

ELIMINATE INDOOR ODOUR AND GERMS AT THE SOURCE

Leave your classrooms smelling fresh, clean and germ free

In enclosed spaces such as classrooms, micro-organisms create offensive odours, spread germs and compromise hygiene standards. Traditional cleaning methods and masking agents are not enough. Immediately after the interior is cleaned harmful micro-organisms return and grow at a rapid rate. Odours prevail and the smell increases even after extensive cleaning

Odours and infections are created by bacteria, viruses, mould, fungi and volatile organic compounds found in the air and on surfaces.

Regular cleaning, disinfecting alone and use of masking agents cannot control the spread of micro-organisms. In eight hours, a single bacteria cell can multiply to over 8 million, meaning odours prevail and health risks increase even after traditional cleaning

PERFECT SOLUTION FOR:

- All types of classroom surfaces
- Lingering odour
- Germ elimination
- Replacing chemicals
- Reducing risk of infection

BENEFITS

- Rapid removal of odours by treating the root cause
- Removes bacteria on all exposed surfaces
- Effective against mould, fungi and Volatile Organic Compounds including Ammonia found in cleaning chemicals
- Stops microbes reforming by eliminating the food source

1 litre concentrate makes 200 litres
