Product Information Sheet

Absorb Hazchem Pads

The Absorb Hazchem pads are a highly useful tool in spill response. Each pad is made from specially treated polypropylene which are able to soak up small to medium sized spills. Most aggressive chemicals do not affect these pads, which are able to absorb most strong acids and oxidising agents.

These Hazchem pads are ideal for an immediate response for most liquid spills, including hazardous chemicals, water-based liquids or hydrocarbon liquids.

Tips:

- Use appropriate PPE for handling hazardous spills, feel free to give us a call if you are unsure
