment

**MADE IN  
JAPAN**

The HBB-90DF cordless rebar benders have been specially designed to bend 13mm high tensile rebar to 90 degrees for starter bars within concrete formwork. These rebar benders are expertly designed for cordless operation and comply with WH&S requirements for the rebar manufacturing & construction industries.

This bending tool develops up to 600 bar output from the radial hydraulic pump, powered by Makita's advanced LX DC motor along with their reliable 18V Li-Ion rechargeable batteries.

The HBB-90DF cordless rebar benders are suitable for various remote applications in the construction industry and are used by steel fixers needing to efficiently bend rebar within the formwork and bend starter bars with ease after the pouring of the slab or footings.
