Portable Smart Rising Seat

SitnStand

As we get older or have a disability the task of sitting down and then getting up again is difficult without assistance. The SitnStand is designed, with a push of a button, to inflate, and achieve a similar rising effect as the Riser Recliner but it is portable and lightweight.

The SitnStand can be used on your current chairs or sofa, so need to swap out your existing furniture.

Comfortable:

Comfort is essential.

When fully deflated (level 0), you will still feel like you are sitting on your favourite chair.

The cushion seat cover is removeable and machine washable.

Portable and Lightweight:

Weighs only 3 kgs including the carry bag with strap, battery and charger. Easy to switch between chairs around the house or take with you if leaving the house. When in the carry bag - is about the size of a large briefcase.

Weight Limit:

Lifts up to 120kgs.

The SitnStand has 4 chambers and can inflate to various heights - allowing for the different heights of people and of chairs.

Function:

Is controlled with a simple up / down button that allows you to inflate it to 4 height levels, according to your height and that of the chair.

Comes with a rechargeable battery, capable of working for a week (80 - 90 inflated rounds).

Overnight charging takes 4-6 hours.

Take with you and use on any chair. Works just like the riser recliner except its portable.
