Standard Heights (Static Bays)	Standard Widths:	Standard Depths:
1880mm, 2200mm	914mm, 1219mm, 1524mm,	457mm, 610mm

How Silver Ion Technology Works

Silver ions embedded in the material substrate are released via ambient moisture and enter the cell membrane

Silver ions destabilise cell membrane, stop respiration and inhibit cell division, whilst blocking the replication of DNA

What is Steritouch® Coating?

SteriTouch® is an Antimicrobial & Antibacterial light grey powder coat applied to our wire shelving range.

Protecting yourself, products and patients against bacteria, algae and mould has never been easier. The antimicrobial properties of ionic silver will work continuously for the lifetime of the coating to deliver protection against infection-causing bacteria such as MRSA, E.Coli and Salmonella.
