Westlab Digital Stirred Water Baths

Westlab's Stirred Water Baths feature a digital PID temperature controller and are designed for immersion of flasks, bottles and racks in an accurate temperature environment throughout the water bath. The stainless-steel tank is housed in a sturdy outer case and is supplied complete with a stainless-steel shelf which provides even water circulator and temperature stability.

The painted surfaces feature a tough antibacterial finish with good chemical resistance. Easy to use controls which are wipe clean and have an antibacterial finish. Immersed components are corrosion resistant. The efficient stirrer is quiet in use and provides excellent temperature stability. Indication of heating, over temperature alarm and timer running.

When a low liquid level is detected a "FILL" message automatically appears and heating is suspended. Once refilled, heating is restored, and temperature control resumes automatically. Over and under temperature alarms automatically protect samples in the water bath.
