## Product Information Sheet

# Absorb Coffe Dam

The Absorb Coffe Dam is a twin tube water inflated boom made from a UV stable, heavy-duty, polymer-based material. It is used for **temporary damming of creeks and waterways**, providing water collection and diversion from high pressure cleaning operations. It also allows for **containment of most general liquid spills**, including firewater and sewage.

The Coffe Dam is **typically custom made in both diameter and length** to suit the application and it will enable you to meet the current regulations regarding containment and disposal of wash water.

### Features

- Rolls up into compact size for storage or transport
- Custom made to suit application
- Portable and reusable containment device

### Product Code:

AES COFFER DAM
