

# USAR Training Dummy

URBAN SEARCH AND RESCUE

**LifeTec**  
Rescue Training Dummies

Designed specifically for Urban Search and Rescue (USAR) training, but the dummy has many other applications. Strong enough to be buried under concrete, driven over by a 4X4, dropped from a 2nd floor window onto concrete with no damage - these dummies are tough!

Now constructed in the same polyester used in Police ballistic / stab vests, which typically has 4 times the strength and abrasion resistance of 16oz canvas or PVC (the materials previously used) - making the dummies much stronger than previous models.

In our opinion, our optional ShoutBox and hood fitted to any LifeTec model is a far more versatile and cost effective option than the USAR 'smart dummies' from some of our competitors. The optional hood can be fitted to any of our dummies in seconds, so when its not needed, it does not need to be fitted.

## Features and Benefits

- The polyester is waterproof, making it suitable for wet or foul scenerios such as Hazmat / CBRN as it can be more easily cleaned and dried than the canvas models.
- Anatomically correct weight distribution gives the 'feel' of an unconscious person.
- Uses the same construction methods as the best selling General Duty range.
- Built in cavity for the ShoutBox.
- Strong webbing loop allows easy positioning, storage and hanging up for drying.
- Strong enough to be buried under concrete or steel lintels with no damage - these dummies are tough!
- Can withstand being driven over by a 4X4 vehicle and being dropped from a 2nd floor window onto a concrete floor with no damage (obviously care must be taken with the ShoutBox).
