

Designer's Choice T type Coverplate EJs

Designer T: This coverplate system is designed to house floor-finishes up to 16mm thick. The installed system presents minimal visual impact. Traditional recessed-coverplate EJ systems are quite deep and wide. They need large concrete rebates which can be difficult to achieve. DzT requires a substantially smaller concrete recess. It can house a range of floor finishes, and accommodates substantial movement. Suitable applications are tiles, terrazite, vinyl, carpet and epoxy floors..... in buildings such as convention centres, shopping malls, airport terminals, hotels, museums. The system is supplied assembled.
