## SENSOR-ACTIVATED FIRE EXTINGUISHING (S.A.F.E.) SYSTEM

### S.A.F.E. DRYER - SAFER LAUNDRY - SAFER STAFF

While we all think it won't happen to us, dryer fires are a common occurrence in commercial and industrial laundry settings.

Often caused by flammable oils or spontaneous combustion, dryer fires can cause devastating damage to not only your dryer, but the entire laundry room, and the building if the fire manages to spread – often putting not only property but also lives at risk.

Partnering with American Dryer Corp, as part of the Maytag Commercial laundry family, Dependable Laundry Solutions is proud to supply Australia wide, the ADi Range of industrial dryers, all with S.A.F.E Fire Suppression as standard.

Using sensors built into the dryer tumbler, the S.A.F.E. system is a unique, controlled extinguisher that automatically detects fires in the dryer, immediately dispenses water to extinguish it, then shuts itself down, eliminating the fire, as well as unnecessary water damage and clean-up.

Industrial Dryers with the S.A.F.E. system are simple and inexpensive to install - just run a cold-water line to the dryer. You can even use the water supply from your washers.

That's all it takes to protect your laundry facility—and you may even reduce your insurance costs in the process!
