Water at the right temperature provides optimal warming

The Kanmed° BabyBed is modern, practical and made for the care of newborn and premature babies in medium and low intensive care situations. The BabyBed was developed together with healthcare professionals to ensure a high level of ergonomics. Kanmed° BabyBed gives you unique push down side walls, ease of use and is very easy to clean. The Kanmed° BabyBed is manufactured in Sweden and comes with 5 years limited warranty.

The Kanmed° bed is often used with the Kanmed° BabyWarmer creating the Kanmed BabyWarming System. With the Kanmed° BabyWarming System you will need fewer incubators and reduce the overall costs. The Kanmed° BabyBed has a unique selection of options and accessories. By selecting models and accessories you will get the bed that fits your needs.

KANMED^o BABYWARMER

It is the soft warm Water Mattress that makes the Kanmed Baby Warming System unique.

The Kanmed Baby Warming system is the most baby friendly way to care for your babies. Only a soft warm water mattress can substitute the warming efficiency of a modern incubator. When the baby is stable and the skin has matured it can be moved to the open Kanmed Baby Warming System. Parents can now easily get involved and practice the care of their new-born or premature baby.

The important parent baby bonding and breast feeding is now much simpler. The Kanmed Baby Warming System is used in hospitals worldwide as a safe, cost effective and baby friendly alternative to continued treatment in the incubator. Thereby the amount of incubators required can be reduced saving money for other investments in the Neonatal Unit. The system is well documented in published medical studies.

More than 10 000 units in use worldwide that have warmed more than 2 million babies
