

The future is oblique. Together with our customers, we face the enormous challenges and demands of the market. The patented bending system of Variobend offers a unique selling point and a hitherto unprecedented profile diversity.

PRODUCTS

VARIOBEND DOUBLE BENDER

The advantages of Variobend up and down bending technology are especially great when bending long and heavy bending parts. The high time for the tossing and turning long flashings is considerably reduced by Variobend double bender. In addition to a significant increase in productivity and safety above all the flexibility and diversity profile enhanced by the folding beam inclined with its exceptionally large space.

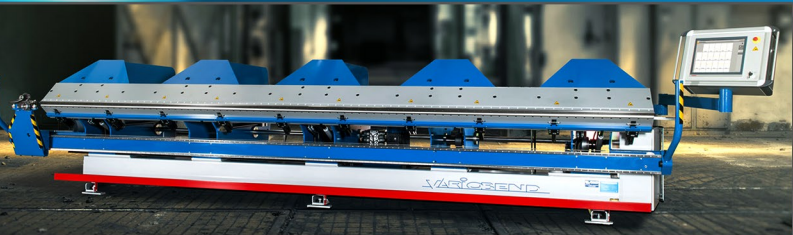

Who wants to make flashings in 6 m and 8 m working length highly efficient, precise and with high repeatability, can not avoid the doublebender Variobend the model DB.

VARIOBEND LONG LENGTH FOLDER

Long length folder model EB to 3.00 mm. The machines are available in a length of 4 - 12 m and a bending capacity of 1.50 mm - 3.00 mm steel sheet available. The machine impresses with its slanted backward bending beam, which ensures, with its large open space an extraordinary profile variety and flexibility. The control shaft of the clamping cheek ensures a smooth closing and controlled Flattening of Wasserfalzes. Very high working speeds guarantee a high efficiency during bending and ensure short production cycles.

Variobend Long length folder the EB series can be optionally equipped with tapered depth stops, photoelectric protection, high strength segments for bending and clamping cheeks, brush tables and insertion depths of up to 1,250 mm.
