LM-SYSTEM STORAGE SYSTEM

The LM-System consists on custom-made racks, with the possibility of expanding the storage installation, according to the needs of each client.

Each individual storage location has one or more sliding supports inside (depending on the bending of the material) on which the stored material rests.

Single rack system

Two racks systems facing one another

Single rack system

STORAGE METHODS

CONTAINERS

They are located within the storage system and are recommended for material that bends a lot, leftovers and delicate material that can be scratched or contaminated.

There are two types: fully plated & profiled. The containers can be divided to store several references within the same space.

- A. System with profiled containers
- B. System with fully plated containers

UPPER STORAGE AREA

Optimizing the total capacity of your facilities, the upper part of the rack can be used as an extra storage surface.

Enables the storage of: containers, pallets, sheet metal coils, 12 meter / 40 ft long bundles or other materials.

100% CUSTOM MADE

We adapt our systems to your facilities based on your needs.

SETTINGS

Size:

From 3 up to 15 meters

From 10 ft up to 50 ft

Weight:

From 500 up to 6.000 kg (per location)

From 1000 lb up to 14000 lb (per location)

Storage height:

1,8 m - 5 m / 6 ft - 17 ft

Possibility of combining different sizes and weights.

STORABLE MATERIAL

- Ideal for metals such as steel, iron, aluminum, stainless steel, copper or titanium, and all types of plastic materials.

AUXILIARY DEVICES FOR HANDLING

Depending on the volume to be handled, the number of movements necessary and the space available in the warehouse, we can offer different alternatives.

AUXILIARY DEVICES FOR HANDLING

1. External Suport 2. Pallet truck 3. Forklift
4. Wagon 5. Hydraulic Platform 6. Electric platform with crane
7. Integrated crane 8. Autonomous platform.
